Export-oriented industrialization has transformed the Korean economy so profoundly that it has become known as the "Miracle on the Han." Yet, this industrial model has become fragile, as Korea's chaebols are being challenged by Chinese competitors. Attempts to seek out new engines of economic growth have failed, or remain underdeveloped, while a looming demographic crisis threatens to exacerbate Korea's problems. This book outlines a blueprint for overcoming these challenges, moving beyond the business strategies, government policies, and socio-cultural patterns established under export-oriented industrialization. Written by a stellar line-up of international contributors, its central proposition is that social change is needed to support the strategic and operational transformation of the chaebol and SMEs. Specifically, it stresses the need for an appreciation of the gender, national, and ethnic diversity emerging within the Korean workplace today. If properly leveraged, such diversity has the potential to reduce the groupthink that hampers the creativity and responsiveness of Korean firms today, as well as facilitating greater success in overseas markets. Taking an interdisciplinary approach, this book will be useful to students and scholars in Korean Studies, as well as those studying business, economics, and sociology more broadly in East Asia.

This book is one of the very few published investigations of international business in a Japanese context, based on an up-to-date overview of the Japanese mergers and acquisitions (M&A) market in particular. The author explicates recent developments in Japanese business and shows how Japanese firms drastically change to reach out to become

more globalized. The book can serve as a foundation in a teaching module for any Japan-related class in international business. Specifically, this publication reveals the inner workings of the Japanese business system. M&A activities covered here include those of foreign firms in Japan as well as Japanese firms investing domestically and in cross-border ventures. Illustrated by carefully chosen examples and supported by extensive data analyses, this book is highly recommended to readers who seek an in-depth understanding of the Japanese M&A market. The volume is enriched by case studies that explicitly illustrate the objectives of specific firms and how they successfully manage their M&A. The author brings to this work his 14 years of experience in Japan and has relied not only on English literature but also on original Japanese sources in creating this highly valuable contribution to the field.

China has been holding its annual China International Import Expo (CIIE), starting from 2018 in Shanghai. This is a significant move for China to actively open the Chinese market to the rest of the world as this supports trade liberalization and economic globalization This book systematically expounds the background and content of CIIE, and studies the opportunities that China's expansion of imports brings to its economy, enterprises, consumers and to that of other countries. It elaborates on how the CIIE facilitates countries and regions from different parts of the world to strengthen their economic cooperation and trade, and promote global trade and world economic growth. The book helps readers understand China's

reform and opening-up, as well as the latest trends and policies of the country's expansion of import. Log Home Living is the oldest, largest and most widely distributed and read publication reaching log home enthusiasts. For 21 years Log Home Living has presented the log home lifestyle through striking editorial, photographic features and informative resources. Discover the joy of cooking for yourself with more than 160 perfectly portioned, easy-to-execute recipes, flexible ingredient lists to accommodate your pantry, and ideas for improvising to your taste. Taking care to prepare a meal for yourself is a different experience than cooking for others. It can be a fun, casual, and (of course) delicious affair, but there are challenges, from avoiding a fridge full of half-used ingredients to ending up with leftovers that become boring after the third reheat. Cooking for One helps you make cooking for yourself special without becoming a chore with unfussy yet utterly appealing meals that rely on ingredients you already have on hand, like Garam Masala Pork Chop with Couscous and Spinach and Weeknight Chicken Cacciatore. Don't have exactly the right ingredients? Never fear--with a "Kitchen Improv" box on every page, we offer ideas for altering the dish so it works for you. And for those weeks you didn't make it to the supermarket, we use a "Pantry Recipe" icon to clearly

mark recipes that rely entirely on our checklist for a well-stocked pantry. We show you when it's worth making two servings (but never more) with our "Makes Leftovers" icon, and suggest how to transform those leftovers into a whole new meal. (We love our Spice-Rubbed Flank Steak with Celery Root and Lime Yogurt Sauce served over arugula as a hearty salad the next day.) Ingredients themselves often lead you to another exciting meal--when you're left with half an eggplant from Simple Ratatouille, we direct you to Broiled Eggplant with Honey-Lemon Vinaigrette as the perfect way to use it up. And if the thought of a sink full of dishes keeps you out of the kitchen, there are plenty of appealing one-pan dinners like Sheet Pan Sausages with Sweet Potatoes, Broccoli Rabe, and Mustard-Chive Butter or Couscous with Shrimp, Cilantro, and Garlic Chips that are here to save the day.

This manual describes the Icing Research Tunnel (IRT) at the NASA Lewis Research Center and provides information for users who wish to conduct experiments in this facility. The capabilities of the tunnel test section, main drive system, speed control system, and spray bars are described. Tunnel performance maps of liquid water content as a function of median volume droplet size is presented for two types of spray nozzles at test-section velocities ranging from 86.8 to 303.9 kn (100 to 350 mph). The facility support systems, which include heated air systems, steam and service air systems, an altitude exhaust system, a force balance system, and the model electrical power system, are described. Also discussed are facility instrumentation capabilities for temperature

and pressure measurements and model attitude simulation. In addition, photographic documentation and flow visualization techniques are explained, and pretest meeting formats and schedules are outlined. Tunnel-user responsibilities, personnel safety requirements, and types of test agreements are explained. The IRT is a closed-return atmospheric tunnel with a test section that is 6 ft high, 9 ft wide, and 20 ft long. It is equipped to support testing at airspeeds up to 303.9 kn (350 mph) with a 5.0-percent blockage model in the test section in a temperature and water-droplet environment that simulates natural icing conditions.

The A Guide to the Home Electric System provides readers with a complete handbook to the home electric system. In the rapid growth of the Chinese economy as the

"world's factory and market", while this process has been supported by foreign companies, local Chinese companies have also emerged in the brief span of about 10 years to become major players. This is an extremely rare case in the world history and recently even among the BRICs and the NIEs. One cannot help but wonder what strategic positions foreign firms have adopted to cope with the extraordinary, fierce challenges they have had to face from local Chinese firms. A workshop discussed and illuminated the corporate activities and competitive and cooperative strategies of both Chinese and foreign firms from the perspective of Japanese, European, US and Asian firms.

This book honors Professor. John O'M. Bockris, presenting authoritative reviews on some of the subjects to which he made significant contributions – i.e., electrocatalysis, fuel cells, electrochemical theory, electrochemistry of single crystals, in situ techniques, rechargeable batteries, passivity, and solar-fuels – and revealing the roles of electrochemical science and technology in achieving a sustainable society.

Electrochemistry has long been an object of study and is now growing in importance, not only because of its fundamental scientific interest but also because of the central role it is expected to play in a future sustainable society. Professor John O'M. Bockris contributed greatly to various aspects of fundamental and applied electrochemistry – such as the structure of the double layer, kinetics and mechanism of the electrochemistry of hydrogen and oxygen, electrocatalysis, adsorption and electrochemical oxidation of small organic molecules, fuel cells, electrocrystallization, theoretical electrochemistry, new methods, photoelectrochemistry, bioelectrochemistry, corrosion and passivity, hydrogen in metals, ionic solutions and ionic liquids, and molten silicates and glasses, as well as socio-economic issues such as the hydrogen economy – for over half a century from 1945 until his retirement in 1997.

Advances in Renewable Energies and Power Technologies: Volume 1: Solar and Wind Energies examines both the theoretical and practical elements of renewable energy sources, such as photovoltaics, solar, photothermal and wind energies.
