Indians are not symbols of a romantic past but living peoples, whose histories evolve throughout the past and in the present. The history of American Indian tribes in Colorado is the unfolding of lives from 12,000 B.P. through the present. Colorado has been the scene of many and varied Indian civilizations, from the earliest nomads who came by foot and hunted the giant woolly mammoth to the Utes, Shoshones, Cheyenne and Arapaho who evolved an exhilarating warrior culture based on the horse and the buffalo. Lavishly illustrated with maps, drawings, and historic photographs, *People of the Red Earth* is the most complete historical guide to Colorado's Indians and a comprehensive guidebook to archeological sites, museums, cultural centers, and other sources of information.

The Kingfisher Young People's Book of Planet Earth is an exciting and colorful guide to our planet. No stone is left unturned in this fascinating survey of the elements that comprise the Earth, from its origins in space as a swirling cloud of gas and dust, to the dynamic, living planet we know today. Adults and children alike will be thrilled by the dramatic visuals, and the quality of information presented in each fact-packed, full-color spread. Children will discover detailed answers to their questions, whether it's how the world was formed, why dinosaurs became extinct, or why weather changes from one day to the next. Sections on conservation and the environment provide a complete picture of the interaction of life-forms on Earth, and detail the ways human beings can attempt to preserve a habitat for all creatures. Also includes a factfile, and glossary. One Earth profiles Black, Indigenous and People of Color who live and work as environmental defenders. Through their individual stories, the book shows that the intersection of environment and ethnicity is an asset to achieving environmental goals.

The twenty short biographies introduce readers to diverse activists from all around the world, who are of all ages and ethnicities. From saving ancient trees on the West Coast of Canada, to protecting the Irrawaddy dolphins of India, to uncovering racial inequalities in the food system in the United States, these environmental heroes are celebrated by author and biologist Anuradha Rao, who outlines how they went from being kids who cared about the environment to community leaders in their field. One Earth is full of environmental role models waiting to be found.

The planet as seen by its inhabitants In two millenia, our knowledge of the planet and its natural laws and forces has undergone remarkable changes--from the religious belief of earth as the center of the universe to the modern astronomers' view that it is a mere speck in the cosmos. Now a first-of-its-kind reference work charts this remarkable intellectual progression in our evolving perception of the earth by surveying the history of geology, geography, geophysics, oceanography, meteorology, space science, and many other fields. Covers human understanding of the Earth in various times and cultures The Encyclopedia traces our understanding of the earth and its functioning throughout history, summarizing historical explanations of earthly occurrences, including explanations with no scientific basis. It presents the latest facts and theories, explains how our understanding of the earth has evolved, and shows why many outrageous and fanciful earlier ideas were accepted in their time. The coverage explores the physical phenomena that inform our knowledge, starting at the earth's core and extending outward through the mantle, crust, oceans, and atmosphere to the magnetosphere and beyond. Charts the evolution of our perceptions The primary focus of the Encyclopedia is the history of the study of the earth. It also discusses the institutions that advanced and shaped science and probes the interplay between science, practical applications, and social and political forces. The result is a unified historical overview of the earth across a wide canvas of time and place, from antiquity to the space age. Its wide-ranging articles summarize subjects as diverse as geography and imperialism, environmentalism, computers and meteorology, ozone formation theories since 1800, scientific rocketry, the Scopes trial, and much more. Special Features Shows how diverse disciplines, from geology to space science, fit together in a coherent view of the earth * Explains earlier ideas and theories in the context of the beliefs and scientific knowledge of their time * Spotlights important institutions that have shaped the history of science * Explores relationships between science, practical applications, and sociopolitical concerns * Provides a subject index and an index of scientists with birth/death dates

Long ago the people of Dahomey told a tale of the days when the world was new, and the only Earth people were animals. They lived in cold and darkness because Mawu, the selfish Moon god, kept all the fire to herself. At last, little Chameleon and slow Tortoise, working together, found a way to outwit Mawu.

