Despite the enormous diversity and complexity of financial instruments, the current taxation of hybrid financial instruments and the remuneration derived therefrom are characterized by a neat division into dividend-generating equity and interest-generating debt as well as by a coexistence of source- and residence-based taxation. This book provides a comparative analysis of the classification of hybrid financial instruments in the national tax rules currently applied by Australia, Germany, Italy and the Netherlands as well as in the relevant tax treaties and EU Directives. Moreover, based on selected hybrid financial instruments, mismatches in these tax classifications, which lead to tax planning opportunities and risks and thus are in conflict with the single tax principle, are identified. To address these issues, the author provides reform options that are in line with the dichotomous debt-equity framework, as he/she suggests the coordination of either tax classifications or tax treatments.

This book provides students with a balanced perspective on business in a global environment, exploring implications for multinational companies in developed and emerging markets. This is the first text of its kind to emphasize strategic decision making as the cornerstone of its approach while focusing on emerging markets. This thesis analyzes the motivation and performance of 403 acquisitions made by emerging multinational corporations (EMNCs) in Western Europe and North America between 1994 and 2013. The findings indicate that most EMNCs were motivated to acquire in order to obtain access to the upstream and downstream know-how of their target firms. In addition, the thesis' event study results demonstrate that EMNCs on average generated value for their shareholders with their acquisitions over short periods around acquisition announcement. This result is particularly significant since similar studies on buying firms from developed markets have frequently come to the conclusion that acquirers destroy shareholder value.

The rapid growth in investment treaties has led to a burgeoning number of international arbitration decisions that have applied and interpreted treaty provisions in disputes between investors and states concerning their respective rights. This flurry of treaties and arbitral decisions has seen the creation of a new branch of international law- the law of investment claims. In this revised edition, Jeswald Salacuse examines the law of international investment treaties, specifically in relation to its origins, structure, content, and effect, as well as their impact on international investors and investments, and the governments that are parties to them. Investment treaty law is a rapidly evolving field and since publication of the first edition, the law of international investment treaties has both experienced considerable growth and generated extensive controversy. 2011 saw the highest number of new treaty-based arbitration filed under international investment agreements to date, and in July 2014, the Yukos Universal Limited (Isle of Man) v The Russian Federation culminated with awards of over US\$50 billion; a historic record for any arbitration. Controversy in this field has primarily revolved around the investor-state dispute settlement process, which as thus far involved at least 98 states as respondents. Salacuse captures these developments in this updated edition, examining not only the significant growth in treaties, but the trends that have followed, and their effect on the content and evolution of the law of investment treaties. Specific topics include conditions for the entry of foreign investment and general standards of treatment of foreign investments; monetary transfers; operational conditions; protection against expropriation; dispossession and compensation for losses; dispute settlement, including negotiation, arbitration, and conciliation; and judicial proceedings.

This timely and refreshingly real-world focused textbook examines some of the world's most critical policy issues through a macroeconomics lens. After presenting analytical foundations, modeling tools, and theoretical perspectives, Economics of Global Business goes a step further than most other texts, with a practical look at the local and multinational tradeoffs facing economic policymakers in more than fifty countries. Topics range from income equality and the financial crisis to GDP, inflation and unemployment, and, notably, one of the first macroeconomic examinations of climate change. The book covers long-run and short-run growth (with examples from the United States, China, the European Union, South Korea, Japan, Latin America, Africa, Australia, and Vietnam); financial crises and central banks; monetary and fiscal policies; government budgets; currency regimes; climate change and macroeconomics; income inequality; and globalization. Understanding the current state of affairs and tools available in the study of international finance is increasingly important as few areas in finance can be divorced completely from international issues. International Finance reflects the new diversity of interest in international finance by bringing together a set of chapters that summarizes and synthesizes developments to date in the many and varied areas that are now viewed as having international content. The book attempts to differentiate between what is known, what is believed, and what is still being debated about international finance. The survey nature of this book involves tradeoffs that inevitably had to be made in the process given the vast footprint that constitutes international finance. No single book can cover everything. This book, however, tries to maintain a balance between the micro and macro aspects of international finance.

Although each chapter is self-contained, the chapters form a logical whole that follows a logical sequence. The book is organized into five broad categories of interest: (1) exchange rates and risk management, (2) international financial markets and institutions,

(3) international investing, (4) international financial management, and (5) special topics. The chapters cover market integration, financial crisis, and the links between financial markets and development in some detail as they relate to these areas. In each instance, the contributors to this book discuss developments in the field to date and explain the importance of each area to finance as a field of study. Consequently, the strategic focus of the book is both broad and narrow, depending on the reader's needs. The entire book provides a broad picture of the current state of international finance, but a reader with more focused interests will find individual chapters illuminating on specific topics.

The publication of Alexis de Tocqueville's Democracy in America has kindled interest across disciplines to appraise the exceptional nature of U.S. activities. In general, however, all the published works have not focused their analyses from an economic point of view. While economics was for some a "dismal science" following Thomas Carlyle's characterization of Malthus' demographic model, it has increasingly become the "queen of the social sciences" for more practitioners. The book fills a gap in the literature by describing the American contributors as precursors and genuinely exceptional economists. We present their works within the state of the nation in which they advance their discipline. One is treated to both qualitative and quantitative theories in the opening chapter. Budding theories that became established theories of Economics and Finance are investigated in Chapters II and III. When President John Adams was confronted with M. Turgot's criticisms of the American government, he resorted to a historic survey of types of government from ancient Greece to the Middle Ages. Similarly, we have included a final chapter, Chapter IV, to present the argument for American Exceptionalism in the domain of Political Economy and Economic Law over the ages.
