An urgent critique of the biopolitical subject and omnipresent Empire. Historical conflict no longer opposes two massive molar heaps, two classes—the exploited and the exploiters, the dominant and dominated, managers and workers—between which, in each individual case, it would be possible to differentiate. The front line no longer cuts through the middle of society; it now “runs through each one of us... “—from This Is Not a Program Traditional lines of

revolutionary struggle no longer hold. Rather, it is ubiquitous cybernetics, surveillance, and terror that create the illusion of difference within hegemony. Configurations of dissent and the rhetoric of revolution are merely the other face of capital, conforming identities to empty predicates, ensuring that even “thieves,” “saboteurs,” and “terrorists” no longer exceed the totalizing space of Empire. *This Is Not a Program* offers two texts, both originally published in French by Tiqqun with Introduction to Civil War in 2001. In *This Is Not a Program*, Tiqqun outlines a new path for resistance and struggle in the age of Empire, one that eschews the worn-out example of France's May '68 in favor of what they consider to be the still fruitful and contemporary insurrectionary movements in Italy of the 1970s. “As a Science of Apparatuses” examines the way Empire has enforced on the subject a veritable metaphysics of isolation and pacification, “apparatuses” that include chairs, desks, computers; surveillance (security guards, cameras); disease (depression); crutch (cell phone, lover, sedative); and authority. Tiqqun's critique of the biopolitical subject and omnipresent Empire is all the more urgent as we become inured to the permanent state of exception that is the War on Terror and to other, no less intimate forms of pacification. But all is not lost. In its unrelenting production of the Same, Empire itself creates the conditions necessary for the insurrection to come.

With *The Greek Girl's Story*, Alan Singerman presents the first reliable, stand-alone translation and critical edition of Abbé Prévost's 1740 literary masterpiece *Histoire d'une Grecque moderne*. The text of this new English translation is based on Singerman's 1990 French edition, which Jonathan Walsh called “arguably the most valuable critical edition” of Prévost's novel to date. This new edition also includes a complete critical apparatus comprising a substantial introduction, notes, appendixes, and bibliography, all significantly updated from the 1990

French edition, taking into account recent scholarship on this work and providing some additional reflection on the question of Orientalism. Prévost's roman à clef is based on a true story involving the French ambassador to the Ottoman Porte from 1699 to 1711. It is narrated from the ambassador's viewpoint and is a model of subjective, unreliable narration (long before Henry James). It is remarkably modern in its presentation of an enigmatic, ambiguous character, as the truth about the heroine can never be established with certainty. It is the story of the tormented relationship between the diplomat and a beautiful young Greek concubine, Théophraste, whom he frees from a pasha's harem. While her benefactor becomes increasingly infatuated with her and bent on becoming her lover, the Greek girl becomes obsessed with the idea of becoming a virtuous and respected woman. Viewing the ambassador as a father figure, she condemns his quasi-incestuous passion and firmly rejects his repeated seduction attempts. Unable to possess the young woman or tolerate the thought that she might grant to someone else what she has refused him, the narrator subjects her behavior to minute scrutiny in an effort to catch her in an indiscretion. His investigations are fruitless, however, and Théophraste, the victim of incessant persecution, simply dies, leaving all the questions about her behavior unanswered.

A practical handbook for programming directors, this guide focuses on achieving specific objectives in today's modern, competitive environment. Radio Programming is designed to convey underlying principles and to assist the programmer in accomplishing specific objectives, without mandating exact implementation methods. Instead, it empowers station management and the PD to implement strategies that will work for the particular format and market niche. Radio Programming will be helpful for neophytes in programming, experienced programmers seeking further growth, air talent seeking to develop skills, and general managers trying to understand programming and effectively manage program directors without stifling creativity. It will also help general managers hire effective programmers. Eric Norberg is the editor and publisher of the Adult Contemporary Music Research Letter and a radio consultant. He has worked as a program director at several radio stations, as on-air talent and general manager, and has also operated a radio production company. For fourteen years he has written a weekly column on radio programming for The Gavin Report, a radio trade publication.

Terrestrial Trunked Radio (TETRA) has become the tool to design any type of public security systems, in particular due to the strongly increased security demands for mobile systems. In this book, the authors show how TETRA can be strongly improved and these improvements will most probably be part of future TETRA standards. The areas examined include channel assignment and multiple access techniques, video transmission, wireless LAN integration, and the establishment of multiple wireless mesh networks. Since the requirements for these networks is security, the authors show that innovative techniques such as those based on chaotic signals can be used in order to

In 1581, Dr. John Dee, an advisor in the court of Queen Elizabeth I, began a series of experiments intended to explore the ability to contact the spirit world. With Edward Kelley acting as the medium in these experiments, Dee was able to record these communications as they were transmitted in Enochian -- the language of the angels. Donald Laycock has thoroughly analyzed the work of Dee and Kelley. In this volume, he recounts the history of their experiments. The rest of the work consists of a pronunciation guide for the twenty-one letters, significant to untangling both the meaning and the derivation of the messages handed down from Dee and Kelley, and a basic Enochian-English/English-Enochian dictionary. The result is a fascinating linguistic and magical mystery story, integral to any study of the Enochian tradition. Stephen Skinner's lucid Preface sets the tone and historical context for today's readers.
