

National Accreditation Program For Breast Centers

The first edition of the Encyclopedia of Cancer and Society was published in 2007 and received a 2008 Editors' Choice Award from Booklist. It served as a general, non-technical resource focusing on cancer from the perspective of the social and behavioral sciences, exploring social and economic impacts, the "business" of cancer, advertising of drugs and treatment centers, how behavior change could offer great potential for cancer prevention, environmental risks, food additives and regulation, the relation between race and ethnicity and cancer risk, socioeconomic status, controversies—both scientific and political—in cancer treatment and research, country-by-country entries on cancer around the world, and more. Given various developments in the field including new drug treatments, political controversies over use of the vaccines Gardasil and Cervarix with young girls to prevent cervical cancer, and unexpected upticks in the prevalence of adult smoking within the U.S. following decades of decline, the SAGE Encyclopedia of Cancer and Society, Second Edition serves as an updated and more current encyclopedia that addresses concerns pertaining to this topic. Key Features:

- Approximately half of the 700 first-edition articles revised and updated
- 30+ new entries covering new developments since 2006
- Signed entries with cross-references
- Further Readings accompanied by pedagogical elements
- New Reader's Guide
- Updated Chronology, Resource Guide, Glossary, and through new Index

The SAGE Encyclopedia of Cancer and Society, Second Edition serves as a reliable and precise source for students and researchers with an interest in social and behavioral sciences and seeks to better understand the continuously evolving subject matter of cancer and society.

Since more and more surgeries and procedures are being performed in outpatient settings, the policies, plans, and procedures for these services are of increasing importance. *50 Policies and Plans for Outpatient Services* details commonly used policies and plans in free-standing ambulatory care centers. Included are plans and policies concentrating on emergency management, medication safety, informed consent, and medical staff credentialing to name a few. As an introduction to the model documents presented, the book begins with a how-to chapter to guide readers through the process of formatting the documents and making them their own. The policies and plans discussed serve as templates and can apply to licensing and regulatory agencies such as Medicare, the Joint Commission, and AAAHC. The documents included in this book are excellent templates to use as a starting point for producing policies and plans that help create the flow and process in an organization. Knowing their specific local, state, and other governing agency requirements, readers can customize the documents to reflect the unique structure and qualities of their organization through the use of the enclosed CD. The resulting policies, procedures, and plans are the back-up documents that provide rationale, vision, and theory, and can be valuable tools for making effective clinical and administrative decisions. In addition to the documents provided on the CD-ROM, the book also includes a list of helpful resources.

This book discusses how effective navigation requires a team approach to oncology care and should never be considered an "add-on" resource or service. The Academy of Oncology Nurse & Patient Navigators (AONN) is the only national professional organization for navigation professionals, and has more than 6,000 members, 90% of

which are oncology nurse navigators. They are the experts on creating team-based programs, which remove the risk of others trying to reinvent the wheel by designing a navigation program from scratch. They also understand the role of effective navigation across the entire continuum of care, and understand and are able to apply other key aspects of navigation, including clinical trial screenings and tumor board coordination and monitoring, as well as measurement using evidence-based navigation metrics, to name but a few. It is the only book designed to educate and support anyone developing a new navigation program, or wanting to improve one they have created. As such it offers a guide for cancer centers needing to develop and implement an oncology navigation program; understand and successfully meet and exceed the Commission on Cancer accreditation standards linked to navigation; expand or improve their current navigation program as well as demonstrate its value using reliable measurable results, including patient satisfaction and improved-quality clinical outcomes. This comprehensive book also provides insights into applying the information presented to the real world of oncology care.

This book presents the most recent developments in oncologic breast surgery and takes full account of diagnostic, pathologic, and radiologic inputs. It is divided into three parts, the first of which discusses the premises underlying the modern surgical approach to breast cancer. The second part is devoted to what might be termed the conservative program, i.e., breast conservation and oncoplastic surgery, conservative mastectomy, and sentinel node biopsy and axillary dissection. The final part of the book covers different forms of surgery and other treatments in particular settings. Topics include plastic and reconstructive surgery, DCIS surgery, radio-guided surgery, adjuvant systemic therapy, intraoperative radiotherapy, and the role of surgery in locally advanced and metastatic disease. The detailed descriptions of techniques are accompanied by numerous high-quality illustrations. This book will be of value to both experienced practitioners and surgical trainees. ?