Only 35,000 humans remain... ..and the aliens hunt them for sport. Who will lead the uprising? In the year A.D. 3000, Earth is a dystopian wasteland. The great cities stand crumbling as a brutal reminder of what we once were. When the Psychlos invaded, all the world's armies mustered little resistance against the advanced alien weapons. Now, the man animals serve one purpose. Do the Psychlos' bidding or face extinction. One man, Jonnie Goodboy Tyler, has a plan. They must learn about the Psychlos and their weapons. He needs the other humans to follow him. And that may not be enough. Can he outwit his Psychlo captor, Terl? What is their weakness? The fate of the Galaxy lies on the Battlefield of Earth. This is one of the finest examples of science fiction ever written, with nuance, sub-plots, and action all the way through. A masterpiece at over 1,000 pages. Featuring Amelia Telford, Andrew Turton and Pete Ceglinski, Bittu Sahgal, Chewang Norphel, David Attenborough, Doug Smith, Ellen MacArthur, Greta Thunberg, Isabel Soares, Isatou Ceesay, Marina Silva, Melati and Isabel Wijsen, Mohammed Rezwan, Renée King-Sonnen, Rok Rozman, Sheila Watt-Cloutier, Stella McCartney, William Kamkwamba, Yin Yuzhen and Yvon Chouinard. Featuring illustrations by Jackie Lay.

In the creation of Earth's Elders, Jerry Friedman met, interviewed and photographed some of the world's oldest elders – 110 years old or older (supercentenarians, as researchers call them). Jerry Friedman, photographer, author and founder of Earth's Elders, spent four years on a landmark project to introduce the world to the sixty oldest people on earth. Using his lens to capture a community that has never before been

documented, the award-winning photographer has shed new light on the "invisible" world of people 110 years and older. With each visit on his globetrotting journey to capture the lives of these "super centenarians," Friedman gained a deeper understanding of what the elderly in every culture have to offer. Inspired by the opportunity to improve the quality of life of the elderly, to teach children to recognize the wisdom and value of the elderly as essential parts of our society, and to improve the health of our communities through intergenerational tolerance and communication, Friedman created Earth's Elders.

"Follett risks all and comes out a clear winner," extolled *Publishers Weekly* on the release of *The Pillars of the Earth*. A departure for the bestselling thriller writer, the historical epic stunned readers and critics alike with its ambitious scope and gripping humanity. Today, it stands as a testament to Follett's unassailable command of the written word and to his universal appeal. *The Pillars of the Earth* tells the story of Philip, prior of Kingsbridge, a devout and resourceful monk driven to build the greatest Gothic cathedral the world has known . . . of Tom, the mason who becomes his architect—a man divided in his soul . . . of the beautiful, elusive Lady Aliena, haunted by a secret shame . . . and of a struggle between good and evil that will turn church against state and brother against brother. A spellbinding epic tale of ambition, anarchy, and absolute power set against the sprawling medieval canvas of twelfth-century England, this is Ken Follett's historical masterpiece.

Human activity has irreversibly changed the natural environment. But the news isn't all bad. It's accepted wisdom today that human beings have permanently damaged the natural world, causing extinction, deforestation, pollution, and of course climate change. But in *Inheritors of the Earth*, biologist Chris Thomas shows that this obscures a more hopeful truth -- we're also helping nature grow and change. Human cities and mass agriculture have created new places for enterprising animals and plants to live, and our activities have stimulated evolutionary change in virtually every population of living

species. Most remarkably, Thomas shows, humans may well have raised the rate at which new species are formed to the highest level in the history of our planet. Drawing on the success stories of diverse species, from the ochre-colored comma butterfly to the New Zealand pukeko, Thomas overturns the accepted story of declining biodiversity on Earth. In so doing, he questions why we resist new forms of life, and why we see ourselves as unnatural. Ultimately, he suggests that if life on Earth can recover from the asteroid that killed off the dinosaurs, it can survive the onslaughts of the technological age. This eye-opening book is a profound reexamination of the relationship between humanity and the natural world.

"Presents the genre from a holistic perspective, arguing that this subgenre of fantasy literature is misunderstood as result of decades of incomplete and reductionist literary studies. Asserts mythopoeic fantasy is the most complete literary expression of a worldview based on the existence of supernatural powers and could transform social consciousness with renewed emphasis on anticipating the future"--Provided by publisher.

The first Black winner of the Nobel Prize in Literature gives us a tour de force, his first novel in nearly half a century: a savagely satiric, gleefully irreverent, rollicking fictional meditation on how power and greed can corrupt the soul of a nation. In an imaginary Nigeria, a cunning entrepreneur is selling body parts stolen from Dr. Menka's hospital for use in ritualistic practices. Dr. Menka shares the grisly news with his oldest college friend, bon viveur, star engineer, and Yoruba royal, Duyole Pitan-Payne. The life of every party, Duyole is about to assume a prestigious post at the United Nations in New York, but it now seems that someone is determined that he not make it there. And neither Dr. Menka nor Duyole knows why, or how close the enemy is, or how powerful. Chronicles from the Land of the Happiest People on Earth is at once a literary hoot, a crafty whodunit, and a scathing indictment of political and social corruption. It is a stirring call to arms against the abuse of power from one of our fiercest political activists, who also happens to be a global literary giant.

