Construction Safety Planning David V. MacCollum

Construction Safety Planning is a comprehensive, practical, step-by-step guide for those who design and oversee large and small projects. Designed to facilitate compliance with new OSHA objectives, it presents, for those who are responsible for construction safety, what questions to ask in order to avoid conditions that invite injury or death on site. The book shows how to integrate safety planning into existing design and construction scheduling in order to avoid duplicating paperwork that is normally associated with safety planning. Advice is given on how to involve all supervisory personnel as hazard hunters, so that timely prevention measures can be taken. Author David V. MacCollum is a forty-five-year veteran safety engineer who participated in the development of safety planning concepts used by the U.S. Army Corps of Engineers on big dam projects in the Pacific Northwest during the 1950s. In this clearly written reference he highlights the concepts and practices that reduced construction deaths by 75 percent and are today still enabling the Corps of Engineers to enjoy the same reduction nationwide, when compared to similar work not