Winner of a 2014 Shingo Research and Professional Publication Award! Reaching America's true potential to deliver and receive exceptional health care will require not only an immense and concerted effort, but a fundamental change of perspective from medical providers, government officials, industry leaders, and patients alike. The Institute of Medicine set forth six primary "aims" to which every participant in the American healthcare system must contribute: health care must be safe, timely, effective, efficient, equitable, and patient-centered. Presented as the acronym STEEEP, the collective realization of these goals is to reduce the burden of illness, injury, and disability in our nation. Baylor Health Care System is committed to doing its part and has adopted these six aims as its own. *Achieving STEEEP Health Care* tells the story of Baylor Health Care System's continuing quality journey, offering practical strategies and lessons in the areas of people, culture, and processes that have contributed to dramatic improvements in patient and operational outcomes. This book also discusses newer approaches to accountable care that strive to simultaneously improve the patient experience of care, improve population health, and reduce per capita costs of health care. Provides the perspectives of senior leaders in the areas of corporate governance, finance, and physician and nurse leadership. Supplies strategies for developing and supporting a culture of quality, including systems and tools for data collection, performance measurement and reporting. Includes service-line examples of successful

quality improvement initiatives from reducing heart failure readmissions to coordinating cancer care Outlines approaches to accountable care and improved population health and well-being

This issue of Surgical Oncology Clinics of North America, guest edited by Dr. Kelly Hunt, is devoted to Changing Paradigms in Breast Cancer Diagnosis and Treatment. Dr. Hunt has assembled expert authors to review the following topics: Tomosynthesis in breast cancer imaging: how does it fit into preoperative evaluation and surveillance?; Lobular breast cancer: different disease, different algorithms?; Hypofractionated radiation therapy in breast conserving therapy; Oncoplastic breast reconstruction: should all patients be considered?; Neoadjuvant endocrine therapy: who benefits most?; Breast cancer disparities: how can we leverage genomics to improve outcomes?; Anatomy and breast cancer staging: is it still relevant?; When does atypical ductal hyperplasia require surgical intervention?; Surgical intervention for lymphedema; Are there alternative strategies in the local management of DCIS?; Genetic testing and genetic counseling: what is standard of care?; Molecular subtypes and local-regional control of breast cancer; Intraoperative margin assessment in breast cancer management; Triple negative breast cancer: who should receive neoadjuvant chemotherapy?; and more!

Delivering high-quality cancer care to all patients presents numerous challenges, including difficulties with care coordination and access. Patient navigation is a community-based service delivery intervention designed to promote access to timely diagnosis and treatment of cancer and other chronic diseases by eliminating barriers to care, and has often been proposed and implemented to address these challenges. However, unresolved questions include where patient navigation programs should be deployed, and which patients should be prioritized to receive navigation services when resources are limited. To address these issues and facilitate discussion on how to improve navigation services for patients with cancer, the National Cancer Policy Forum of the National Academies of Sciences, Engineering, and Medicine held a workshop on November 13 and 14, 2017. At this workshop, a broad range of experts and stakeholders, including clinicians, navigators, researchers, and patients, explored which patients need navigation and who should serve as navigators, and the benefits of navigation and current gaps in the evidence base.

Abstract In a rural Northern California setting, a Clinical Nurse Leader intern was implemented as a designated Nurse Navigator (NN) for a regional breast health population. The global aim of this project is to improve care for potential and actual newly diagnosed breast cancer patients by increasing access to care, decreasing barriers, and improving timeliness of care. Using evidence based on an extensive scholarly literature review, the designated NN will accomplish the aim through care coordination, thereby improving patient outcomes, decreasing outmigration of care, and increasing the financial viability of the breast health program. The ultimate goal of the breast health team is to obtain accreditation as a Breast Center of Excellence (BCoE) by the National Accreditation Program for Breast Centers (NAPBC). The NN first observed the microsystem and performed an RCA and SWOT analysis. Theory U and the IHI MFI are used to guide the implementation of the project. An existing software program, the Mammography Reporting System (MRS), was utilized to collect specific quality metrics for baseline data, and will be used to evaluate expected improvements. In comparison to the Oncology Roundtable Cancer Quality Metric Selection Tool, targeted metrics to improve include: Time from screening to diagnostics, diagnostics to biopsy, biopsy to surgery, as well

as needle core biopsy rate, and outmigration of care. More time is needed to mature data for a viable evaluation of this project, although preliminary feedback has been positive from patients and providers.

