Captured by History is an autobiography like none other in recent years, for few historians have interviewed as many men and women who helped shape the most momentous events of our century than John Toland. Here, for the first time, Toland reveals how he found these key players and how he persuaded them to talk to him. From disgraced Japanese generals to the German doctor who nearly succeeded in assassinating Hitler, Toland's sources are remarkable for what they reveal about their subjects. It was Toland's ability to listen, more than anything else, that persuaded those he interviewed to divulge secrets and stories they would tell no one else. Toland's unorthodox approach to history came from his early desire to be a playwright. Even before graduating from Williams College during the depths of the Depression, Toland spent his summers hitchhiking and riding the rails as a hobo. He lived and worked with other bindle stiffs, learning their lingo and ways. He served five short jail sentences for riding freights and trespassing. His experiences and the characters he met encouraged Toland to write plays and early novels (unsuccessfully) until 1957, when he published his first book, *Ships in the Sky*. His work in the next four decades was nothing short of extraordinary, for Toland found that he saw history as a play, with narrative structure and drama, not as a dry series of dates and names. The result was a series of landmark works such as *Infamy*, the *Rising Sun*, which won him the Pulitzer Prize for nonfiction in 1970 and reflected his ability, with the help of his Japanese wife, to open doors normally closed to Westerners in Japan; *In Mortal Combat*; *The Last 100 Days*; and his best-selling biography of Adolf Hitler. *Captured by History* is not only the summation of a lifetime of groundbreaking works, but the story of a man who through his historical investigations became a witness to many of the most catastrophic events of the twentieth century. A self-effacing man in person, Toland nonetheless comes across as having had a life as fascinating as the lives of the many historical figures he has interviewed. Written by one of our last witnesses to the terrible and deracinating conflicts that split the world asunder at mid-century, *Captured by History* is an astonishing personal story of a hugely inquisitive man who became a historian not by accident or design, but by fate; a man who succeeded in chronicling the most tumultuous events of our century.

During the year between July 1588, when the Spanish Armada set sail from Spain and July 1589, when the survivors of the English counterpart of this fleet, the little-known English Armada, reached port in England, two of history's worst naval catastrophes took place. A great deal of attention has been dedicated to the former and precious little to the latter. This book presents a full-scale account of an event which has been neglected for more than four centuries. It reconstructs the military operations day by day for the first time, taking apart the established notion that, with the defeat of the Spanish Armada, England achieved maritime supremacy and the decay of Spain began. This book clearly and in a rigorously documented fashion shows how the defeat of the English Armada counterbalanced that of the Spanish, frustrating England's intention of seizing Philip II's American empire and changing the tide of the war.

SharePoint 2007 Development Recipes offers a range of ready-to-use code recipes that provide the building blocks for solving many common SharePoint 2007 programming dilemmas. This practical, hands-on guide categorizes recipes by problem area, for example site management, event handlers, users, lists, and web parts, and source code is provided in both VB and C#. As well as providing an invaluable reference, Mark Gerow also includes clear, supporting guidelines to help you modify the code samples for the broadest range of applications. For each recipe you will find Background and design considerations Source code in both VB and C# Discussion of variations on the provided examples Cross-reference to core SharePoint classes If you find yourself asking, "How do I solve this SharePoint development problem?" you will find all the answers in Mark Gerow's supremely useful book.

Since the 1970's, microprocessor-based digital platforms have been riding Moore's law, allowing for doubling of density for the same area roughly every two years. However, whereas microprocessor fabrication has focused on increasing instruction execution rate, memory fabrication technologies have focused primarily on an increase in capacity with negligible increase in speed. This divergent trend in performance between the processors and memory has led to a phenomenon referred to as the "Memory Wall." To overcome the memory wall, designers have resorted to a hierarchy of cache memory levels, which rely on the principal of memory access locality to reduce the observed memory access time and the performance gap between processors and memory. Unfortunately, important workload classes exhibit adverse memory access patterns that baffle the simple policies built into modern cache hierarchies to move instructions and data across cache levels. As such, processors often spend much time idling upon a demand fetch of memory blocks that miss in higher cache levels. Prefetching—predicting future memory accesses and issuing requests for the corresponding memory blocks in advance of explicit accesses—is an effective approach to hide memory access latency. There have been a myriad of proposed prefetching techniques, and nearly every modern processor includes some hardware prefetching mechanisms targeting simple and regular memory access patterns. This primer offers an overview of the various classes of hardware prefetchers for instructions and data proposed in the research literature, and presents examples of techniques incorporated into modern microprocessors.

Nothing ever happens in Fayette, South Carolina. That's what Popeye thinks, anyway. His whole life, everything has just been boring, boring, boring. But things start to look up when the Jewells' Holiday Rambler makes a wrong turn and gets stuck in the mud, trapping Elvis and his five rowdy siblings in Fayette for who knows how long. Popeye has never met anyone like Elvis Jewell. He's so good at swearing he makes Uncle Dooley look like a harp-strumming angel, and he says "So what?" like he really means it. Then something curious comes floating down the creek—a series of boats with secret messages—and it sends Popeye and Elvis into the big world on the hunt for a small adventure. With a healthy helping of humor and the signature Southern

charm that has captivated children and critics alike, Barbara O'Connor's newest tale is a heartwarming look at the joy that can come out of being a Royal Rule Breaker, and learning to find one's own adventures. This title has Common Core connections.

How can the Father, the Son, and the Holy Spirit be distinct and yet identical? Prompted by the doctrine of the divine Trinity, this question sparked centuries of lively debate. In the current context of renewed interest in Trinitarian theology, Russell L. Friedman provides the first survey of the scholastic discussion of the Trinity in the 100-year period stretching from Thomas Aquinas' earliest works to William Ockham's death. Tracing two central issues - the attempt to explain how the three persons are distinct from each other but identical as God, and the application to the Trinity of a 'psychological model', on which the Son is a mental word or concept, and the Holy Spirit is love - this volume offers a broad overview of Trinitarian thought in the thirteenth and fourteenth centuries, along with focused studies of the Trinitarian ideas of many of the period's most important theologians.
