The high-water mark of the muscle car era is usually credited as 1970, and for good reason; Chevrolet was now stuffing high-powered 454 engines into Chevelles. Adding a larger displacement above the still-available 396 (402) offered buyers the option to order the most powerful production car of that era. The 1970-1972 Chevelles remain the most collectible of the model to this day. Author and historian Dale McIntosh pairs with restoration expert Rick Nelson to provide this bible of authenticity on the legendary 1970, 1971, and 1972 Chevelle models. Everything about restoring your

Chevelle back to bone-stock is covered meticulously, including step-by-step instructions for chassis and interior restoration. Understanding date variances on parts applicable to the build date of your Chevelle is vital to a factory-correct restoration, and including them in this book provides a depth of coverage on these cars that is unequaled. Restoring a 1970-1972 Chevelle back to concours correct takes a certain amount of expertise. Thankfully, Rick and Dale have done a lot of the heavy lifting on the research side. With this authenticity guide, you can be confident that you have all the correct components and options accurately and expertly represented for your stock restoration. Project Mustang is a complete guide to restoring America's favorite muscle car, written by auto-restoration guru Larry Lyles, a regular contributor to Auto Restorer magazine. In this detailed 23-chapter volume, Lyles walks the car owner from the in-depth inspection of the vehicle and the beginning of the teardown to re-covering the seats and replacing the frame rail; and every step in between. The car restored for the project in the book is a 1968 California Special Mustang. The chapter titles themselves speak for what a straightforward DIY manual Lyles has written, as he details the step-by-step procedure of bringing a very cool rod back to life. Beginning the teardown, exterior and interior; repairing the sheet metal, door, and deck up; removing the major parts (driveshaft, engine, transmission, front suspension, steering system, etc.); removing old paint and replacing rust floors; no-weld rust repair; perfecting the metal; working with plastic body filler; priming and sanding; refinishing the components and underside, the door, interior, trunk, and body; wiring the car and installing the doors; applying the coatings, rebuilding the suspension, and installing the brake lines; installing the vinyl top cover, the headliner, and the glass; rebuilding and installing the engine; installing the front sheet metal, emblems, bumpers, stripes, carpet, and console; re-covering the seats; and replacing the frame rails. Each step in every chapter is photographed as the author progresses along, with captions to spell out exactly what has to happen. The book offers helpful advice about choice of tools and tips to make even beginners feel confident about tackling the many steps involved. With nearly forty years experience in repairing, rebuilding, and restoring classic cars (and lots of non-classic

ones!), Lyles emphasizes the reader's need to organize his or her project by determining the course of the project, researching suppliers, making lists of parts and their conditions, creating spreadsheets of estimated and actual costs, and photographing each component as a reference for later in case the restoration goes off track. Each chapter ends with a "notes" page for the reader to record his or her progress, making this manual a practical workbook as well. When the reader gets to the final pages of the book and reads the sections "Start the Engine" and "Test Drive the Car," there will be a true sense of accomplishment. An appendix of part suppliers and an index complete the book.
