

Oral Healthcare And The Frail Elder A Clinical Perspective

Recent demographic trends in the Latin American and Caribbean (LAC) region will shape the growth and age composition of its populations for decades to come. The rapid mortality decline that began during the 1950s, and the more recent and even sharper reduction in fertility, will produce unusually high rates of growth of the older population, a large change in overall population age composition, and significant increases in the ratio of older to younger population. According to the 2013 United Nations projections, the number of people aged 60 and over in LAC is expected to increase from 59 million in 2010 to 196 million in 2050, and the number of people aged 80 and over will increase from 8.6 million to more than 44 million during the same period. To explore the process of rapid aging in the LAC, a workshop took place at the National Academy of Medicine in May 2015. Participants of the workshop presented scientific research emphasizing what is unique about aging in LAC and what is similar to other processes around the world, highlighted the main areas where knowledge of the aging process in LAC is insufficient and new research is required, and proposed data collection that will produce information for policymaking while being responsive to the needs of the research community for harmonized, highly comparable information. The workshop afforded participants an opportunity to consider strategies for articulating data collection and research in the region so that country-based teams can reap the benefits from being part of a larger enterprise while simultaneously maintaining their own individuality and responding to the particular needs of each country. Strengthening the Scientific Foundation for Policymaking to Meet the Challenges of Aging in Latin America and the Caribbean summarizes the presentations and discussions of the workshop.

This book is a printed edition of the Special Issue "Dietary Protein and Muscle in Aging People" that was published in *Nutrients*

Removable Partial Dentures: A Clinician's Guide is a highly practical step-by-step guide to the diagnosis, treatment planning, and manufacture of removable partial prostheses. Through its systematic approach, the book demystifies the clinical practice of these procedures, providing the practitioner with essential information on this common modality for partially edentulous patients. This clinical manual offers easy-to-follow instruction on removable partial dentures, thoroughly outlining this technique in a practical format. Aimed at the new dental professional, *Removable Partial Dentures* provides key information for general dentists and prosthodontists. This contributed volume is based on the "European Core Competences Framework for health and social care professionals working with older people" (ECCF), developed and verified in a

unique international cooperation between 26 universities and universities of applied sciences in 25 European countries, part of the European Later Life Active Network (ELLAN). In addition to the framework, the book outlines the necessary qualifications and describes the roles of professionals working with older people in health and social services. It explores healthy ageing for older people from different perspectives and describes the seven roles of health and social care professionals (Expert, Communicator, Collaborator, Organizer, Health and Welfare Advocate, Scholar, and Professional), before going on to define 18 related competences and elaborating them in performance indicators. Beyond the ECCF, the book explains the widely used CanMED role model and puts forward theories to support a client centered and integrated approach on health and social care in order to change attitudes toward older clients and offer better care and support. It also provides health and social care professionals, for example nurses, allied health professionals and social workers with new contextual information and cultural awareness. It gives a voice to students by addressing selected perspectives for professional development. The book includes questions for reflective learning helping to make the book a vital practical instrument for use in the educational context throughout Europe. Europe's ageing populations represent a major challenge for both public health and social care systems. 18% of the population is 65 years old and over, and this proportion will increase in the coming years. As a result, more and more health and social care professionals will work with older people in different settings – at home, in the community, in hospitals or in long-term care settings. Older people, and especially the frail, face a host of interrelated issues, e.g. cognitive restrictions, functional restrictions, psychosocial problems, multimorbidity, polypharmacy and social isolation. These problems call for an integrated approach to health and social care, which this book supplies. It is intended for health and social care professionals, students and educators, for a better understanding of Europe's ageing society and of the impact on care and services. Furthermore, the ECCF offers educational institutes a unique resource for curriculum development, education, training and assessment.

Dental Caries is a major new work on a subject of vital concern to all dentists. It builds on the work of two former books, Textbook of Clinical Cariology and Fluoride in Dentistry, to present a definitive resource on caries prevention and treatment. The management of dental caries is central to daily work in dental offices because caries is ubiquitous in all populations, lesion development continues lifelong and caries is the most common cause of tooth loss around the world. The book's logical structure consists of four parts, covering: The Disease; Diagnosis; Prevention, Non-Operative and Operative Treatment and Prognosis. It provides a clear understanding of the disease process, be it at an individual or population level. The Editors are joined by 28 expert authors who have contributed a wealth of chapters, ranging from the role of fluorides to restoring the tooth. Careful balance between prophylaxis and surgical intervention guides the reader through the maze of treatment decisions, while the breadth of the book reflects diverse, and sometimes controversial, opinion on dental caries.

