The second edition of the Handbook of Adult Clinical Psychology: An Evidence Based Practice Approach like its predecessor provides clinical psychologists in training with a comprehensive practice handbook to help build the skills necessary to complete a clinical placement in the field of adult mental health. While practical in orientation, the book is based solidly on empirical evidence. Building on the success of the previous edition this handbook has been extensively revised in a number of ways. Throughout the book, the text, references, and website addresses and have been updated to reflect important developments since the publication the first edition. Recent research findings on the epidemiology, aetiology, course, outcome, assessment and treatment of all psychological problems considered in this volume have been incorporated into the text. Account has been taken of changes in the diagnosis and classification of psychological problems reflected in the DSM-5. Chapters on ADHD in adults, emotion focused therapy, radically open dialectical behaviour therapy, and schema therapy have been added. The book is divided into 6 sections: Section 1 covers conceptual frameworks for practice (lifespan development; classification and epidemiology; CBT, psychodynamic, emotion focused, systemic and bio-medical models; and general assessment procedures) Section 2 deals with mood problems (depression, bipolar disorder, suicide risk, and anger management) Section 3 focuses on anxiety problems (social phobia,

generalized anxiety disorder, panic disorder, obsessive compulsive disorder, post-traumatic stress disorder and depersonalization disorder) Section 4 deals with psychological problems linked to physical health (health anxiety, somatization, chronic pain, adjustment to cancer, and eating disorders) Section 5 focuses on other significant psychological problems that come to the attention of clinical psychologist in adult mental health services (ADHD in adults, alcohol and other drug problems, psychosis, and psychological problems in older adults) Section 6 contains chapters on therapeutic approaches to psychological distress related to complex childhood trauma (dialectical behaviour therapy for borderline personality disorder, racially open dialectical behaviour for over-controlled presentations, and schema therapy). Each of the chapters on clinical problems explains how to assess and treat the condition in an evidence-based way with reference to case material. Interventions from cognitive-behavioural, psychodynamic, interpersonal/systemic and biomedical approaches are described, where there is evidence that they are effective for the problem in question. Skill building exercises and further reading for psychologists and patients are included at the end of each chapter. This book is one of a set of three volumes which cover the lion's share of the curriculum for clinical psychologists in training in the UK and Ireland. The other two volumes are the Handbook of Child and Adolescent Clinical Psychology, Third Edition (by Alan Carr) and the Handbook of Intellectual Disability and Clinical Psychology Practice, Second Edition edited by Alan Carr, Christine Linehan, Gary O'Reilly, Patricia

Contributors: Michael Baksh, Amanda Clarke, Elizabeth Cooper, James Greaves, Dasha Koneva, Jane Quigley, Victoria Ridgway, Dr Carol Lewis-Roylance, Pat Talbot, Richard Williams, Mary Williams. "This book is aimed at students, but I am sure that it has an audience beyond that - we all need help and encouragement to write. Full of practical advice and examples, this book will help you to find a writing strategy that works for you and to develop our own style. Some simple but very effective ideas are used such as: making writing a normal activity; just keeping going; and not necessarily starting at the beginning." Roger Watson, Professor of Nursing, University of Hull, UK

"The focus of this book is on how to write well. As I have argued previously, we all need to be reminded of the skills required in order to make a difference to our patient, clients and their carers' lives. Lifelong learning is the way that we update our knowledge, skills and competencies. But in order to do this effectively we need to have the right skill set. The ability to write well is fundamental to our personal and professional learning, and this is regardless of what stage we are in our careers. Writing is a skill that we use every day, be it an email to a friend or an assignment for a course. With practice we

can develop and refine this essential skill. I particularly like the way the authors encourage us to be critical of our writing; this is also something that we can offer to others as critical friends." Sian E Maslin-Prothero, Professor of Nursing (Clinical), School of Nursing & Midwifery and Sir Charles Gairdner Hospital, Edith Cowan University, Western Australia

It focuses on computer applications relevant to clinical psychiatric practice, including all the new tools for assimilating and managing the requisite knowledge, facilitating the required documentation, and providing clinical service.