This book presents the current trends and practices in breast imaging. Topics include mammographic interpretation; breast ultrasound; breast MRI; management of the symptomatic breast in young, pregnant and lactating women; breast intervention with imaging pathological correlation; the postoperative breast and current and emerging technologies in breast imaging. It emphasizes the importance of fostering a multidisciplinary approach in the diagnosis and treatment of breast diseases. Featuring more than 800 high-resolution images and showcasing contributions from leading authorities in the screening, diagnosis and management of the breast cancer patient, *Breast Cancer Screening and Diagnosis* is a valuable resource for radiologists, oncologists and surgeons.

This issue of *Surgical Clinics of North America* focuses on Rural Surgery and is edited by Dr. Tyler G. Hughes. Articles will include: Status of the rural workplace: Hospital survival and economics; Rural standards and the quality equation; Scope of practice of the rural surgeon; Advanced technology and the rural surgeon; Qualitative research in rural surgery; Perioperative support in the rural surgery world; Initial and ongoing training of the rural surgeon; Demographics in rural populations; Dealing with the sick rural surgery patient in need of transfer; National quality projects and patient selection decisions; Status of the rural surgical workforce; Regionalization of rural surgery; and more!

MRI is increasingly being used by radiologists to confirm diagnoses and perform operative procedures of the breast. MRI's contrast between soft tissues in the breast is many times greater than that obtained by plain-film mammography. As opposed to x-rays, which are known to cause damage to cellular DNA, the magnetic fields and radiowaves used with MRI are not known to have any long-term biologic effect. MRI of the breast requires intravenous injection of a contrast agent, which helps highlight breast abnormalities. The American Cancer Society has advised women at high risk for breast cancer to have an MRI. This book, a collaboration between an experienced breast imager and a breast surgeon, contains 100 cases and covers high risk screening, extent of disease evaluation, as well as the full range of benign and malignant tumors found in the breast: DCIS, invasive ductal cancers, and invasive lobule cancers. Rare lesions such as phyllodes, mucinous, liposarcomas, and myotiboblastomas are also covered. Pathologic correlations are included where appropriate. This book has a special emphasis on preoperative planning involving MRI and thus may also appeal to surgical oncologists specializing in breast cancer.

"The BreastScreen Australia Program aims to reduce mortality and morbidity from breast cancer. The BreastScreen Australia National Accreditation Standards are designed to ensure that the national mammographic screening program is offering a high quality service to women attending for screening and assessment."--Foreword.

This comprehensive manual on breast disease deals with all aspects of the surgical management of both benign and malignant disease. The chapters are written by leading experts, clearly illustrated with line drawings, clinical photos and diagnostic radiology images. Breast Surgery is divided into sections following the patterns of patient management from diagnosis through treatment and reconstruction. Part One, "Fundamentals", addresses common aspects of working with breast cancer patients and understanding the members of the breast cancer team. Part Two is an overview of "Biologic Principles". Parts Three, Four, and Five review "The Initial Evaluation", "Common Presenting Problems", and "Diagnostic Techniques". Part Six, an overview of breast cancer treatment, includes chapters on "Breast Cancer Staging", "Introduction to Gene Expression Profiling", and "Psychological Issues". Part's Seven through Twelve deal with important aspects of breast surgery and interdisciplinary care including pathology, medical oncology, and radiation oncology, with several chapters on

neoadjuvant therapy and partial breast irradiation. Part Thirteen includes many chapters on followup of the breast cancer survivor, including late changes on physical exam and imaging, local recurrence, and treating metastatic disease. Though not intended to replace a text reference, *Breast Surgical Disease and Interdisciplinary Management* offers a comprehensive guide to provide practical advice for those seeking concise, expert input that can be quickly accessed on multiple topics associated with the care of the breast cancer patient.

