This insightful book analyzes the development of cross-border and cross-sector partnerships in a number of European cities and regions. Including, amongst others, Copenhagen, Budapest, Helsinki, Munich and Catalonia, these case studies shed light on the factors determining the success or failure of the coalition-forming process. Over the course of the nine case studies, the following questions are addressed:
- What forms of metropolitan and/or regional partnerships can be found? -

Experts estimate that as many as 98,000 people die in any given year from medical errors that occur in hospitals. That's more than die from motor vehicle accidents, breast cancer, or AIDS--three causes that receive far more public attention. Indeed, more people die annually from medication errors than from workplace injuries. Add the financial cost to the human tragedy, and medical error easily rises to the top ranks of urgent, widespread public problems. To Err Is Human breaks the silence that has surrounded medical errors and their consequence--but not by pointing fingers at caring health care professionals who make honest mistakes. After all, to err is human. Instead, this book sets forth a national agenda--with state and local implications--for reducing medical errors and improving patient safety through the design of a safer health system. This volume reveals the often startling statistics of medical error and the disparity between the incidence of error and public perception of it, given many patients' expectations that the medical profession always performs perfectly. A careful examination is made of how the surrounding forces of legislation, regulation, and market activity influence the quality of care provided by health care organizations and then looks at their handling of medical mistakes. Using a detailed case study, the book reviews the current understanding of why these mistakes happen. A key theme is that legitimate liability concerns discourage reporting of errors--which begs the question, "How can we learn from our mistakes?" Balancing regulatory versus market-based initiatives and public versus private efforts, the Institute of Medicine presents wide-ranging recommendations for improving patient safety, in the areas of leadership, improved data collection and analysis, and development of effective systems at the level of direct patient care. To Err Is Human asserts that the problem is not bad people in health care--it is that good people are working in bad systems that need to be made safer. Comprehensive and straightforward, this book offers a clear prescription for raising the level of patient safety in American health care. It also explains how patients themselves can influence the quality of care that they receive once they check into the hospital. This book will be vitally important to federal, state, and local health policy makers and regulators, health professional licensing officials, hospital administrators, medical educators and students, health caregivers, health journalists, patient advocates--as well as patients themselves. First in a series of publications from the Quality of Health Care in America, a project initiated by the Institute of Medicine

Cross-cultural experiences in university settings have a significant impact on students' lives by enriching the learning process and promoting cultural awareness and tolerance. While studying abroad offers students unique learning opportunities, educators must be able to effectively address the specific social and academic needs of multicultural learners. Exploring the Social and Academic Experiences of International Students in Higher Education Institutions is a pivotal reference source for the latest research on the issues surrounding study abroad students in culturally diverse educational environments. Featuring various perspectives from a global context on ensuring the educational, structural, and social needs of international students are met, this book is ideally designed for university faculty, researchers, graduate students, policy makers, and academicians working with transnational students.

One of the best-selling business statistics books on the market, Statistics for Business and Economics offers a solid, comprehensive, applications-oriented approach to business statistics. The success of this title has been two-fold: 1) the authors are well known and highly regarded in their field and 2) the book provides solid and sound methodological development. The discussion and development of each technique is presented in an application setting, with the statistical results providing insights to decisions and solutions to problems.-- The discussion and development of each technique is presented in an application setting, with the statistical results providing insights to decisions and solutions to problems.-- The use of abundant real data enables individuals to learn not only about statistical methodology, but also the application.-- Section on data sources has been expanded to include coverage for use of the Internet and scanner data.

Written to augment the author's earlier, extremely successful volume, Case Study Research: Design and Methods, the new edition of this applications book presents and discusses new case studies from a wide array of topics offering a variety of examples or applications of case study research methods. These applications demonstrate specific techniques or principles that are integral to the case study method. Through these practical applications, the reader is able to identify solutions to problems encountered during this type of research.

Contains information on a variety of subjects within the field of education statistics, including the number of schools and colleges, enrollments, teachers, graduates, educational attainment, finances, Federal funds for education, libraries, international education, and research and development.

Case Studies in Interdisciplinary Research successfully applies the model of the interdisciplinary research process outlined by author Allen F. Repko in Interdisciplinary Research, (SAGE ©2008) to a wide spectrum of challenging research questions. Self-contained case studies, written by leaders in interdisciplinary research, and utilizing best-practice techniques in conducting interdisciplinary research shows students how to apply the interdisciplinary research process to a variety of problems.