The Pagan tradition celebrates the physical nature of life on earth, blending science with spiritual folklore. Seasonal festivals are combined with the rediscovery of shamanic techniques and an emphasis on grounded empiricism. Considering the everyday world of food, health, sex, work, and leisure to be sacred, Pagans oppose that which threatens life such as deforestation, overdevelopment, nuclear power and invoke ancient deities in this struggle for the well-being of the earth and its inhabitants. Contemporary Paganism presents a broad-based introduction to the main trends of contemporary Paganism, revealing the origins and practical aspects of Druidry, Witchcraft, Heathenism, Goddess Spirituality and Magic, Shamanism, and Geomancy among others. Making use of both traditional history and the movement's more imaginative sources, Harvey reveals how Paganism and its central focus on individual and social life is evolving and how this new religion perceives and relates to more traditional ones.

A People's Curriculum for the Earth is a collection of articles, role plays, simulations, stories, poems, and graphics to help breathe life into teaching about the environmental crisis. The book features some of the best articles from Rethinking Schools magazine alongside classroom-friendly readings on climate change, energy, water, food, and pollution—as well as on people who are working to make things better. A People's Curriculum for the Earth has the breadth and depth of Rethinking Globalization: Teaching for Justice in an Unjust World, one of the most popular books we've published. At a time when it's becoming increasingly obvious that life on Earth is at risk, here is a resource that helps students see what's wrong and imagine solutions. Praise for A People's Curriculum for the Earth "To really confront the climate crisis, we need to think differently, build differently, and teach differently. A People's Curriculum for the Earth is an educator's toolkit for our times." — Naomi Klein, author of The Shock Doctrine and This Changes Everything: Capitalism vs. the Climate "This volume is a marvelous example of justice in ALL facets of our lives—civil, social, educational, economic, and yes, environmental. Bravo to the Rethinking Schools team for pulling this collection together and making us think more holistically about what we mean when we talk about justice." — Gloria Ladson-Billings, Kellner Family Chair in Urban Education, University of Wisconsin-Madison "Bigelow and Swinehart have created a critical resource for today's young people about humanity's responsibility for the Earth. This book can engender the shift in perspective so needed at this point on the clock of the universe." — Gregory Smith, Professor of Education, Lewis & Clark College, co-author with David Sobel of Place- and Community-based Education in Schools

God is calling us to live differently. The challenges we face are imminent. GreenFaith provides vision, inspiration, and practical tools to help you build your faith while inhabiting a creation that is at risk. With honesty and candor, Fletcher Harper shows that it takes belief and practice, science and faith to sustain us and our planet. The book gives concrete examples and tips that will help people of faith and worshiping communities engage in Earth care—in bold, life-giving ways. Each chapter has questions to guide personal study and group conversation. All bets are off if we go over the climate change cliff—a disaster greater than many Hurricane Sandys. There is no doubt that climate change is happening. While debated for years and despite some media reports to the contrary, the majority of people are ready to take action to avoid calamity. But what action is advisable or even possible? What can ordinary people do in the face of such staggering problems? Can or should faith communities play a part? Fletcher Harper shows how we can make a difference and make Earth a better world for all of us.

nightmare world of grotesque and terrifying animal-plant life. Gigantic beetles, spiders, bugs and ants filled the putrid, musty earth - ready to kill and devour anything in sight. There were men amidst this horror - men who cringed and ran from the ravening monsters and huddled in the mushroom forests at night. Burl was one of these creatures. But one day inspiration hit Burl. He would find a weapon - he would fight back. And with this idea the first step was taken in man's most desperate flight for freedom in this most horrible of all worlds. But it was only a first step.