Developing or existing breast cancer centres strive to provide the highest quality care possible within their current financial and personnel resources. Although the basics in diagnosis and treatment of breast cancer are well known, providing, monitoring, and assessing the care offered can be challenging for most sites. Based on the work of the International Congress of Breast Disease Centres, this book provides a comprehensive overview of how to start or improve a breast unit wherever you live. Written by a multidisciplinary team of over 100 experts from 25 countries, it provides a practical guide for how to optimally organise high quality integrated breast cancer care, whilst taking into account the local economics and resources available to different countries. Each component of the care pathway, including imaging, surgery, systemic treatment, nursing, and genetic assessment, is discussed from a theoretical and practical aspect. The authors define targets to strive for, methods to assess care, and key recommendations for how to improve within existing limitations. Finally, the book looks beyond the breast care unit to consider accreditation and certification, emerging technologies, media, and the role of governments. This guide will be valuable for anyone working in the field of integrated breast cancer care, including established breast care experts, those new to the field, and policy makers interested in the social, financial, and political aspects of improving breast care quality.

This issue of *Surgical Oncology Clinics of North America* is devoted to "Breast Cancer" and is edited by Lisa Newman, MD, of the University of Michigan. Expert authors in this issue review this topic in articles such as: Applications for Breast MRI; Lobular Neoplasia; Epidemiology of Breast Cancer; Percutaneous Ablation of Breast Tumors; Triple Negative Breast Cancer and the Basal Breast Cancer Subtype; Molecular Profiling of Breast Cancer; Surgical Leadership and Standardization of Multidisciplinary Breast Cancer Care; Neoadjuvant/Primary Systemic Therapy for Breast Cancer; Management of the Clinically Node-Negative Axilla in Patients with Primary and Locally-Recurrent Breast Cancer; Management of the Axilla in Patients with Node-Positive Breast Cancer; Prophylactic Bilateral Mastectomy and Contralateral Prophylactic Mastectomy; Advances in Reconstruction of Mastectomy and Lumpectomy Defects; Nipple-Sparing Mastectomy; and Breast Cancer Disparities.

A valuable reference for those involved in the field of ambulatory patient care, *Improving Quality in Outpatient Services* offers time-tested instruction on how to create a world-class outpatient program. It supplies a high-level overview of current opportunities, national quality programs, and challenges—outlining the policies, procedures, and plans required for success. Stimulating readers with a wealth of practical applications, stories, and examples, the book details the governance, medical staff, and quality structures required to create, implement, and maintain a safe and efficient outpatient program. It introduces powerful techniques for infection control, medication management, risk prevention, and the elimination of medication errors. It also: Lists mandatory policies and procedures Contains practice drills to prepare you for real-world scenarios Explains how to create a report card to measure quality at all levels Includes a sample curriculum that outlines the courseware required by OSHA and other licensing and regulatory agencies The authors address documentation and

human resources factors and supply an abundance of information and resources in the appendices, including how and where to apply for certification, medical record review tools, policy and procedure checklists, and a state-by-state listing of resources available for outpatient and ambulatory programs. Explaining how to involve patients in the decision making process, the text details a proven system for evaluating quality at all levels of your organization.

Stay on top of the latest knowledge in the field with this must-have resource for all clinicians who treat breast diseases. Expand your knowledge of every aspect of breast diseases as a diverse and distinguished group of internationally-recognized experts summarize the current knowledge, including biology and epidemiology, clinical features, and management. Ideal for any clinician seeing patients with breast disease, especially carcinoma of the breast, This full color 5th Edition of the authoritative text in the field is designed to foster the understanding necessary to provide optimal patient care..

