enzyme [en'z?m] any protein that acts as a catalyst, increasing the rate at which a chemical reaction occurs. The human body probably contains about 10,000 different enzymes. At body temperature, very few biochemical reactions proceed at a significant rate without the presence of an enzyme. Like all catalysts, an enzyme does not control the direction

The trade routes he created became lucrative pathways for commerce, but also for ideas, technologies, and expertise that transformed the way people lived. The Mongols also introduced the first

Structure, properties, spectra, suppliers and links for: Isopropanol, Isopropyl alcohol, 67-63-0.

Merit badge requirements.