New York Times and USA Today bestselling authors and award-winning archaeologists W. Michael Gear and Kathleen O'Neal Gear bring the stories of these first North Americans to life in this and other volumes in the magnificent North America's Forgotten Past series. Set five thousand years ago and ranging through what is now Montana, Wyoming, northern Colorado, and Utah, *People of the Earth* follows the migration of the Uto-Aztecan people south out of Canada. It is the unforgettable tale of a woman torn between two peoples and two dreams, of the two men who love her and the third who must have her, and of the vision given to the peoples long ago by the spirit of the wolf. This popular introductory textbook provides an overview of more than 3 million years of human prehistory. Written in an accessible and jargon-free style, this engaging volume tells the story of humanity from our beginnings in tropical Africa up to the advent of the world's first urban civilizations. A truly global account, *World Prehistory* surveys the latest advances in the study of human origins and describes the great diaspora of modern humans in the millennia which followed as they settled Europe, Asia and the Americas. Later chapters consider seminal milestones in prehistory: the origins of food production, the colonization of the offshore Pacific and the development of the first more complex human societies based, for the most part, on agriculture and stock raising. Finally, Fagan and Durrani examine the prevailing theories regarding early state-organized societies and the often flamboyant, usually volatile, pre-industrial civilizations which developed in the Old World and the Americas. Fully updated to reflect new research, controversies, and theoretical debates, this unique book continues to be an ideal resource for the beginner first approaching archaeology. Drawing on the experience of two established writers in the field, *World Prehistory* is a respected classic which acquaints students with the fascinations of human prehistory.

Between the years 2030 and 2050, a quarter of a million people per year will lose their lives to climate change. Blazing temperatures and catastrophic weather are well-known climate change effects, but these simply do not compare with health-related effects: the transmission of water-borne and vector-borne disease. Arjun Marwaha, a high schooler with a passion for STEM, has committed himself to foster awareness for climate change among the youth of today. In *Our Changing Earth*, he delves into how our planet will be altered in response to climate change, and why this is relevant particularly to young people. Looking forward, Arjun hopes to promote awareness among all humans for the greatest threat to humanity in the 21st century and beyond: climate change.

A man chases after a mysterious metal object that may not even exist — and his journey leads him on to ever-greater levels of madness, dissociation, and metaphysical conundrums. After ten years in a Zen monastery, Proteus knows it's time to leave. A troubled, solitary man, he knows what he seeks is not to be found sitting in meditation. His problem is that, during his time at the monastery, he's discovered something strange inside his mind: the ability to connect with a mysterious, silent, metallic spherical object he calls Mosquito. His connection to this possibly extraterrestrial object, which seems to dwell on an existential plane of its own, gives Proteus a flimsy sense of purpose. So when Mosquito abruptly disappears one day, Proteus can't bear the loss, and he sets off in pursuit of answers. Thus starts a surreal, philosophically maddening quest for meaning. Chasing the elusive Mosquito leads Proteus to in-between worlds where things do not quite hold together, and where the living and the dead must learn to live in and out of the boundaries of time. The further he gets from sanity, the closer he comes to something that may turn out to be wisdom. Playful but unapologetically challenging, *New People of the Flat Earth* is a breathtakingly original novel that defies categorisation or summary.

Explores the basics of man's interaction with Earth

You've heard it before: A healthful diet rich in plant-based foods can prolong your life. But how much could you really extend your time? The Adventist enclave in Loma Linda, California, is America's only "Blue Zone" one of five regions on Earth where people live measurably longer—about 10 years more— than average, as identified by National Geographic-funded research. This Blue Zone status is thanks largely to the foods Loma Linda residents and Adventists choose eat—and the foods they choose not to eat. Loma Linda was established in 1905 by the Adventist founder and prophet Ellen G. White. Her great-great-grandson, John Howard Weeks, still lives there. He knows firsthand what it's like to fall into the rut of unhealthy habits—and to relearn how to live and eat in a healthy way. Through the teachings of his family, Weeks was able to conquer his temptations and embrace a healthy way of living. He'll show you how to do the same, no matter what your personal battle looks like. In *The Healthiest People on Earth*, Weeks shares the secrets of how anyone, anywhere, can create a "Blue Zone" of their own and live a longer, healthier life. A lively read full of exclusive family stories, gainful tips and tricks, happy home remedies, and plant-based recipes, this book will be your first step on the journey to a longer, healthier, more fulfilling life. This is not a book about religion—it is about health and happiness. It is possible to be healthy in body, mind, and spirit. Start by eating like the healthiest people on Earth.

A companion title to *Earth from Above* for Young Readers looks at the long-term consequences of human interference in the natural world and the personal stories of people around the world "going green" to do what they can to help the planet.