Features Covering the latest major clinical trials, along with concise management summaries for each clinical chapter. Illustrations and tables that emphasize breast imaging, microscopic and gross histology, anatomy, and procedural technique enhance visual understanding. Algorithms on problem management in all aspects of breast disease from benign processes to breast carcinoma inform clinical practice. eBook with content updates is included with purchase New chapters have been added on pathology of in situ carcinomas, prophylactic contralateral mastectomy, implications of obesity in breast cancer, and an overview of survivorship issues To keep perspectives fresh and updated, over one third of the authors are new to this edition

Recent discoveries and clarifications of known information about the mesentery have now established that these complex structures function together as an individual organ within the human body. As such, conditions that affect the mesentery can now be grouped within a single area of study and clinical practice. The various aspects of mesenteric diseases have not been brought together in a single source and this book aims to bring them together for the first time. It will cover general areas such as anatomy, histology and physiology of the mesentery. A description of diagnostic procedures used to evaluate patients with mesenteric disorders will follow. A practical survey with detailed descriptions of medical, surgical, and neoplastic disorders of the mesentery is also be included. This book is intended to be a guide for clinical practitioners including gastroenterologists, general surgeons, colorectal surgeons, primary care physicians, nurse practitioners and physician assistants who manage patients with mesenteric disorders.

This text provides a comprehensive review of what comes after the completion of a general surgery residency, and will serve as a valuable resource for those surgeons, residents, and medical students interested in a career in general surgery. This book reviews several areas of fellowships and how to navigate through the application process, provide a guide for finding a job, negotiating through your first position, and also discusses other difficult topics such as how to deal with malpractice lawsuits. All chapters are written by experts who have gone through the various processes.

Business improvement best practices and a proven methodology for improving corporate performance management, illustrated through a high performing program including numerous team case studies Corporate performance management consists of a set of processes that help organizations optimize their business performance. It

provides a framework for organizing, automating and analyzing business methodologies, metrics, processes and systems that drive business performance. Corporate Performance Management Best Practices will help your organization benchmark itself against the best. Written by the winner of three globally accepted performance management awards Focuses on a single case study chronicling a health care system's corporate performance management journey Explores how the use of corporate performance management methods has created significant and broad based improvements in patient satisfaction scores, medical outcomes, people development, and corporate shared services and clinical processes Revealing practical techniques that can be adopted at all levels of an organization, from facilities manager to HR manager to CFO to CEO, Corporate Performance Management Best Practices provides a proven implementation model that accelerates breakthrough results. Endorsed by the Academy of Oncology Nurse & Patient Navigators (AONN+), Oncology Nurse Navigator: Starting Your Professional Career covers the history of nurse navigation, the many and varied responsibilities of oncology nurse navigators, oncopolitics, future career expectations, and more crucial topics to ensure a successful and fulfilling career as an Oncology Nurse Navigator.

Minimize the risks and maximize your surgical success with Current Surgical Therapy! Hundreds of preeminent general surgeons present you with today's best treatment and management advice for a number of diseases and associated surgeries, discussing which approach to take, how to avoid or minimize complications, and what outcomes to expect. Current Surgical Therapy is indispensable for quick, efficient review prior to surgery, as well as when preparing for surgical boards and ABSITES! Find the answers you need quickly inside the user-friendly book. Obtain dependable advice on patient selection, contraindications, techniques, pitfalls, and more from this best-selling surgical resource, trusted by generations of surgeons for decades as the definitive source on the most current surgical approaches. Consumer Health: Making Informed Decisions is a concise, current text with the most up-to-date information about health care reform and insurance. It is devoted to the most important issues relative to consumer health issues, including advertising, dietary supplements, herbal remedies, weight management, and medications. There are in-depth analyses of the American health care system, insurance options, and consumer protection. The text also takes a critical look at complementary and alternative therapies. Throughout the text, there are guidelines for making decisions that can benefit the individual. A comprehensive list of learning objectives precede each chapter and a list of study questions conclude each chapter. The questions are designed to help the student summarize the major points of the chapter, prepare for exams, and critically analyze the material contained in the chapters. Instructor Resources: PowerPoint Presentations

This in-depth resource combines international perspectives and expertise on genomic and molecular information, clinical presentation, gross and microscopic pathologic findings, radiologic and laboratory diagnosis, immunohistochemistry, and theranostics so you can accurately diagnose the full spectrum of breast diseases. Stay current on hot topics in breast pathology, including theranostic aspects of diagnosis, genomic applications and molecular diagnosis, proper handling of breast specimens to ensure proper sampling and processing, and up-to-date immunohistochemical information. Get a clear picture of how diseases present from over 1750 high-quality images in full color. Tap into the expertise of leading authorities from around the world who offer an integrated approach, incorporating genomic and molecular information, clinical presentation, gross and microscopic pathologic findings, radiologic and laboratory diagnosis, and immunohistochemistry. Find information quickly and easily with the consistent format that features quick reference points at the beginning of each chapter.

