"For the past two decades, Steven J. Davis, John C. Haltwanger, and Scott Schuh have studied the ebb and flow of jobs in U.S. manufacturing. Their surprising findings about where jobs are created and the frequency of job destruction have led to a body of journal articles and research by many other economists interested in the implications for modeling labor markets and comparisons to other industry and national settings. The authors now present this research in a single, up-to-date, and complete source with an explanation of their methods and a discussion of the usefulness of these concepts and measures for economic policy."--

Writing in the June 1965 issue of the *Economic Journal*, Harry G. Johnson begins with a sentence seemingly calibrated to the scale of the book he set himself to review: "The long-awaited monetary history of the United States by Friedman and Schwartz is in every sense of the term a monumental scholarly achievement--monumental in its sheer bulk, monumental in the definitiveness of its treatment of innumerable issues, large and small . . . monumental, above all, in the theoretical and statistical effort and ingenuity that have been brought to bear on the solution of complex and subtle economic issues." Friedman and Schwartz marshaled massive historical data and sharp analytics to support the claim that monetary policy--steady control of the money supply--matters profoundly in the management of the nation's economy, especially in navigating serious economic fluctuations. Even as the number of students attending college has more than doubled in the past forty years, it is still the case that nearly half of all college students in the United States will not complete their degree within six years. It is clear that much remains to be done toward improving student success. For more than twenty years, Vincent Tinto's pathbreaking book *Leaving College* has been recognized as the definitive resource on student retention in higher education. Now, with *Completing College*, Tinto offers administrators a coherent framework with which to develop and implement programs to

promote completion. Deftly distilling an enormous amount of research, Tinto identifies the essential conditions enabling students to succeed and continue on within institutions. Especially during the early years, he shows that students thrive in settings that pair high expectations for success with structured academic, social, and financial support, provide frequent feedback and assessments of their performance, and promote their active involvement with other students and faculty. And while these conditions may be worked on and met at different institutional levels, Tinto points to the classroom as the center of student education and life, and therefore the primary target for institutional action. Improving retention rates continues to be among the most widely studied fields in higher education, and *Completing College* carefully synthesizes the latest research and, most importantly, translates it into practical steps that administrators can take to enhance student success.