Public Health Nursing: Practicing Population-Based Care, Third Edition is a comprehensive resource for students and faculty interested in public health nursing and education.

Covering the functional and esthetic needs of edentulous patients, *Prosthodontic Treatment for Edentulous Patients: Complete Dentures and Implant-Supported Protheses*, 13th Edition helps you provide complete dentures, with and without dental implant support. It addresses both the behavioral and clinical aspects of diagnosis and treatment and covers treatment modalities including osseointegration, overdentures, implant-supported fixed prosthesis, and the current and future directions of implant prosthodontics. New to this edition are full-color photographs and coverage of immediately loaded complete dental protheses. From lead editor and respected educator George Zarb, *Prosthodontic Treatment for Edentulous Patients* provides an atlas of clinical procedures and emphasizes the importance of evidence-based treatment. Short, easy-to-read chapters cover the essentials of care for both short- and long-term patients, stressing the importance of evidence-based treatment. Expanded coverage of implant prosthodontics addresses the clinical protocols for implant-retained and implant-supported prosthodontic management. Specific chapters address the three surfaces of the complete denture: (1) an impression or intaglio surface, (2) a polished surface, and (3) an occlusal surface, the integration of which is crucial to creating a stable, functional, and esthetic result. Chapter on health and nutrition examines a number of systemic conditions (vesciculoerosive conditions, systemic lupus erythematosus, burning mouth syndrome, salivary dysfunction, Sjögren's syndrome, hyper/hyposalivation, diabetes) that affect the oral cavity and specifically influence the prognosis for wearing complete dentures or for accepting osseointegrated protheses. Chapter on the time-dependent changes which occur in the oral cavity focuses on both time-related direct (ulcer/cheek biting, irritation hyperplasia, denture stomatitis, flabby ridge and pendulous maxillary tuberosities, hyperkeratosis and oral cancer, residual ridge reduction) and indirect (atrophy of masticatory muscles, nutritional status and masticatory function, control of sequelae) changes in the oral environment, and provides strategies to minimize the risk of such changes. Chapter on the techniques used to prolong the life of complete dentures focuses on the two techniques used to extend the life of dentures: relining and rebasing, also touching on denture duplication. Well-respected editors and contributors are the leaders in their field, lending credibility and experience to each topic.

This best-seller in geriatrics is even better in an updated and completely revised new edition. *Geriatric Secrets* provides a substantial knowledge base in geriatric medicine and provides a wealth of insights into the art and practice of geriatrics, featuring all the most important "need to know" questions and answers in the proven format of the *Secrets Series*®. 2016 First-Place Winner in Gerontological Nursing! “The evidence-based protocols are designed as a primary reference and are useful, substantive, and timely....The broader contributions of useful format and succinct review of the evidence make it likely that this text will continue to be the leading resource in nursing education and practice.” —The Gerontologist “As a gerontological clinical educator/research nurse, I will often use this as a reference. The format and the content are good, and the explanations of how to best use the evidence simplify the process of sifting through mountains of information to figure the best practice.” Score: 97,**** —Doody’s The newest edition of this distinguished reference in geriatric nursing delivers updated guidelines, new illustrative case studies, and the latest evidence-based protocols developed by leading researchers, educators, and practitioners in each topic area. The sixth edition includes new approaches devoted to supporting LGBTQ+ elders, persons living with dementia and their families, and older adults living with HIV. New operational strategies provide guidance in using the electronic health record, implementing improved person-centered care approaches, and maintaining age-friendly atmospheres. Using evidence derived from all levels of care, this text offers developed guidelines for improving both quality and outcomes when caring for older adults in multiple disciplines, including interprofessional team members, long-term care and other staff educators, social workers, dietitians, and physicians. Chapters provide assessment and management principles, clinical interventions, specialty practice, and models of care. They consistently feature chapter objectives, annotated references, evidence ratings for each protocol, and resources for further investigation. Each protocol is embedded within the chapter content to provide context and detailed evidence. The protocols consistently include an overview, evidence-based assessment, intervention strategies, and a supporting case study with discussion. PowerPoint presentations and a test bank are available as instructor’s resources. New Chapters: Informational Technology: Embedding CPGs Organizational Approaches to Promote Person-Centered Care Environmental Approaches to Support Aging-Friendly Care HIV Prevention and Care for the Older Adult LGBTQ+ Perspectives Key Features: Best practices for in-patient, in-home, and long-term care settings Case studies with discussions in each chapter to illustrate application of clinical practice and related Nursing Standard of Practice Protocol The AGREE systematic method was used to evaluate each protocol and validate this book’s content Instructor’s resources including PowerPoints and a Test Bank Purchase includes digital access for use on most mobile devices and computers Grounded in the core competencies recommended by the AACN in collaboration with the Hartford Institute for Geriatric Nursing, Ebersole & Hess’ Toward Healthy Aging, 8th Edition is the most comprehensive resource on health promotion and maintenance for older adults and their caregivers. With coverage of communication, safety and ethical considerations, new genetic research, key aging issues, and common and uncommon conditions, you will have the knowledge you need to promote healthy lifestyle choices, properly address end-of-life issues, and provide effective, holistic care for older adults. Consistent chapter organization with objectives, case studies with critical thinking questions, and research questions make information easy to access and use. A strong focus on health and wellness emphasizes a positive approach to aging. Disease processes are discussed in the context of healthy adaptation, nursing support, and responsibilities. Research highlights help incorporate the latest research