Now completely updated with the latest classifications of breast pathology and molecular diagnosis, David J. Dabbs' *Breast Pathology*, 2nd Edition, remains your go-to source for integrated, comprehensive coverage of this fast-changing field. Written by internationally acclaimed pathologists, this definitive reference incorporates genomic and molecular information, clinical presentation, gross and microscopic pathologic findings, radiologic and laboratory diagnosis, immunohistochemistry, and theranostics – providing complete, authoritative information for pathology trainees, practitioners, and oncologists. Approximately 2,000 full-color pathological images clearly depict clinical, radiological, molecular, immunohistochemical, and theranostic aspects of disease. Quick reference points at the beginning of each chapter conveniently list all relevant diagnostic, theranostic, and genomic data for fast retrieval. Immunohistochemistry for each entity is mapped according to diagnostic, theranostic, and genomic applications with specific regards to disease entities in each chapter. Breast specimen handling is discussed in detail to ensure proper sampling and processing for optimal molecular and immunohistochemistry resulting. Consult this title on your favorite e-reader, conduct rapid searches, and adjust font sizes for optimal readability. All chapters have been updated with the latest breast pathology classifications and the most recent information on molecular diagnosis. New chapter on next generation DNA sequencing and management of clinically advanced breast cancer.

This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.

Publisher's Note: Products purchased from 3rd Party sellers are not guaranteed by the Publisher for quality, authenticity, or access to any online entitlements included with the product. For more than 30 years, Perez and Brady's *Principles and Practice of Radiation Oncology* has been the must-have standard reference for radiation oncologists and radiation oncology residents who need a comprehensive text covering both the biological and physical science aspects of this complex field as well as disease site-specific information on the integrated, multidisciplinary management of patients with cancer. The book has established itself as the discipline's "text-of-record," belonging on the shelf of all of those working in the field. The Seventh Edition continues this tradition of excellence with extensive updates throughout, many new chapters, and more than 1,400 full-color illustrations that highlight key concepts in tumor pathogenesis, diagnosis, and targeted radiation therapy.

Completely revised to reflect recent, rapid changes in the field of interventional radiology (IR), *Image-Guided Interventions*, 3rd Edition, offers comprehensive, narrative coverage of vascular

and nonvascular interventional imaging—ideal for IR subspecialists as well as residents and fellows in IR. This award-winning title provides clear guidance from global experts, helping you formulate effective treatment strategies, communicate with patients, avoid complications, and put today's newest technology to work in your practice. Offers step-by-step instructions on a comprehensive range of image-guided intervention techniques, including discussions of equipment, contrast agents, pharmacologic agents, antiplatelet agents, and classic signs, as well as detailed protocols, algorithms, and SIR guidelines. Includes new chapters on Patient Preparation, Prostate Artery Embolization, Management of Acute Aortic Syndrome, Percutaneous Arterial Venous Fistula Creation, Lymphatic Interventions, Spinal and Paraspinal Nerve Blocks, and more. Employs a newly streamlined format with shorter, more digestible chapters for quicker reference. Integrates new patient care and communication tips throughout to address recent changes in practice. Highlights indications and contraindications for interventional procedures, and provides tables listing the materials and instruments required for each. Features more than 2,300 state-of-the-art images demonstrating IR procedures, full-color illustrations of anatomical structures and landmarks, and video demonstrations online. 2014 BMA Medical Book Awards Highly Commended in Radiology category!

