Individuals with disabilities, chronic conditions, and functional impairments need a range of services and supports to keep living independently. However, there often is not a strong link between medical care provided in the home and the necessary social services and supports for independent living. Home health agencies and others are rising to the challenges of meeting the needs and demands of these populations to stay at home by exploring alternative models of care and payment approaches, the best use of their workforces, and technologies that can enhance independent living. All of these challenges and opportunities lead to the consideration of how home health care fits into the future health care system overall. On September 30 and October 1, 2014, the Institute of Medicine and the National Research Council convened a public workshop on the future of home health care. The workshop brought together a spectrum of

public and private stakeholders and thought leaders to improve understanding of the current role of Medicare home health care in supporting aging in place and in helping high-risk, chronically ill, and disabled Americans receive health care in their communities. Through presentations and discussion, participants explored the evolving role of Medicare home health care in caring for Americans in the future, including how to integrate Medicare home health care into new models for the delivery of care and the future health care marketplace. The workshop also considered the key policy reforms and investments in workforces, technologies, and research needed to leverage the value of home health care to support older Americans, and research priorities that can help clarify the value of home health care. This summary captures important points raised by the individual speakers and workshop participants.

Among the issues confronting America is long-term care for frail, older persons and others with chronic conditions and functional limitations that limit their ability to care for themselves. Improving the Quality of Long-Term Care takes a comprehensive look at the quality of care and quality of life in long-term care, including nursing homes, home health agencies, residential care facilities, family members and a variety of others. This book describes the current state of long-term care, identifying problem areas and offering recommendations for federal and state policymakers. Who uses long-term care? How have the characteristics of this population changed over time? What paths do people follow in long term care? The committee provides the latest information on these and other key questions. This book explores strengths and limitations of available data and research literature especially for settings other than nursing homes, on methods to measure, oversee, and improve the quality of long-term care. The committee makes recommendations on setting and enforcing standards of care, strengthening the caregiving workforce, reimbursement issues, and expanding the knowledge base to guide organizational and individual caregivers in improving the quality of care.

In addition, with the updated HCFA home health agency manual coverage as well as coverage and documentation guidelines, forms may be completed with knowledge of the latest Medicare rules. Best of all, the OASIS-B form, which is hot off the press, is included in its entirety!

"The Postacute Care Guide to Maintenance Therapy "contains regulatory information, analysis, and advice for maintenance therapy care and documentation in postacute settings.

The Medicare program enables millions of beneficiaries to obtain health care services; however, lacks many of the essential elements of a high-quality, high-value and efficient health system. Program spending and utilisation have increased substantially, without corresponding improvements in beneficiaries' health. This new and important book describes the need for Medicare to move away from payment policies that encourage service volume and are indifferent to quality and toward policies that promote better value for Medicare and its beneficiaries.

"This 5th edition is an important achievement; it is a symbol of commitment to the field of palliative nursing, where we have been and where we are going." - Betty Rolling Ferrell, PhD, MA, FAAN, FPCN, CHPN From the Foreword The aging population has only grown since the first edition of this comprehensive and seminal publication nearly 20 years ago. Based on the need to humanize rather than medicalize the illness experience for patients, this text delves into palliative care beyond the specific diseases affecting the patient. Instead, content focuses on the whole person and family. Palliative patients struggle with chronic, debilitating, and painful conditions, and grapple with the fact that life as they knew it has already passed away. Families and friends reciprocally suffer, not knowing how to help and therefore become the secondary victims of the disease. This is not the challenge of a lone nurse, or a single physician, therapist, or social worker. Rather, palliative and hospice care requires the expertise and unique roles of an interprofessional team to help the patient and family strengthen their resilience, continue to find meaning and purpose in life, and cure what can be cured. Palliative Care Nursing, Fifth Edition, delivers advanced empirical, aesthetic, ethical and personal knowledge. This new edition brings an increased focus on outcomes, benchmarking progress, and goals of care. It expounds upon the importance of the cross-disciplinary collaboration introduced in the previous edition. Every chapter in Sections I, II, and III includes content written by a non-nursing member of the interprofessional team. Based on best-evidence and clinical practice guidelines, this text presents comprehensive, targeted interventions responsive to the needs of palliative and hospice patients and family. Each chapter contains compassionate, timely, appropriate, and cost-effective care for diverse populations across the illness trajectory. Key Features The expanded new edition offers current, comprehensive, one-stop source of highly-relevant clinical information on palliative care Life-span approach: age-appropriate nursing considerations (e.g. geriatric, pediatric and family) Includes disease-specific and symptom-specific nursing management chapters Promotes a holistic and interdisciplinary approach to palliative care Offers important legal, ethical and cultural considerations related to death and dying Case Studies with Case Study Conclusion in each clinical chapter New to The Fifth Edition: An expanded chapter on Palliative Care incorporates most up to date scope and standards, information on Basic and Advanced HPNA certification, self-reflection and self-care for nurses. A chapter on Interprofessional Collaboration Instructor Resources: Power points and Test bank

