In recent years, analysts, researchers and environmental policy makers have been faced with a serious shortage of empirical data on environmental phenomena. In fact, the information gathered by various organisations has not yet been systematically classified into a consistent system of accounts. This book presents the results of a joint research effort by the Fondazione Eni Enrico Mattei and Italy's Central Statistical Office (ISTAT) to design a system of accounts for natural and environmental resources. The resulting environmental accounts can be integrated with the existing system of national accounts, in order to estimate the so-called 'green GDP' or 'net national product' (NNP).

The behaviour of market prices is a fascinating subject for researchers. Opinions vary substantially. from the view that prices accurately and quickly reflect relevant information to the other extreme that prices are not rationally determined and are hence to some degree predictable. This diversity of belief about the efficiency of markets is reflected in these proceedings of the NATO

Advanced Research Workshop on "A reappraisal of the efficiency of financial markets". The thirty-one workshop papers cover stock, currency and commodity markets. We are pleased to have contributions on markets in eleven NATO countries: Belgium, Canada, Denmark, France, Germany, Greece, Italy, the Netherlands, Portugal, the United Kingdom and the United States. The workshop papers thus provide a wide-ranging account of contemporary research into financial markets worldwide. The workshop was held at the Hotel do Mar, Sesimbra, Portugal from April 11th to April 15th, 1988. We record our gratitude to Jose Cabral for ensuring the smooth progress of the workshop. The generous financial assistance of NATO was supplemented by contributions from: The Chicago Board of Trade, Alianca Seguradora, Banco Comercial Portugues, Fundacao Luso-Americana Para O Desenvolvimento, Junta Nacional de Investigacao Cientifica e Tecnologica. We speak for all the workshop participants in expressing our thanks to all our sponsors, Rui M. Campos Guimaraes, University of Porto.

This book deals with the following issues: the analysis, estimation and assessment of alternated models of income distribution, the specification and evaluation of income inequality measures, the analysis and measurement of poverty and its rationale, the scope and methodological power of the social accounting matrix (SAM) in the analysis of the functional and personal distribution of income and the family income multiplier, the study of the source and reliability of income

distribution data, the decomposition of income inequality measures, the asymptotic distributions and inferential analysis of income inequalities, and an inquiry on the income distribution and income inequality of Eastern European Countries under socialism. New models on income and wealth distribution are specified and their corresponding properties and goodness of fit are discussed. A multivariate approach to the measurement of poverty is developed and applied, and a compact survey of the literature is presented. The book can be used as a text in advanced undergraduate and graduate courses dealing with the theory, model specifications, methods and applications of income and wealth distribution, income inequality and poverty assessment in measurement and the use of SAMs in the analysis of income distribution.

We are now living in a period of disillusion in the ability of economic policy to stabilise the economy. This is proven by the onset of severe world recession in the early 1980s and the inability to invert the negative phase of the business cycle under way in the industrialized countries in the early 1990s. The failure of old policies motivates the research into the causes of economic fluctuations and their measurement whose results are published in this volume

This book presents a collection of statistical methods and procedures to assess data coming from educational systems. The topics examined include: statistical methods for constructing composite indicators, applied measurements, assessment of educational systems, measurement of the performance of the students at Italian universities, and statistical modeling for questionnaire data. Other issues are the implications of introducing different assessment criteria and procedures to the Italian university system.

This book highlights a selection of the best papers presented at the 2016 SIEV conference "The Laudato sì Encyclical Letter and Valuation. Cities between Conflict and Solidarity, Decay and Regeneration, Exclusion and Participation", which was held in Rome, Italy, in April 2016, and brought together experts from a diverse range of fields – economics, appraisal, architecture, energy, urban planning, sociology, and the decision sciences – and government representatives. The book is divided into four parts: Human Ecology: Values and Paradigms; Integral Ecology and Natural Resource Management; Intergenerational Equity; and How to

Enhance Dialogue and Transparency in Decision-making Processes. Cities are where 72% of all Europeans live, and this percentage is expected to rise to 80% by 2050. Given this trend towards urbanization, cities are continuously growing, which also entails a growing risk of social segregation, lack of security and mounting environmental problems. All too often, today's cities have to cope with social and environmental crises, shifting the European urban agenda towards regeneration processes. Urban regeneration is more complex than merely renovating existing buildings, as it also involves social and environmental problems, inhabitants' quality of life, protecting tangible and intangible cultural resources, innovation and business.