Guest editor Lena Napolitano has assembled an expert team of authors on the topic of Trauma in the ICU. Articles will focus on: Non-compressible Torso Hemorrhage; Prediction of Massive Transfusion in Trauma; Coagulopathy of Trauma; Viscoelastic testing and Hyperfibrinolysis in Trauma; Tranexamic Update in Trauma; Optimal Reversal of Novel Anticoagulants in Trauma; Optimal Transfusion for Traumatic Hemorrhagic Shock; and more

In 2002, Lippincott published the Manual of Breast Diseases, edited by Professor Ismail Jatoi. The current book, Management of Breast Diseases, is an adaptation of that manual, with Professor Manfred Kaufmann of the Goethe-University of Frankfurt serving as co-editor. Most of the chapters from the original manual have been either extensively revised or discarded, and several new chapters added. This text contains more material than the original manual, but it is still intended as a basic guide for the wide spectrum of clinicians (surgeons, gynecologists, oncologists, radiation oncologists, internists, general practitioners) who treat breast diseases, both benign and malignant. To compile this text, we assembled experts from throughout the world. Thus, this text provides not only a broad overview of breast diseases, but also highlights different perspectives from different parts of the world. Yet, it is worth noting that the management of breast cancer is now largely predicated on evidence-based medicine. Several large, randomized prospective trials have demonstrated the efficacy of breast cancer screening and chemoprevention. Other large trials have addressed the impact of systemic therapy, radiotherapy, and variations in local therapy on breast cancer mortality. Many of these landmark trials are discussed in this text, and they clearly have had a beneficial effect. Indeed, since about 1990, breast cancer mortality rates have declined substantially in most industrialized countries, and this trend is expected to continue in the years ahead.

Oncoplastic and Reconstructive Management of the Breast, Third Edition provides a comprehensive and contemporary account of techniques in oncoplastic and reconstructive breast surgery. Uniquely, this book includes short, concise chapters containing only the most critical information. Many of the chapters are entitled "My Approach" and this enables the reader to gain an insight into the clinical practice of the world's breast disease experts. The true multidisciplinary nature of the book ensures

that the perspectives of all members of the breast cancer team are included. This transfer of knowledge between disciplines leads to improved patient care and the integration of multidisciplinary treatment, thus providing an educational and practical multidisciplinary breast cancer book for practicing breast cancer doctors, and trainees worldwide.

Now in a single, convenient volume, *The Breast: Comprehensive Management of Benign and Malignant Diseases*, 5th Edition covers every clinically relevant aspect of the field: cancer, congenital abnormalities, hormones, reconstruction, anatomy and physiology, benign breast disease, and more. Building upon the strengths of previous editions, this updated volume by Drs. Kirby I. Bland, Edward M. Copeland III, V. Suzanne Klimberg, and William J Gradishar, includes the latest innovations in breast cancer detection and treatment in a practical, easy-to-use format ideal for today's surgeons. Delivers step-by-step clinical guidance highlighted by superb illustrations that depict relevant anatomy and pathology, as well as medical and surgical procedures. Reflects the collaborative nature of diagnosis and treatment among radiologists, pathologists, surgeons, oncologists, and other health care professionals who contribute to the management of patients with breast disease. Offers the most comprehensive, up-to-date information on the diagnosis and management of, and rehabilitation following, surgery for benign and malignant diseases of the breast. Covers the latest developments in receptor modulation, targeted monoclonal antibodies, evolving inhibitors with triple-negative disease, and more. Discusses recent minimally invasive surgical techniques and new developments in oncoplastic breast conservation techniques. Contains significant updates to the "Management of Systemic Disease" section that reflect the latest advances in chemotherapy, hormonal resistance, and therapy.

Breast cancer is the most common cancer among women that affects mostly those in middle and older age groups in most parts of the world. The incidence is showing an increasing trend affecting younger women and the cost to prevent, treat and manage this chronic disease is continuously escalating. Universal Health Coverage (UHC) is an initiative by World Health Organisation that encourages policy makers in all countries in the world to organise their health systems that are responsive in providing access to quality health care to every citizen in need of health services without facing the financial hardship. Malaysia health system has been well developed and was said to have achieved universal health coverage based on the easy access to primary and secondary health care services in the public sector. In this book, we present our effort to assess if Malaysia provides UHC for preventive, curative and palliative to breast cancer patients . At the inception of the study, we embarked on the development of a composite index to assess the overall status of UHC. This is followed by an extensive research to explore the extent of financial coverage for management of breast cancer. Over 300 patients in various stages of the breast cancer attending the selected public tertiary hospitals were interviewed and their medical records reviewed to assess their health spending and to estimate the incidence of catastrophic health expenditure. The book is the first of its kind that provides comprehensive real-world data on universal coverage for breast cancer patients in the world.
