The book entitled "The internationalization of e-commerce: a case study of the Alibaba group" has been written by the Brazilian researchers Matheus Felipe Pereira de Souza and Elói Martins Senhoras. It is the 31st didactic book of the "Communication & Public Policies Collection" which aims to stimulate the development of textbooks fulfilling bibliographical gaps. This book brings into light 3 main discussions: International Business as a scientific field of study the internationalization process of e-commerce and, a case study of the Alibaba Group.

Edible insects have always been a part of human diets, but in some societies there remains a degree of disdain and disgust for their consumption. Insects offer a significant opportunity to merge traditional knowledge and modern science to improve human food security worldwide. This publication describes the contribution of insects to food security and examines future prospects for raising insects at a commercial scale to improve food and feed production, diversify diets, and support livelihoods in both developing and developed countries. Edible insects are a promising alternative to the conventional production of meat, either for direct human consumption or for indirect use as feedstock. This publication will boost awareness of the many valuable roles that insects play in sustaining nature and human life, and it will stimulate debate on the expansion of the use of insects as food and feed.

This new edition of the definitive work on doing paleoethnobotany brings the book up to date by incorporating new methods and examples of research, while preserving the overall organization and approach of the book to facilitate its use as a textbook. In addition to updates on the comprehensive discussions of macroremains, pollen, and phytoliths, this edition includes a chapter on starch analysis, the newest tool in the paleoethnobotanist's research kit. Other highlights include updated case studies; expanded discussions of deposition and preservation of archaeobotanical remains; updated historical overviews; new and updated techniques and approaches, including insights from experimental and ethnoarchaeological studies; and a current listing of electronic resources. Extensively illustrated, this will be the standard work on paleoethnobotany for a generation.

This open access book explores supply chains strategies to help companies face challenges such as societal emergency, digitalization, climate changes and scarcity of resources. The book identifies industrial scenarios for the next decade based on the analysis of trends at social, economic, environmental technological and political level, and examines how they may impact on supply chain processes and how to design next generation supply chains to answer these challenges. By mapping enabling technologies for supply chain innovation, the book proposes a roadmap for the full implementation of the supply chain strategies based on the integration of production and logistics processes. Case

studies from process industry, discrete manufacturing, distribution and logistics, as well as ICT providers are provided, and policy recommendations are put forward to support companies in this transformative process.

Immigration in Psychoanalysis: Locating Ourselves presents a unique approach to understanding the varied and multi-layered experience of immigration, exploring how social, cultural, political, and historical contexts shape the psychological experience of immigration, and with it the encounter between foreign-born patients and their psychotherapists. Beltsiou brings together a diverse group of contributors, including Ghislaine Boulanger, Eva Hoffman and Dori Laub, to discuss their own identity as immigrants and how it informs their work. They explore the complexity and the contradictions of the immigration process - the tension between loss and hope, future and past, the idealization and denigration of the other/stranger, and what it takes to tolerate the existential dialectic between separateness and belonging. Through personal accounts full of wisdom and nuance, the stories of immigration come to life and become accessible to the reader. Intended for clinicians, students, and academics interested in contemporary psychoanalytic perspectives on the topic of immigration, this book serves as a resource for clinical practice and can be read in courses on psychoanalysis, cultural psychology, immigrant studies, race and ethnic relations, self and identity, culture and human development, and immigrants and mental health.

We need a bold new brand of teacher leadership that will create opportunities for teachers to practice, share, and grow their knowledge and expertise. This book is about "teacherpreneurs"—highly accomplished classroom teachers who blur the lines of distinction between those who teach in schools and those who lead them. These teacherpreneurs embody the concept that teachers can teach as well as lead the transformation of teaching and learning. It's about empowering expert teachers who can buoy the image of teaching and enforce standards among their ranks while all along making sure that their colleagues as well as education policymakers and the public know what works best for students. The book follows a small group of teacherpreneurs in their first year. We join their journey toward becoming teacher leaders whose work is not defined by administrative fiat, but by their knowledge of students and drive to influence policies that allow them and their colleagues to teach more effectively. The authors trace the teacherpreneurs' steps—and their own—in the effort to determine what it means to define and execute the concept of "teacherpreneurism" in the face of tough demands and resistant organizational structures.

