This unique book closes the gap between psychology books and the research that made them possible. Its journey through the "headline history" of psychology presents 40 of the most famous studies in the history of the science, and subsequent follow-up studies that expanded their findings and relevance. Readers are granted a valuable insider's look at the studies that continue to be cited most frequently, stirred up the most controversy when they were published, sparked the most subsequent related research, opened new fields of psychological exploration, and changed most dramatically our knowledge of human behavior. For individuals with an interest in an introduction to psychology. How reliable is our intuition? How much should we depend on gut-level instinct rather than rational analysis when we play the stock market, choose a mate, hire an employee, or assess our own abilities? In this engaging and accessible book, David G. Myers shows us that while intuition can provide us with useful—and often amazing—insights, it can also dangerously mislead us. Drawing on recent psychological research, Myers discusses the powers and perils of intuition when: • judges and jurors determine who is telling the truth; • mental health workers predict whether someone is at risk for suicide or crime; • coaches, players, and fans decide who has the hot hand or the hot bat; • personnel directors hire new employees; • psychics claim to be clairvoyant or to have premonitions; • and much more.

One of the greatest classics of modern Western literature and science and the source of the ripest thoughts of America's most important philosopher.

Strive for a 5 Preparing for the AP® Psychology Examination provides a thorough review of psychology with essential tips for test preparation. You are likely familiar with the name Dr. David G. Myers. Now, he and his new co-author, Nathan DeWall, bring you a book that will allow you to use College Board's new Personal Progress Checks and Dashboard more effectively. This updated edition includes 100% of the new course content in the new nine-unit structure. All teacher and student

resources will also be updated to correlate to the new student edition; this includes the TE, TRFD, TB, Strive, and LaunchPad. Everything will publish in summer 2020 such that you can use this new program for Fall 2020 classes. If you're not familiar with Myers/DeWall texts, you are in for a treat! Drs. Myers and DeWall share a passion for the teaching of psychological science through wit, humour, and the telling of poignant personal stories (individually identified in the text by the use of each author's initials [DM and ND]). Through close collaboration, these authors produce a unified voice that will teach, illuminate, and inspire your AP® students.

"This book is designed to help students organize their thinking about psychology at a conceptual level. The focus on behaviour and empiricism has produced a text that is better organized, has fewer chapters, and is somewhat shorter than many of the leading books. The beginning of each section includes learning objectives; throughout the body of each section are key terms in bold followed by their definitions in italics; key takeaways, and exercises and critical thinking activities end each section"--BCcampus website.

From its beginnings to this remarkably fresh and current new edition, Myers and DeWall's Psychology has found extraordinarily effective ways to involve students with the remarkable research underlying our understanding of human behavior. But while the content and learning support evolves edition after edition, the text itself continues to be shaped by basic goals David Myers established at the outset, including to connect students to high-impact research, to focus on developing critical thinking skills, and to present a multicultural perspective on psychology, so students can see themselves in the context of a wider world. This new edition offers 2100 research citations dated 2015-2020, making these the most up-to-date introductory psychology course resources available. With so many exciting new findings, and every chapter updated with current new examples and ideas, students will see the importance and value of psychological research, and how psychology can help them make sense of the world around them. The abundant, high quality teaching and learning resources in LaunchPad and in Achieve Read & Practice, carefully matched to the text content, help students succeed, while making life easier and more enjoyable for instructors.

Some 28 million people in America and 350 million people worldwide live with hearing loss. How do these people and their families

cope? What are their experiences of pain, humor, and hope? What support do medicine and technology now offer them, and what is on the horizon? In this engaging and practical book, David Myers, who has himself suffered gradual hearing loss, explores the problems faced by the hard of hearing at home and at work and provides information on the new technology and groundbreaking surgical procedures that are available. Drawing on both his own experiences and his expertise as a social psychologist, Myers recounts how he has coped with hearing loss and how he has incorporated technological aids into his life. The family and friends of the hard of hearing also face adjustments. Myers addresses their situation and provides advice for them on how best to alert loved ones to a hearing problem, persuade them to seek assistance, and encourage them to adjust to and use hearing aids. The images in this textbook are in grayscale. There is a color version available - search for ISBN 9781680922370. Psychology is designed to meet scope and sequence requirements for the single-semester introduction to psychology course. The book offers a comprehensive treatment of core concepts, grounded in both classic studies and current and emerging research. The text also includes coverage of the DSM-5 in examinations of psychological disorders. Psychology incorporates discussions that reflect the diversity within the discipline, as well as the diversity of cultures and communities across the globe.