The aim of this CNL Internship Project is to improve the admission and discharge assessments of a home care agency in order to boost agency's star ratings. The project is being carried out within a home care agency in Northern California. The multidisciplinary team provides services in the patients' place of residence, an ever-changing setting. The project follows a train-the-trainer approach beginning with self-paced learning of the OASIS format. The trainee will conduct an admission, also known as start of care (SOC), assessment followed by trainer critique and advisement. Establishing a rapport early will aid the assessment process. Face-to-face assessment follows a review of systems that includes both interview and observation. This project has experienced many stopgaps due to scheduling constraints. An unexpected challenge has been the reluctance of staff to participate. This project is ongoing therefore no results are available to evaluate at this time. Given the many moving parts related to the star rating it will likely be at least a year before they reflect this projects' efforts. As an application in healthcare reform the OASIS is still relatively new. Research on its overall impact on the delivery of care is limited. CMS representatives state the implications star rating may have for future reimbursement and encourage OASIS training, however no evidence-based practice can be found on how home care agencies can best approach OASIS and its anticipated revisions.

2015 Third Edition. 205 pages. 136 Home Health Nursing Care Plans with 39 Medication Care Plans in the book and on the CD. 23 Skilled Charting Guidelines. The Home Health nursing care plans and plan of care forms in this book cover every nursing diagnosis and care plan problem that may be generated from the OASIS-C form for the nursing plan of care. Also includes Pain Care manual. Terminology is based on OASIS-C language and nursing diagnosis definitions and classifications as outlined by the North American Nursing Diagnosis Association (NANDA). The home health nursing care plan format follows the care plan standards from the American Nurses Association. The first section of the book covers regulations and standards for nursing care plans, Home Health Nursing care plan components, and Quality Measures and Outcome Measures. Because the terminology of the home health nursing care plan is based on OASIS-C language, it is very easy to see which care plans and plan of care forms are triggered by the OASIS-C entries. The home health nursing care plans can be used to supplement the nursing plan of care, and are also extremely useful for teaching patients and caregivers.

An Interdisciplinary Approach to Homecare Improve patient care through interdisciplinary teamwork Medicare is not concerned with outcomes specific to therapy, nursing, or social work. Since payments are based on the overall patient outcome, agencies need to encourage disciplines to work together to achieve the desired end results. Cindy Krafft, PT, MS, helps you develop a collaborative, interdisciplinary approach to patient care. You'll learn to make proper use of previously collected OASIS-C data to draft effective and thorough care plans that benefit your agency and its patients. Benefit from this book by: Ensuring collaborative patient care by communicating with members of the interdisciplinary team (IDT) despite infrequent face-to-face interactions Taking advantage of information you already possess--such as OASIS-C documentation--to drive the care planning process Establishing care conference best practices to make them effective and efficient Determining medical necessity through an understanding of the viewpoint of other disciplines Initiating appropriate referrals to other services as indicated Removing the task-oriented mind-set prevalent in agencies today and develop patient care plans with input from the entire IDT Table of Contents Chapter 1: The Changing Healthcare Environment Chapter 2: Defining Homecare: The Clinician's Perspective Chapter 3: What Are We Trying to Manage? Chapter 4: Putting Together the Team Chapter 5: Choosing a Road Map: Care Management and OASIS Chapter 6: Communication Chapter 7: Collaboration Chapter 8: Documentation Chapter 9: The Future of Care Management Chapter 10: Specific Roles and Disciplines Chapter 11: Leadership and Office Staff Chapter 12: Nursing Chapter 13: Physical Therapy Chapter 14: Occupational Therapy Chapter 15: Speech Language Pathology Chapter 16: Medical Social Work Chapter 17: Home Health Aide Appendix
