**#1 NEW YORK TIMES BESTSELLER** When and how did the universe begin? Why are we here? What is the nature of reality? Is the apparent “grand design” of our universe evidence of a benevolent creator who set things in motion—or does science offer another explanation? In this startling and lavishly illustrated book, Stephen Hawking and Leonard Mlodinow present the most recent scientific thinking about these and other abiding mysteries of the universe, in nontechnical language marked by brilliance and simplicity. According to quantum theory, the cosmos does not have just a single

existence or history. The authors explain that we ourselves are the product of quantum fluctuations in the early universe, and show how quantum theory predicts the “multiverse”—the idea that ours is just one of many universes that appeared spontaneously out of nothing, each with different laws of nature. They conclude with a riveting assessment of M-theory, an explanation of the laws governing our universe that is currently the only viable candidate for a “theory of everything”: the unified theory that Einstein was looking for, which, if confirmed, would represent the ultimate triumph of human reason.

learning the computer concepts. • Try It. Hands-on practice activities provide brief procedures to teach all necessary skills. • Practice. These projects give students a chance to create documents, spreadsheets, database objects, and presentations by entering information. Steps provide all the how-to information needed to complete a project. • Apply. Each lesson concludes with a project that challenges students to apply what they have learned through steps that tell them what to do, without all the how-to information. In the Apply projects, students must show they have mastered each skill set. • Each chapter ends with two assessment projects, Critical Thinking and Portfolio Builder, which incorporate all the skills covered throughout the chapter.
