The American health care system is a unique mix of public and private programs that critics argue has produced a two-tier system - one for the rich and the other for the poor - that delivers dramatically unequal care and leaves millions of Americans seriously underinsured or with no coverage at all. This book examines the root causes of the inequalities of the American health care system and discusses various policy alternatives. It systematically documents the demands on and the performance of our health care system for different population groups as defined on the basis of gender (women), age (children), race and ethnicity (African Americans, Hispanics, Native Americans), and residence in high poverty areas (rural and inner city locales). For each population, the book documents: historical and demographic profile, data on health status, aspects of inequality including access; quality of care; and endemic, cultural, and lifestyle issues affecting health; policies, laws, and programs relevant to health care; and, indicators of improvement or negative trends.

"Nurses play a vital role in improving the safety and quality of patient care -- not

only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)."--Online AHRQ blurb, <http://www.ahrq.gov/qual/nursesfdbk>.

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership

Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. Results are presented of a study of nursing and nursing education that focused on the need for continued federal support of nursing education, ways to attract nurses to medically underserved areas, and approaches to encourage nurses to stay in the profession. Findings are presented on whether the aggregate supply of generalist nurses will be sufficient to meet future demand, and how changes that could occur in the health care system might affect demand. Attention is also directed to: how the current and future supply of nurses may be influenced by the costs of nursing education and the sources of education financing; and education for generalist positions in nursing. In addition, the supply and demand situation for nurses educationally prepared for advanced professional positions in nursing

is examined. The influence of employer policies and practices in utilization of nursing resources on demand and supply is also addressed. Finally, areas in which further data and studies are needed to better monitor nursing supply and demand are identified. In addition to 21 recommendations, appendices include information on Nursing Training Act appropriations, state reports on nursing issues, certificates for specialist registered nurses, projections of registered nurse supply and requirements, and doctoral programs in nursing. Nursing is a growing area of higher education, in which an introduction to statistics is an essential component. There is currently a gap in the market for a 'user-friendly' book which is contextualised and targeted for nursing. It also provides sufficient advice in areas such as clinical trials and epidemiology to enable the reader to critically appraise work published in journals such as the Lancet and British Medical Journal. * Covers all basic statistical concepts and tests * Is user-friendly - avoids excessive jargon * Includes relevant examples for nurses, including case studies and data sets * Provides information on further reading * Starts from first principles and progresses step by step * Includes 'advice on' sections for all of the tests described

The decade ahead will test the nation's nearly 4 million nurses in new and complex ways. Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they represent the largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest possible life, and helping people live their healthiest life is and has always been

the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy. Accordingly, at the request of the Robert Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and health care systems that are designed to work for everyone. The *Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity* explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and family-focused care into 2030. This work builds on the foundation set out by *The Future of Nursing: Leading Change, Advancing Health* (2011) report. This is the first practical guide for nurses on how to incorporate the knowledge, skills, and tools of Strength-Based Nursing Care (SBC) into everyday practice. The text, based on a model developed by the McGill University Nursing Program, signifies a paradigm shift from a deficit-based model to one that focuses on individual, family, and community strengths as a cornerstone of effective nursing care. The book develops the theoretical foundations underlying SBC, promotes the acquisition of fundamental skills needed for SBC practice, and offers specific strategies, techniques, and tools for identifying strengths and harnessing them to facilitate healing and health. The testimony of 46 nurses demonstrates how SBC can be

Suffering is an unavoidable reality in health care. Not only are patients and families suffering but also the clinicians who care for them. Commonly the suffering experienced by clinicians is moral in nature, in part a reflection of the increasing complexity of health care, their roles within it, and the expanding range of available interventions. Moral suffering is the anguish that occurs when the burdens of treatment appear to outweigh the benefits; scarce human and material resources must be allocated; informed consent is incomplete or inadequate; or there are disagreements about goals of treatment among patients, families or clinicians. Each is a source of moral adversity that challenges clinicians' integrity: the inner harmony that arises when their essential values and commitments are aligned with their choices and actions. If moral suffering is unrelieved it can lead to disengagement, burnout, and undermine the quality of clinical care. The most studied response to moral adversity is moral distress. The sources and sequelae of moral distress, one type of moral suffering, have been

documented among clinicians across specialties. It is vital to shift the focus to solutions and to expanded individual and system strategies that mitigate the detrimental effects of moral suffering. Moral resilience, the capacity of an individual to restore or sustain integrity in response to moral adversity, offers a path forward. It encompasses capacities aimed at developing self-regulation and self-awareness, buoyancy, moral efficacy, self-stewardship and ultimately personal and relational integrity. Clinicians and healthcare organizations must work together to transform moral suffering by cultivating the individual capacities for moral resilience and designing a new architecture to support ethical practice. Used worldwide for scalable and sustainable change, the Conscious Full Spectrum approach, offers a method to solve problems to support integrity, shift patterns that undermine moral resilience and ethical practice, and source the inner potential of clinicians and leaders to produce meaningful and sustainable results that benefit all.

This Core Curriculum is the culmination of many years of research, drawing from the fields of social and behavioral science, philosophy, and nursing to establish a core of knowledge that supports transcultural nursing practice. Editors Marilyn K. Douglas, DNSc, RN, FAAN, and Dula F. Pacquiao, EdD, RN, CTN, note in their preface, “Transcultural nursing practice incorporates education, research, administration and direct care provision within the multilevel contexts of the individual, organization, community, society and the world as a whole. The goal of TCN [transcultural nursing] practice is to promote health and well-being of

individuals and populations by reducing health and care disparities through culturally congruent and competent approaches at the multilevel contexts of care.” The Core Curriculum was originally published as a supplement to the October 2010 issue of the Journal of Transcultural Nursing and is published as a package with that issue.