The PESTLE Analysis is used as a tool of situational analysis for business evaluation purposes and is one of the most used models in the evaluation of the external business environment that is highly dynamic.

For anyone faced with the challenge of making strategic decisions, this book will show readers how to choose the strategic models best suited to their needs.

Fleshy Fruits are a late acquisition of plant evolution. In addition of protecting the seeds, these

specialized organs unique to plants were developed to promote seed dispersal via the contribution of frugivorous animals. Fruit development and ripening is a complex process and understanding the underlying genetic and molecular program is a very active field of research. Part of the ripening process is directed to build up quality traits such as color, texture and aroma that make the fruit attractive and palatable. As fruit consumers, humans have developed a time long interaction with fruits which contributed to make the fruit ripening attributes conform our needs and preferences. This issue of *Frontiers in Plant Science* is intended to cover the most recent advances in our understanding of different aspects of fleshy fruit biology, including the genetic, molecular and metabolic mechanisms associated to each of the fruit quality traits. It is also of prime importance to consider the effects of environmental cues, cultural practices and postharvest methods, and to decipher the mechanism by which they impact fruit quality traits. Most of our knowledge of fleshy fruit development, ripening and quality traits comes from work done in a reduced number of species that are not only of economic importance but can also benefit from a number of genetic and genomic tools available to their specific research communities. For instance, working with tomato and grape offers several advantages since the genome sequences of these two fleshy fruit species have been deciphered and a wide range of biological and genetic resources have been developed. Ripening mutants are available for tomato which constitutes the main model system for fruit functional genomics. In addition, tomato is used as a reference species for climacteric fruit which ripening is controlled by the phytohormone ethylene. Likewise, grape is a reference species for non-climacteric fruit even though no single master switches controlling ripening initiation have been uncovered yet. In the last period, the genome sequence of an increased number of fruit crop species became available which creates a suitable situation for research communities around crops to get organized and information to be shared through public repositories. On the other hand, the availability of genome-wide expression profiling technologies has enabled an easier study of global transcriptional changes in fruit species where the sequenced genome is not yet available. In this issue authors will present recent progress including original data as well as authoritative reviews on our understanding of fleshy fruit biology focusing on tomato and grape as model species.

Now in its third edition, this multi-volume *Encyclopedia of Management*, has been revised and updated to chart the major developments that have occurred in: digital technologies; ethics and governance-related issues; innovation; emerging markets; organizational networks; and new avenues of sustainable business growth. Providing comprehensive coverage of the field of management the encyclopedia spans thirteen subject volumes plus and index, providing a landmark work of reference for scholars, students and professionals. New to this edition: *Technology & Innovation Management*, Volume 13, V K Narayanan & Gina O'Connor. The encyclopedia is available online through Wiley Online Library, a major database of Journals, Handbooks and reference in the field.

This new edition of Friedman's landmark book explains the flattening of the world better than ever- and takes a new measure of the effects of this change on each of us.

Assuming no prior knowledge, the second edition of *Foundations of Economics* introduces students to both microeconomic and macroeconomic principles. This is the ideal text for foundation degrees and non-specialist courses for first year undergraduates.

This book is the first authoritative, in-depth publication about global midwifery and the contribution of skilled professional midwives to the provision of high quality maternity care, reductions in maternal and newborn mortality and morbidity. It demonstrates actions that are contributing to the achievement of the 2030 Sustainable Development Goals through partnership with women and their families, enabling them to 'survive, thrive and transform'. The book explores how the world is becoming more connected through globalisation, advances in

technology and innovation and yet more inequitable as women and children are disproportionately affected by issues such as poverty, environmental vulnerability, hunger, conflict, violence, and discrimination. It considers how midwives contribute to maternal and newborn health, leading to greater equity and empowerment and, ultimately, strengthening health systems. The 'three pillars' of midwifery are discussed: regulation, education and professional midwives' associations. The importance of evidence-based care is explored along with different models of midwifery and the challenges of developing professional leadership. This book also considers women's human rights to sexual and reproductive health and respectful maternity care, stressing the importance of cultural sensitivity and contextually appropriate approaches. Midwives and other professionals will benefit from this reliable resource that indicates direction and provides information about the principles and practice of professional midwifery. This text also provides universities, organisations, and individuals with a highly relevant resource to better equip them for international midwifery practice. It finally offers policy makers a reliable source of evidence-based information for consideration in various evolving national and international situations. .

