The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and

institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Transition from student to professional with confidence. Stepping out of the classroom and into professional nursing practice can be stressful. This volume focuses on the activities on Health Telematics Education. In Europe, coordinated activities in healthcare informatics education started in the late 1980's with the establishment of European Courses in Health Teematics. At the same time the European Commission foresaw the need for spreading the knowledge of IT in the Healthcare Sector. Therefore the EC, since then, have supported the initiatives that aim to create awareness, stimulate diffusion, educate and train the users (healthcare professionals) in the application of Information Technology to the Healthcare Sector. Such an initiative is the NIGHTENGALE project

which is an essential project in the planning and implementation of strategy timing the Nursing profession in using and applying healthcare information systems, as well as, the IT EDUCTRA project which covers a more wide spectrum of the Health Telematics Education. The objective of this book is to promote the appropriate use of the developed Telematics infrastructure across Europe by educating and training healthcare professionals in a harmonising way across Europe in the upcoming field of Health and Nursing Informatics. For achieving this objective the European Commission established a series of European Conferences on Health Telematics Education, and Workshops by experts (users, developers and policymakers). In this book the Proceedings of the first European Conference in 'Health Telematics Education' (HTE'96), organised by the NIGHTINGALE project and supported by the IT EDUCTRA project, are included as well as the minutes and the presentations of the NIGHTINGALE Workshops. Results are presented of a study of nursing and nursing education that focused on the need for continued federal support of nursing education, ways to attract nurses to medically underserved areas, and approaches to encourage nurses to stay in the profession. Findings are presented on whether the aggregate supply of generalist nurses will be sufficient to meet future demand, and how changes that could occur in the health care system might affect demand. Attention is also directed to: how the current and future supply of nurses may be influenced by the costs of nursing education and the sources of education financing; and education for generalist positions in nursing. In addition, the supply and demand situation for nurses educationally

The working and career lives of teachers have changed radically over the last two decades. Reforms have turned education into a commodity and pupils into 'consumers'. Yet not since 1992 has there been a comprehensive overview of research findings on teachers' working lives. This anthology

Access Free Nursing Career Research Paper

plugs the gap by collecting various scholarly contributions and perspectives on teachers' career trajectories and work lives. The material includes an introduction to previous research within the field, presents a range of contemporary research and offers suggestions as to what lies ahead. Among the contributors are leading educational academics who describe a variety of national contexts, illustrating how problems and challenges relating to the teaching profession manifest themselves and are tackled in different countries. The anthology also shows just how many aspects of teachers' career trajectories and work lives transcend national boundaries. Common international themes include stronger ties between education and the economy, and a growing importance placed on how students' skills relate to the perceived needs of the labour market. There is also a greater degree of political interference in curriculum goals and processes, and an expanding obsession with evaluation. In many countries, a whole generation of teachers are reaching retirement age, 'changing the guard' with a crop of new young recruits who are ever harder to attract. At a time when there is an increasing focus on issues such as teacher recruitment, retention and professional development, this anthology offers insight and inspiration to teacher educators and educational policy makers as well as to current and prospective teachers. It also aims at encouraging research into the field of teachers' working lives.
