Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, *Concepts of Biology* is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of *Concepts of Biology* is that instructors can customize the book, adapting it to the approach that works best in their classroom. *Concepts of Biology* also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

In her quest for global leadership in science and technology, the People's Republic of China has attained top ranks in the number of scientific publications, "hot papers," or national and international patent applications. However, analysis of the underlying structures and mechanisms is hindered by the sheer flood of data, stringent government control of all media, and ambiguities inherent in translation from Chinese. This book overcomes these difficulties and provides a concise picture of biotechnology-related research and development in China. It begins with brief accounts of China's geography, people, political and administrative structure, economy, finance, infrastructure related to science and technology, and educational system. It presents succinct accounts on structures and developments in biomedicine, diagnostics, agriculture, fermented food, bioindustry, and environmental biotechnology, with reference to government, industry, and academia. Finally, it predicts the next steps in Chinese biotechnology for the national agenda and, in view of China's ambitious global development strategy, the Belt and Road Initiative.