Sustainability is a fairly old concept, born in the 18th century in the field of forestry, within a mono-functionality perspective. The concept has considerably evolved in the last few years towards a multi-functionality context, with applications reported in practically all areas of economic interest. On the other hand, modern sustainability is a complex problem, for two reasons: a) The multiplicity of functions of a very different nature involved in the process and b) The manner in which different segments of the society or stakeholders perceive the relative importance of these functions. For the above reasons, a realistic approach for dealing with the sustainability issue requires taking into consideration multiple criteria of different nature (economic, environmental and social), and in many cases within a participatory decision making framework. This book presents a collection of papers, dealing with different theoretical and applied issues of sustainability, with the help of a modern multi-criteria decision-making theory, with a single as well as several stakeholders involved in the decision-making process. Hopefully, this material will encourage academics and practitioners to alter their research in this hot and vital topic. After all, the sustainable management of the environment and its embedded resources is one of the most important, if not the major challenge of the 21st century.

Amid thorny issues of translation and appropriation, imperial rivalry, the rise of commercial authorship, and anxieties about authenticity, Barbara Fuchs traces how early modern English writers borrowed Spanish literary models, triumphantly reimagining the transnational appropriation as heroic looting.

It is almost impossible to escape the Spanish Inquisition alive. However, Edgar Allan Poe's unnamed narrator, after suffering innumerable tortures upon his body and soul in the hands of his tormenters, sees the light of the day at the very end of his sanity's tether. Even despite the lack of supernatural elements, "The Pit and the Pendulum" (1842) has enjoyed and influenced several notable movie adaptations. Animations such as The "Flinstones", TV series like "Crime Scene Investigation", to films like Roger Corman's "The Pit and the Pendulum" (1961), starring Vincent Price and some torture methods found in the "Saw" franchise, the story's famous pendulum scene is a rather fruitful source of inspirations. Yet, despite the terrific torments, the story focuses primarily on how terror is implicitly depicted through the workings of the mind. Edgar Allan Poe (1809-1849) was an American poet, author, and literary critic. Most famous for his poetry, short stories, and tales of the supernatural, mysterious, and macabre, he is also regarded as the inventor of the detective genre and a contributor to the emergence of science fiction, dark romanticism, and weird fiction. His most famous works include "The Raven" (1845), "The Black Cat" (1843), and "The Gold-Bug" (1843).

This Selected Issues paper estimates the long-run economic impact of Brexit on the United

Kingdom under two distinct assumptions for the post-Brexit relationship between the United Kingdom and the European Union. These illustrative scenarios entail different degrees of higher trade costs, a more restricted European Union migration regime and reduced foreign inward investment. A standard multicountry and multisector computable general equilibrium model is used to quantify the impact of higher trade barriers. There is substantial sectoral heterogeneity in the impact, and regions with higher concentrations of the more affected sectors are likely to confront greater losses. The empirical analysis suggests the speed of sectoral labor relocation across sectors has been relatively low in the UK. Irrespective of these empirical estimates, policies, such as retraining, would be critical to facilitate faster adjustment of the economy to the post-Brexit equilibrium thereby helping to minimize the associated costs to individuals and in aggregate.

Seminar paper from the year 2015 in the subject Business economics - Business Management, Corporate Governance, grade: 70 %, Prifysgol Cymru University of Wales, language: English, abstract: Germany is one of the leading car manufacturer industries in the world. The German automotive market convinces customer preferences around the world with companies like Volkswagen, BMW or Daimler, as confirmed by export rates of 190 billion euro through vehicles and components in 2012 (Frankfurter Allgemeine Zeitung, 2013). The Bavarian automobile manufacturer BMW is one of these highly regarded and venerated automobile brands. The enterprise BMW Group assert their top position in the premium segment with a new record in global sales of about 2.1 million automobiles in 2014. The additional brand MINI could hold the level of its sales from the previous year and, for the first time, Rolls Royce Motor Cars was able to increase the sales over 4.000 units in 2014, and thus assert the position as the market leader in the absolute luxury segment. Hawranek (2008) and Reithofer, chief executive of BMW, (BMW Group, 2015) emphasise that the company remain faithful to its strategy to continuously hold the position as the world's top seller in the premium class. The elaboration will present an environmental analysis of the BMW Group in the automotive industry with help of the principles of a PESTEL-Analysis. After a general over-view of the automotive industry in the 21st century in chapter 2, each point of the PESTEL-analysis will be processed separately in chapter 3. The conclusion in chapter 4 includes the results, an overall assessment of the BMW Group and recommendations considering the focus of the business strategy.