findings into practice. Nutrition chapter includes the most current guidelines for older adults and addresses patients' dietary needs. Scales and guidelines for proper health assessment provide the essential information for assessing the older adult patient. Case studies with critical thinking questions offer realistic situations to expand your knowledge and understanding. Careful attention to age, cultural, and gender differences are integrated throughout and highlight important considerations when caring for older adults. Content grounded in the core competencies offers the knowledge needed to achieve the National League for Nursing ACES program's Essential Nursing Actions and meets the Recommended Baccalaureate Competencies and Curricular Guidelines for the Nursing Care of Older Adults, the Geriatric Nursing Education State of the Science Papers, and the Hartford Institute for Geriatric Nursing Best Practices in Nursing Care to Older Adults. NEW! QSEN content highlights quality and safety issues students need to know when treating older patients. NEW! Chapter covering the role of communication emphasizes the importance of communication in improving care. NEW! Focus on genetics highlights the vast amount of new genetic research and its effects on all aspects of health and aging. NEW! Information on ethical considerations explores and illustrates potential issues when dealing with older adults. NEW! Healthy People 2020 information assists your students in integrating their knowledge about healthy aging considerations into care.

Access to oral health services is a problem for all segments of the U.S. population, and especially problematic for vulnerable populations, such as rural and underserved populations. The many challenges to improving access to oral health services include the lack of coordination and integration among the oral health, public health, and medical health care systems; misaligned payment and education systems that focus on the treatment of dental disease rather than prevention; the lack of a robust evidence base for many dental procedures and workforce models; and regulatory barriers that prevent the exploration of alternative models of care. This volume, the summary of a three-day workshop, evaluates the sufficiency of the U.S. oral health workforce to consider three key questions: What is the current status of access to oral health services for the U.S. population? What workforce strategies hold promise to improve access to oral health services? How can policy makers, state and federal governments, and oral health care providers and practitioners improve the regulations and structure of the oral health care system to improve access to oral health services?

Comprises thirteen chapters contributed by renowned economic geologists from three continents. This book highlights the recent advances made in the understanding of the temporal and tectono-stratigraphic distribution of sediment-hosted Pb-Zn sulphide ores and processes governing their genesis. The first section deals comprehensively with some of the most important deposits of this class in Canada and Australia, emphasizing their genetic models. It also contains a paper on 'geoenvironmental model', which concerns the environmental behaviour of this deposit type and other massive sulphides a) prior to mining, and b) resulting from mining, mineral processing and smelting. In the second section proterozoic crustal evolution of the mineralized terranes in the state of Rajasthan, northwest India, hosting three major sulphide deposits, along with their resource base latest geochronological constraints, geological setting and recent concepts on genesis are discussed. The book is profusely illustrated with both black and white and colour photographs.

This book provides essential knowledge for creating treatment plans for adult dental patients. Treatment planning strategies are presented to help with balancing the ideal with the practical, with emphasis placed on the central role of the patient — whose needs should drive the treatment planning process. The focus is on planning of treatment, not on the comprehensive details of every treatment modality in dentistry. CD-ROM bound into book presents five cases of varying difficulty with interactive exercises that allow users to plan treatment. What's the Evidence? boxes link clinical decision-making and treatment planning strategies to current research. In Clinical Practice boxes highlight specific clinical situations faced by the general dentist. Review Questions and Suggested Projects, located at the end of each chapter, summarize and reinforce important concepts presented in the book. Key Terms and Glossary highlights the terms

