This volume showcases the most exciting new voices in the fields of business and political history. While the media frequently warns of the newfound power of business in the world of politics, the authors in this book demonstrate that business has mobilized to shape public policy and government institutions, as well as electoral outcomes, for decades. Rather than assuming that business influence is inevitable, the chapters explore the complex evolution of this relationship in a wide range of different arenas--from attempts to create a corporate-friendly tax policy and regulations that would work in the interests of particular industries, to local boosterism as a weapon against New Deal liberalism, to the nexus between evangelical Christianity and the oil industry, to the frustrations that business people felt in struggles with public interest groups. The history that emerges show business actors organizing themselves to affect government in myriad ways, sometimes successfully but other times with outcomes far different than they hoped for. The result in an image of American politics that is more complex and contested than it is often thought to be. The essays represent a new trend in scholarship on political economy, one that seeks to break down the barriers that once separated old subfields to offer a vision of the economy as shaped by politics and political life influenced by economic relationships.

Special edition of the Federal Register, containing a codification of documents of general applicability and future effect ... with ancillaries.

An essential American dream—equal access to higher education—was becoming a reality with the GI Bill and civil rights movements after World War II. But this vital American promise has been broken. Christopher Newfield argues that the financial and political crises of public universities are not the result of economic downturns or of ultimately valuable restructuring, but of a conservative campaign to end public education's democratizing influence on American society. *Unmaking the Public University* is the story of how conservatives have maligned and restructured public universities, deceiving the public to serve their own ends. It is a deep and revealing analysis that is long overdue. Newfield carefully describes how this campaign operated, using extensive research into public university archives. He launches the story with the expansive vision of an equitable and creative America that emerged from the post-war boom in college access, and traces the gradual emergence of the anti-egalitarian "corporate university," practices that ranged from racial policies to research budgeting. Newfield shows that the culture wars have actually been an economic war that a conservative coalition in business, government, and academia have waged on that economically necessary but often independent group, the college-educated middle class. Newfield's research exposes the crucial fact that the culture wars have functioned as a kind of neutron bomb, one that pulverizes the social and culture claims of college grads while leaving their technical expertise untouched. *Unmaking the Public University* incisively sets the record straight, describing a forty-year economic war waged on the college-educated public, and awakening us to a vision of social development shared by scientists and humanists alike.

This publication is concerned with two major current debates in public policy in all affluent societies. One is the widespread concern with the quality of the natural environment-the quality of air, water, land, and wilderness areas-which has expressed itself in the passage and implementation in recent years of a variety of environmental laws and regulations. A second debate concerns the adequacy of energy resources to meet the requirements of a growing economy. The requirement that industries must abate environmental pollution leads to increased costs of production and, in turn, to higher prices, falling output in those industries, and reduced employment and income in the region where such industries are located. There may be, at the same time, growth in industries that supply pollution abatement equipment and services in those or other regions. Over time, the health and economic benefits of higher environmental quality express themselves in changing patterns of consumption.

The success (and misfortunes) of the post-war Japanese economy has been one of the most debated points in modern

economics. Many explanations focus on cultural and institutional factors, and in particular the role of 'Informality' (networks organizing business activity and government policy). Adrian van Rixtel, an economist at the European Central Bank, provides a quantitative and qualitative assessment of Informality in the formation of Japanese monetary policy. Having been based in Japan for three years, two years of which were spent at the Institute for Monetary and Economic Studies at the Bank of Japan and the Japanese Ministry of Finance, he is able to bring a unique 'insider-outsider' perspective to the subject.

"The United States Code is the official codification of the general and permanent laws of the United States of America. The Code was first published in 1926, and a new edition of the code has been published every six years since 1934. The 2012 edition of the Code incorporates laws enacted through the One Hundred Twelfth Congress, Second Session, the last of which was signed by the President on January 15, 2013. It does not include laws of the One Hundred Thirteenth Congress, First Session, enacted between January 2, 2013, the date it convened, and January 15, 2013. By statutory authority this edition may be cited "U.S.C. 2012 ed." As adopted in 1926, the Code established prima facie the general and permanent laws of the United States. The underlying statutes reprinted in the Code remained in effect and controlled over the Code in case of any discrepancy. In 1947, Congress began enacting individual titles of the Code into positive law. When a title is enacted into positive law, the underlying statutes are repealed and the title then becomes legal evidence of the law. Currently, 26 of the 51 titles in the Code have been so enacted. These are identified in the table of titles near the beginning of each volume. The Law Revision Counsel of the House of Representatives continues to prepare legislation pursuant to 2 U.S.C. 285b to enact the remainder of the Code, on a title-by-title basis, into positive law. The 2012 edition of the Code was prepared and published under the supervision of Ralph V. Seep, Law Revision Counsel. Grateful acknowledgment is made of the contributions by all who helped in this work, particularly the staffs of the Office of the Law Revision Counsel and the Government Printing Office"--Preface.
