She is a petite, innocent-looking young woman with fantasies of skinning and flaying human skin. He is a diagnosed schizophrenic who fantasises about committing cold-blooded murder. When they meet, they will plan and execute one of the most horrific crimes ever documented in this country. In April 2011, the sleepy gold-mining town of Welkom was deeply shocked when the dismembered, decapitated body of Michael van Eck was discovered buried in a shallow grave on the outskirts of the local cemetery. Was this a muti murder, the work of a deranged madman or part of a satanic ritual? For the investigators and psychologists involved, the mystery only deepened when a seemingly unlikely arrest was made: a soft-spoken girl next door and her intelligent, devoted fiancé. Joining forces with some of the country's most specialised experts in the occult and psychopathy, Lieutenant Ogies Nel of the Welkom Detective Unit and her colleagues in the South African Police Service unravelled one of the most brutal psychologically motivated murders ever committed in South Africa's crime history. As they uncovered the evidence, they exposed a most heinous deed, alarmingly similar to the crimes committed by serial killer Ed Gein, who had a

preference for flaying his victims' skin. Grave Murder is the chilling account of how appearances can be very deceptive – how those who might seem innocent and harmless on the outside may hide some dark, disturbing secrets that are just waiting to be revealed.

Initially, they were the waste product of wooden bowls turned in an ancient technique by Robin Wood of the United Kingdom, an expert pole-lathe turner and author. Known for his historical and functional objects made on a foot-powered lathe. Wood keeps the tradition of pole turning alive. The leg-powered process Wood uses results in thousands of solid, round chunks - Cores - that get broken out of the center of the bowl at the last moment. Wood donated 100 Cores, which ranged in size from 2 x 2" to 3 x 4" to The Center for Art in Wood in Philadelphia. The Center sent Cores to two-score artists who agreed to the challenge of reworking them into new pieces of art. These works, shown here in more than 240 color photos, formed the exhibition – Robin Wood's CORES Recycled – by The Center for Art in Wood. Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and Page 2/10

costs to consumers of available technology combinations for three types of engines: sparkignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption--the amount of fuel consumed in a given driving distance--because energy savings are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information. When Fiat entered rallying in 1970, its ultimate aim was to become World Rally Champion and the 131 Abarth of 1976-1980 provided the machinery to make that possible. It started winning World rallies Page 3/10

within months of being launched, and in 1977, 1978 and 1980 the 'works' team also won the World Championship for Makes, and set every standard by which Rally Giants were to be judged. Was there ever any doubt that successors like the Lancia Rally 037 and the Delta Integrale would eventually come from the same stable?

From actor and comedian Joel McHale comes the most important celebrity-penned book of this, or any, generation. Part shocking tell-all memoir, part aspirational how-to guide, and mostly all book, this oneof-a-kind tome is required reading for anyone who enjoys Hollywood gossip, get-rich-gradually tips, and copious illustrations and charts. "... Thanks for the Money is a clever, much-needed antidote to the age of celebrity book deals. If the tide can't be stopped, at least it can be mocked."—EW.com Joel McHale pulls back the curtain on his personal journey to stardom! Here, for the first time, Joel reveals all that has molded him into the acclaimed comic actor he is today: a love of performance, a series of boyhood head injuries, and most importantly, a passion for financial compensation and free shoes. It's all here: Joel's career trials and tribulations, his criminal trials and tribulations, and an honest, unflinching list of all the people he's been paid money to make out with, on camera. But the book does not stop there! Because if you want wealth, fame, and cost-free footwear, Joel will share every vital tip he has learned: an insanely low-carb diet plan, how to escape from a certain pseudo-religious celebrity cult, and more!

How can you unlock the power of the Joel McHale who lurks inside? What happened when Joel fought his Community co-star Chevy Chase? And hey, while we're at it, what's up with Joel's hair—really? All will be revealed, within the pages of Thanks for the Money. Buy now, and receive—as a special bonus—an email receipt that details your purchase!

Germany, 1941: "We live together, or we die together." A novel that will stay with you forever, The Girl Who Survived tells the inspiring true story of Ilse Stein, a German Jew who was imprisoned in a ghetto--and who fell in love with the man she was supposed to loathe. For Ilse life is unrecognizable. A year ago, she wasn't forced to wear a star on her clothes. A year ago, her parents were alive, not yet killed by their own countrymen. A year ago, she had her freedom. Now, at the break of dawn, she steps off the cattle train into a Minsk ghetto. This is Ilse's new home: trapped by barbed wire, surrounded by SS guards she is forbidden to look in the eye, with no choice but to trade the last of her belongings for scraps of food. Sentenced for the crime of simply existing, she doesn't expect to live past the summer. Yet the prisoners in the ghetto refuse to give up--the underground resistance is plotting their escape. Ilse's first act of defiance is smuggling from the munitions factory, slipping bullets into the lining of her pockets. But this is just the beginning... When Ilse meets Wilhem, a local SS administrative officer, she never dreams that her greatest rebellion will be falling for him. Wilhem promises that she will survive, even if the cost is his life. But in a world of such danger, daring to love is the most dangerous risk of

all... Fans of The Tattooist of Auschwitz, The Choice, and The Orphan Train will be completely gripped by this heartbreaking tale. Based on a true story, this powerful novel shows that love is stronger than terror, and that when life takes everything from you, death is not to be feared... The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they

work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.