that are most important to the reader. Suggested Readings lists included at the end of most chapters provide supplemental resources. Chapter on Treatment Planning for Smokers and Patients with Oral Cancer addresses the dentist's role in managing patients with oral cancer, recognizing oral cancer and differential diagnosis of oral lesions, planning treatment for patients undergoing cancer therapy, and smoking cessation strategies. Chapter on Treatment Planning for the Special Care/Special Needs Patient examines the role of the general dentist in the management of patients with a variety of conditions including physical handicaps, mental handicaps, head trauma, hemophilia, and patients' needs before, during, or after major surgery. Chapter on Treatment Planning for the Alcohol and Substance Abuser discusses the challenges of treating this patient population, as well as how to recognize the problem, delivery of care, scope of treatment, and behavioral/compliance issues. Expanded content on Ethical and Legal Issues in Treatment Planning reflects new accreditation guidelines. Dental Team Focus boxes highlight the relevance of chapter content to the dental team. Ethics Topics boxes emphasize the ethical topics found within each chapter. International Tooth Numbering is listed alongside the U.S. tooth numbers in examples and illustrations.

Oral healthcare is an integral part of overall health and well-being, and it is a significant and increasing challenge as people grow frail. Incidence of caries and gingivitis among residents of long-term care facilities are on the rise, and daily oral hygiene is often difficult for patients who are frail or in need of assistance. Oral Healthcare and the Frail Elder: A Clinical Perspective provides dentists, dental hygienists, and other healthcare professionals with comprehensive, practical instruction on managing the multifaceted oral healthcare needs of frail elders. By discussing background information and relevant literature, the book provides a holistic approach to clinical issues such as oral pain, dry mouth, and periodontal disease. Edited by experts in the field, Oral Healthcare and the Frail Elder enhances clinical application with thorough reviews of pertinent social and ethical issues, access to care issues, and the practicalities for overcoming these in order to provide high-quality oral healthcare to an aging population.

Designated a Doody's Core Title! "As a gerontological clinical educator/research nurse, I will often use this as a reference. The format and the content are good, and the explanations of how to best use the evidence simplify the process of sifting through mountains of information to figure the best practice." Score: 97, 5 stars --Doody's "This third edition holds the promise of bringing yet another level of depth and sophistication to understanding the best practices for assessment, interventions, and anticipated outcomes in our care of older adults. Evidence-Based Geriatric Nursing Protocols for Best Practice is intended to bring the most current, evidence-based protocols known to experts in geriatric nursing to the audience of students, both graduate and undergraduate, practitioners at the staff level from novice to expert, clinicians in specialty roles (educators, care managers, and advanced practice nurses), and nursing leaders of all levels. We

owe a debt of gratitude to the many authors and the editors for bringing this work to us."--from the preface by Susan Bowar-Ferres, PhD, RN, CNAA-BC, Senior Vice President & Chief Nursing Officer, New York University Hospitals Center

"The greatest beneficiaries of these new practice protocols, however, will be the older adults and their family members who stand to benefit from the greater consistency in care and improved outcomes from care based on the best evidence that is tempered with the expertise of advanced clinician-scholars."--from the foreword by Eleanor S. McConnell, RN, PhD, APRN, BC, Associate Professor and Director, Gerontological Nursing Specialty; Clinical Nurse Specialist, Durham Veterans Administration Medical Center; Geriatric Research, Education and Clinical Center

This is the third, thoroughly revised and updated edition of the book formerly entitled *Geriatric Nursing Protocols for Best Practice*. The protocols address key clinical conditions and circumstances likely to be encountered by a hospital nurse caring for older adults. They represent "best practices" for acute care of the elderly as developed by nursing experts around the country as part of the Hartford Foundation's Nurses Improving Care to the Hospitalized Elderly project (NICHE). This third edition includes 17 revised and updated chapters and more than 15 new topics including critical care, diabetes, hydration, oral health care, palliative care, and substance abuse. Each chapter includes educational objectives, assessment of the problem, nursing intervention or care strategies, and references; most chapters have case studies. Support the very best health, well-being, and quality of life for older adults!

Here's the ideal resource for rehabilitation professionals who are working with or preparing to work with older adults! You'll find descriptions of the normal aging process, discussions of how health and social factors can impede your clients' ability to participate in regular activities, and step-by-step guidance on how to develop strategies for maximizing their well-being.

This landmark text is the key resource for nurses working in the field of palliative care. Edited by renowned nursing experts, and written by a dynamic team of internationally known authorities in nursing and palliative medicine, the *Oxford Textbook of Palliative Nursing* covers the gamut of principles of care from the time of initial diagnosis of a terminal disease to the end of a patient's life and beyond. The text is distinctively developed to highlight the nurse's vital role as part of an integrated palliative care team. Various care settings are discussed including the hospital, ICU, home care, and hospice. Chapters focus on the practical aspects of nursing care, including symptom assessment, patient teaching, family support, psychosocial aspects of palliation, and spiritual care. New to the fourth edition are chapters on the National Consensus Project for Quality Palliative Care Guidelines, palliative care of veterans, palliative care in rural settings, disaster situations, palliative care in Eastern Europe, and palliative care in the Philippines.