Looking for content review in addition to practice? Try Barron's AP Psychology, which features detailed content review, expert tips, and full-length practice tests.

Dreams puzzled early man, Greek philosophers spun elaborate theories to explain human memory and perception, Descartes postulated that the brain was filled with animal spirits, and psychology was officially deemed a science in the 19th century. In this Seventh Edition of AN INTRODUCTION TO THE HISTORY OF PSYCHOLOGY, authors Hergenhahn and Henley demonstrate that most of the concerns of contemporary psychologists are manifestations of themes that have been part of psychology for hundreds--or even thousands--of years. The book's numerous photographs and pedagogical devices, along with its biographical material on key figures in psychology, engage readers and facilitate their understanding of each chapter. The major religions of the world are a mystery to many high school teens. Now you can help them unlock the doors of these traditions with our new text, *World Religions: A Voyage of Discovery*. The book is an introductory survey that helps eleventh and twelfth graders understand the people, dimensions, and religious principles of the world's major religions. The textbook includes a chapter on each of eleven major world religions, including Christianity, Islam, Hinduism, Buddhism, Judaism, and others. The text offers the Catholic perspective on interreligious dialogue, an overview of basic questions that religions address, and Ninian Smart's seven dimensions of religion. A glossary and word pronunciations in each chapter help students learn unfamiliar terms. In addition, the second edition of this text incorporates the following new features: a new chapter on modern trends in religion; new, more detailed maps; a new section on the Aztec religion of Mesoamerica; a sidebar in each chapter offering examples of the seven dimensions of religion; and review questions at the end of each chapter.

This psychiatric-mental health undergraduate textbook, based on the theories of Hildegard Peplau and Joyce Travelbee, is the first recent book devoted to interpersonal relations as the foundation for therapeutic practice in psychiatric nursing. It guides the student through the essential phases of self-discovery necessary to integrate interpersonal nursing theory into practice, and provides a historical overview of the profession. The book addresses the most current ISPN and APNA competencies and presents content designed to foster self-growth, and critical thinking and decision-making skills, as well as to implement therapeutic interventions. It offers an overview of theories of mental illness and a detailed discussion of commonly seen psychiatric disorders, and addresses mental health care settings across the lifespan and different populations. Clinical case studies and first-hand accounts vividly describe the realities of living with specific mental illnesses, "What would you do?" questions stimulate discussions, and sample and practice care plans for chronic mental illness facilitate integration of concepts into practice. Evidence-based practice summaries from psychiatric nursing and related research literature are included, and NANDA guidelines are integrated throughout. A new chapter with DSM-V updates is also available. This affordably priced text additionally comes with supplementary materials for both teachers and students, including handy review guides, summaries, drug monographs, and hyperlinks to films and video illustrating content. A test bank and PowerPoint slides are also available for instructors. Key Features: Integrates and applies the

Experts from psychology, neuroscience, philosophy, ecology, and evolutionary biology assess the field of animal cognition.

Excerpt from book: CHAPTER II The Evidence Of Mind 6. Inferring Mind from Behavior In the last chapter we saw that some recent writers upon animal behavior and its interpretation, while refusing to admit the presence of consciousness in all forms of animal life, yet hold that it can be proved to exist in certain forms. The latter, it is maintained, display certain peculiarities of behavior that may be regarded as proofs of a psychic accompaniment. Into the nature of these proofs we may now inquire. To begin with, can it be said that when an animal makes a movement in response to a certain stimulus, there is an accompanying consciousness of the stimulus, and that when it fails to move, there is no consciousness? Is response to stimulation evidence of consciousness? In the case of man, we know that absence of visible response does not prove that the stimulus has not been sensed; while it is probable that some effect upon motor channels always occurs when consciousness accompanies stimulation, the effect may not be apparent to an outside observer. On the other hand, if movement in response to the impact of a physical force is evidence of consciousness, then the ball which falls under the influence of gravity and rebounds on striking the floor is conscious. Nor is the case improved if we point out that the movements which animals make in response to stimulation are not the equivalent in energy of the stimulus applied, but involve the setting free of energy stored in the animal as well. True, when a microscopic animal meets an obstacle in its swimming, and darts backward, the movement is not a mere rebound; it implies energy contributed by the animal's own body. But just so an explosion of gunpowder is not the equivalent in energy of the heat of the match, the stimulus. Similarly it is...--Annotation Published: April 2014.
