Vols. for 1970-71 includes manufacturers' catalogs. "Four Wheels - Good! Two Wheels - Better!" Roaring out of the Desert and across the Seas comes the true story of a Broken Hill boy who found thrills, adventure and romance in a life of speed, power and Pride!

Thoroughly updated and greatly expanded for its Second Edition, this highly acclaimed atlas is a comprehensive, state-of-the-art reference on all aspects of transesophageal echocardiography (TEE). It features more than 2,300 illustrations-over 1,100 in full color-that demonstrate the full spectrum of findings observed in acquired and congenital cardiac diseases. This edition has two new chapters on transpharyngeal ultrasound and three-dimensional transesophageal echocardiography. All other chapters have been updated with emphasis on the latest techniques.

This report is a summary of the status, completed in December 1966, of the Apollo lunar landing program prior to the tragic deaths of Astronauts Grissom, White, and Chaffee preparing for the first manned Apollo flight. This tragic accident will undoubtedly affect to some extent both the schedule and cost of the Apollo program. However, it does not alter the basic conclusions contained in this report, nor the analysis provided. Nonhuman Primates and Medical Research focuses on the contributions of nonhuman primates to biomedical

research. The selection first elaborates on monkeys and yellow fever, cell cultures, and tuberculosis and bacterial infection. Discussions focus on bacterial diseases, tuberculosis, radiobiology, antibody formation and pharmacologic studies, cell-culture media and methods, the rhesus monkey and early history of yellow fever research, and monkeys and yellow fever in the future. The text then elaborates on virus research, models for investigation in parasitology, and primates as organ donors in transplantation studies in man. The manuscript examines the importance of monkeys for the study of malignant tumors in man; use of primates in cardiovascular research; and humanlike diseases in anthropoid apes. Topics include etiology of humanlike disease in anthropoid apes, atherosclerosis, historical aspects of primate research, selection of a suitable primate, and preeclampsia. The text also ponders on primate studies and human evolution and mental retardation. The selection is a valuable reference for researchers interested in the contributions of nonhuman primates to biomedical research.

This massive work took seventeen years to complete, and must stand as a seminal work of meticulous history. More than a history, it is an analysis of the railways and their role in the history of Nigeria as a country. It was the railways that carried agricultural products to the ports; that moved people at relatively little cost over long distance for trade and occupational pursuits; that gave support and strength to military operations and the movement of heavy duty equipment and materials needed for industrial works and

development. The railways were the life-line of national economic development, and the pioneers in the opening up of the country to development and contact with the outside world. The three volumes explore the systems from their beginnings in the 1890s to the closing decades of the twentieth century. Over 300 illustrations illuminate the volumes. There is introductory material on exploration, geography and demography, the basics of the railway system, and a description of the assets, fuel examination and water supply exploration. The economic and political history of each of the nine railway and tramway systems is given. Operational facilities and commercial practice are each described within historical perspective. The whole is summed up under organisations, accounts and statistics, staff and industrial relations, and short biographies of departmental heads. The author spent forty-seven years in Nigeria, including twenty-seven serving to Nigeria's history.

Popular with generations of practitioners, Brocklehurst's Textbook of Geriatric Medicine and Gerontology has been the definitive reference of choice in the field of geriatric care. The new 7th Edition, by Howard M. Fillit, MD, Kenneth Rockwood, MD, and Kenneth Woodhouse, carries on this tradition with an increased clinical focus and updated coverage to help you meet the unique challenges posed by this growing patient population. Consistent discussions of clinical manifestations, diagnosis, prevention, treatment, and more make reference quick and easy, while over 255 illustrations compliment the text to help you find what you need on a given condition. Examples of the latest imaging studies depict the effects of aging on the brain, and new algorithms further streamline decision making. Emphasizes the clinical relevance of the

latest scientific findings to help you easily apply the material to everyday practice. Features consistent discussions of clinical manifestations, diagnosis, prevention, treatment, and more that make reference quick and easy. Includes over 255 illustrations—including algorithms, photographs, and tables—that compliment the text to help you find what you need on a given condition. Provides summary boxes at the end of each chapter that highlight important points. Features the work of an expert author team, now led by Dr. Howard M. Fillit who provides an American perspective to complement the book's traditional wealth of British expertise. Includes an expanded use of algorithms to streamline decision making. Presents more color images in the section on aging skin, offering a real-life perspective of conditions for enhanced diagnostic accuracy. Includes examples of the latest imaging studies to help you detect and classify changes to the brain during aging. Offers Grade A evidence-based references keyed to the relevant text.

The use of ultrasound for various diagnostic techniques in medicine continues to increase in popularity and complexity. It seems possible that the prediction of the National Science Foundation that ultrasonic techniques may be used as frequently as X-ray techniques by the end of the decade may indeed be fulfilled. The annual scientific meeting of the American Institute of Ultrasound in Medicine is the only meeting held regularly on the North American continent and devoted solely to the diagnostic use of ultrasound. Under these circumstances it is not surprising to find that both the attendance at these meetings and the number of papers submitted for presentation, are increasing markedly each year. The papers presented at these meetings probably reflect the "state-of-the-Art" reasonably accurately. The Proceedings of these annual meetings are therefore a valuable record of the current state of ultrasonic diagnostic

techniques in the U.S.A. Even though it is not possible to print in extenso every paper presented at the meeting, an attempt has been made with this volume, by increasing the length of the papers printed in abstract form, to enable the reader to obtain an overall view of current developments and research on this continent in all fields of ultrasonic medical diagnostic technology. Speed of publication is essential if this volume is to contain current information.

This report presents the: (1) reliability analysis, (2) design requirements, (3) major design and development aspects of the pyro-actuated valves (isolation and repressurization) which are in integral use on the LMSD 1319348-501 Repressurization Control System.

This textbook is designed for students in the laboratory portion of a one or two term course in anatomy and physiology. It contains fifteen units, each consisting of a purpose, objective, materials, procedures, self-test, case studies, and short answer questions. Unit topics include: medical terminology, the microscope, cells, tissues, acid-base ba

This basic source for identification of U.S. manufacturers is arranged by product in a large multi-volume set.

Includes: Products & services, Company profiles and Catalog file.