A clinical guide for all health specialists needing practical, relevant and comprehensive information on managing the elderly patient.

Authoritative, comprehensive, holistic, and highly illustrated, *The Caregiver's Encyclopedia* will help you figure out how to be the best caregiver you can be. Popular with generations of practitioners, *Brocklehurst's Textbook of Geriatric Medicine and Gerontology* has been the definitive reference of choice in the field of geriatric care. The new 7th Edition, by Howard M. Fillit, MD, Kenneth Rockwood, MD, and Kenneth Woodhouse, carries on this tradition with an increased clinical focus and updated coverage to help you meet the unique challenges posed by this growing patient population. Consistent discussions of clinical manifestations, diagnosis, prevention, treatment, and more make reference quick and easy, while over 255 illustrations compliment the text to help you find what you need on a given condition. Examples of the latest imaging studies depict the effects of aging on the brain, and new algorithms further streamline decision making. Emphasizes the clinical relevance of the latest scientific findings to help you easily apply the material to everyday practice. Features consistent discussions of clinical manifestations, diagnosis, prevention, treatment, and more that make reference quick and easy. Includes over 255 illustrations—including algorithms, photographs, and tables—that compliment the text to help you find what you need on a given condition. Provides summary boxes at the end of each chapter that highlight important points. Features the work of an expert author team, now led by Dr. Howard M. Fillit who provides an American perspective to complement the book's traditional wealth of British expertise. Includes an expanded use of algorithms to streamline decision making. Presents more color images in the section on aging skin, offering a real-life perspective of conditions for enhanced diagnostic accuracy. Includes examples of the latest imaging studies to help you detect and classify changes to the brain during aging. Offers Grade A evidence-based references keyed to the relevant text.

The proportion of the population over 65 years of age is increasing steadily in most industrialized countries. In the United States the proportion of elderly people has risen from four percent in 1900 to 11 % in 1978, and is projected to be 14% by the year 2000. The occurrence of debilitating chronic diseases in the elderly increases with each additional year. These diseases, along with the natural loss of tissue function that occurs throughout adult life, impose a heavy burden on the health care system. Nutrition plays an important etiologic role in many of these degenerative changes. Consequently, the aging segment of the population presents a challenge to the nutrition scientist, who should be able to recommend optimal intakes of nutrients to minimize the functional losses associated with aging and to optimize the health of those already elderly. This sixth volume in the series *Human Nutrition: A Comprehensive Treatise* provides a conspectus of the various interactions of nutrition with the aging process and a comprehensive survey of current knowledge of the amounts of individual nutrients needed by the elderly. The volume begins with a general survey of the multifaceted relationship of nutrition to aging, followed by four chapters on how nutrition can affect age-related changes in selected body functions. The next six chapters cover the available evidence regarding the needs of the elderly for dietary energy, protein, calcium, trace elements, vitamins, and fiber.

New edition presenting latest advances in oral medicine. Includes multiple choice questions for revision and a free book called *Basic Oral Radiology* (9789351523215). Previous edition published in 2008.

Print+CourseSmart

Emerging innovations in the medical sector have created new opportunities for improved patient care and disease control. By optimizing current practices and procedures, improvements in healthcare delivery and quality can be achieved. *Oral Healthcare and Technologies: Breakthroughs in Research and Practice* is a comprehensive resource with the latest scholarly perspectives on the technological advancements and real-world applications for oral hygiene and medical care. Featuring extensive coverage across a range of relevant perspectives and topics, such as disease management, healthcare administration, and medical informatics, this multi-volume book is ideally designed for professionals, researchers, students, and practitioners seeking academic material on developments and innovations in oral medicine.

Aging, Place, and Health: A Global Perspective examines the interplay of biological, social, and environmental factors affecting the health and well-being of aging individuals, their families, and communities. With a strong interdisciplinary focus, this book provides a clear, coherent structure to address the diversity of topics in this increasingly vital field. The second edition maintains the ecological approach using the same framework as in the first edition. The ecological model serves as a template for the organization of the book. The new edition provides a more global focus and introduces new topics such as the impact of technology. This edition also introduces a new co-editor as well as specific chapters prepared by leading experts in the field.
