Deals with the result of a study conducted by the FDIC on banking crisis of the 1980s and early 1990s. Examines the evolution of the processes used by FDIC and RTC to resolve banking problems, protect depositors and dispose of the assets of the failed institutions.

For more than 40 years, Computerworld has been the leading source of technology news and information for IT influencers worldwide. Computerworld's award-winning Web site (Computerworld.com), twice-monthly publication, focused conference series and custom research form the hub of the world's largest global IT media network.

This introduction to Nortel Networks should be essential to every network professional because it offers hands-on implementation techniques and real world case studies. Key features include an introduction to LAN and WAN technologies, an introduction to managing and maintaining devices using Nortel tools and an outline of the Nortel certification track and objectives. Blueprints map out sample network designs using Nortel products so it should function as a springboard for certification study.

Examines how foreign firms entering or operating in various Asian countries have responded to obstacles and opportunities in business.

acquisition, theories on the nature of human language in general, and descriptions of individual languages. The series welcomes publications addressing the state of the art of linguistics as a whole or of specific subfields, and publications that offer challenging new approaches to linguistics. This volume is the first one to illuminate diverse aspects of word formation from cognitive perspectives. Guided by methodological pluralism, the contributions shed light on a variety of issues in word formation theory and on the interfaces between word formation and phraseology, phonology, and inflection. The majority of the studies focuses on individual types of word formation, reframing our understanding of these processes. Overall, the various contributions add to a yet marginal body of research in cognitive word formation and advance our awareness about the benefits of applying cognitive linguistic thoughts for investigating processes of lexical creation.

processing gathered data or information, which will be used in various applications. Specifically, it explains data mining and the tools used in discovering knowledge from the collected data. This book is referred as the knowledge discovery from data (KDD). It focuses on the feasibility, usefulness, effectiveness, and scalability of techniques of large data sets. After describing data mining, this edition explains the methods of knowing, preprocessing, processing, and warehousing data. It then presents information about data warehouses, online analytical processing (OLAP), and data cube technology. Then, the methods involved in mining frequent patterns, associations, and correlations for large data sets are described. The book details the methods for data classification and introduces the concepts and methods for data clustering. The remaining chapters discuss the outlier detection and the trends, applications, and research frontiers in data mining. This book is intended for Computer Science students, application developers, business professionals, and researchers who seek information on data mining. Presents dozens of algorithms and implementation examples, all in pseudo-code and suitable for use in real-world, large-scale data mining projects Addresses advanced topics such as mining object-relational databases, spatial databases, multimedia databases, time-series databases, text databases, the World Wide Web, and applications in several fields Provides a comprehensive, practical look at the concepts and techniques you need to get the most out of your data Innovation is increasingly identified as the critical factor in ensuring economic

competitiveness. Departments of state and quasi-governmental organizations in many countries including, Austria, Australia, Canada, France, Germany, The Netherlands, Sweden and the UK, have issued reports and calls to action; but implementation will continue to be problematic unless the points made in this book are taken into account. Drawing on 350 in-depth interviews with senior managers, this book presents an original theory about the characteristics of managers in “good innovative organizations” and “poor innovative organizations”. It pays close attention to the attitudes, understandings, assumptions and interpretations of managers, who are often the ultimate decision-makers when it comes to innovation. The text is supported by real-life, internationally-known cases such as Hewlett-Packard, Zeneca and the BBC, as well as voluntary sector cases such as Oxfam. It is also enriched by substantial and highly revealing quotations from senior managers themselves.

This volume examines how foreign firms, which are entering or operating in various Asian countries, have responded to the obstacles and opportunities which were identified in the preceding volumes of this series. There is an overview chapter and seven case studies of Canadian and American-based businesses. The studies cover a variety of sectors such as telecommunication, finance, and engineering services. The authors highlight a range of issues that have to be resolved when operating in particular countries. The outcome of the bargaining process on entry into another country, for example, or the approach taken in personnel relations, can be critical to success or

Companies rarely track their performance against long-term plans, and results often fail to meet projections. When companies do track performance, it seldom matches the prior year's projection, and a great deal of value is lost in translation. This new title in The Economist series shows how businesses can overcome such failings and implement strategy effectively, using facts and anecdotal evidence from the real experiences of firms.

At the climactic close of the TV series of Star Trek Deep Space Nine the forces of the Federation and their allies finally overcame the Dominion invaders and averted the threat of totalitarian rule. And yet ... the future of the Alpha Quadrant is by no means as safe as it seems. Deep within the bowels of Deep Space Nine is a secret that has been kept for seven years. When it is uncovered the very heart of the Federation will be ripped apart, succeeding where the shapeshifting Founders failed. The destruction of the Federation is at stake. Only the crew of Deep Space Nine can stop it - but will they be in time?

Standardization of hardware description languages and the availability of synthesis tools has brought about a remarkable increase in the productivity of hardware designers. Yet design verification methods and tools lag behind and have difficulty in dealing with the increasing design complexity. This may get worse because more complex systems are now constructed by (re)using Intellectual Property blocks developed by third parties. To verify such designs, abstract models of the blocks and the system must be developed, with separate concerns, such as interface communication, functionality, and timing, that can be verified in an almost independent fashion. Standard Hardware Description Languages such as VHDL and Verilog are inspired by procedural 'imperative' programming languages in which function and timing are inherently intertwined in the statements of the language. Furthermore, they are not conceived to state the intent of the design in a simple declarative way that contains provisions for design choices, for stating assumptions on the environment, and for indicating

uncertainty in system timing. Hierarchical Annotated Action Diagrams: An Interface-Oriented Specification and Verification Method presents a description methodology that was inspired by Timing Diagrams and Process Algebras, the so-called Hierarchical Annotated Diagrams. It is suitable for specifying systems with complex interface behaviors that govern the global system behavior. A HADD specification can be converted into a behavioral real-time model in VHDL and used to verify the surrounding logic, such as interface transducers. Also, function can be conservatively abstracted away and the interactions between interconnected devices can be verified using Constraint Logic Programming based on Relational Interval Arithmetic. Hierarchical Annotated Action Diagrams: An Interface-Oriented Specification and Verification Method is of interest to readers who are involved in defining methods and tools for system-level design specification and verification. The techniques for interface compatibility verification can be used by practicing designers, without any more sophisticated tool than a calculator.

extraordinary true story of the computer underground, and the bizarre lives and crimes of an elite ring of international hackers who took on the establishment. Spanning three continents and a decade of high level infiltration, they created chaos amongst some of the world's biggest and most powerful organisations, including NASA and the US military. Brilliant and obsessed, many of them found themselves addicted to hacking and phreaking. Some descended into drugs and madness, others ended up in jail. As riveting as the finest detective novel and meticulously researched, *Underground* follows the hackers through their crimes, their betrayals, the hunt, raids and investigations. It is a gripping tale of the digital underground.