The second edition of Strategy: Analysis and Practice provides up-to-date coverage of strategy with an incisive and analytical approach. The author team combines their extensive experience of teaching and consulting in strategy with cutting edge research to form a comprehensive text suitable for students studying strategic management, corporate strategy or business policy modules. The book sets out to provide students with an understanding of the core concepts and economics of strategy, laying the foundations for analysing strategy on a variety of levels. With a revised structure and fewer, more concise chapters, the second edition concentrates more strategic implementation and decision making. The theory is complemented by thorough pedagogy throughout and a range of excellent case examples and longer cases furnish students with the practical applications needed to fully appreciate the consequences of strategic decisions.

This book, focused on the analysis of regional integration and dynamism in Latin American countries, takes a multidisciplinary approach to international business. It uses case studies of major industries to explore the impact of the Pacific Alliance.

Interest in biochar among soil and environment researchers has increased dramatically over the past decade. Biochar initially attracted attention for its potential to improve soil fertility and to uncouple the carbon cycle, by storing carbon from the atmosphere in a form that can remain stable for hundreds to thousands of years. Later it was found that biochar had applications in environmental and water science, mining, microbial ecology

and other fields. Beneficial effects of biochar and its environmental applications cannot be fully realised unless the chemical, physical, structural and surface properties of biochar are known. Currently many of the analytical procedures used for biochar analysis are not well defined, which makes it difficult to choose the right biochar for an intended use and to compare the existing data for biochars. Also, in some instances the use of inappropriate procedures has led to erroneous or inaccurate values for biochars in the scientific literature. Biochar: A Guide to Analytical Methods fills this gap and provides procedures and guidelines for routine and advanced characterisation of biochars. Written by experts, each chapter provides background to a technique or procedure, a stepwise guide to analyses, and includes data for biochars made from a range of feedstocks common to all presented methods. Discussion about the unique features, advantages and disadvantages of a particular technique is an explicit focus of this handbook for biochar analyses. Biochar is primarily intended for researchers, postgraduate students and practitioners who require knowledge of biochar properties. It will also serve as an important resource for researchers, industry and regulatory agencies dealing with biochar.

This work provides an innovative look at the use of open data for extracting information to detect and prevent crime, and also explores the link between terrorism and organized crime. In counter-terrorism and other forms of crime prevention, foresight about potential threats is vitally important and this information is increasingly available via electronic data sources such as social media communications. However, the amount and quality of these sources is varied, and researchers and law enforcement need guidance about when and how to extract useful information from them. The emergence of these crime threats, such as communication between organized crime networks and radicalization towards terrorism, is driven by a combination of political, economic, social, technological, legal and environmental factors. The contributions to this volume represent a major step by researchers to systematically collect, filter, interpret, and use the information available. For the purposes of this book, the only data sources used are publicly available sources which can be accessed legally and ethically. This work will be of interest to researchers in criminology and criminal justice, particularly in police science, organized crime, counter-terrorism and crime science. It will also be of interest to those in related fields such as applications of computer science and data mining, public policy, and business intelligence.

Seminar paper from the year 2014 in the subject Business economics - Company formation, Business Plans, grade: 1.3, University of Applied Sciences Hanover, course: International Management, language: English, abstract: This scientific paper is written within the scope of the Global Perspectives of International Management. A PESTEL analysis is carried out for Turkey and described with the help of its six factors. In the beginning, the concept PESTEL is explained and later applied to 'Turkey' as a practical example.

Do big bonuses really motivate bankers to work harder? Is it better to hire someone with a personality similar to your own? What impact does delivering 'service with a smile' have on employees? Introduction to Work and Organizational Behaviour answers all of these questions and more, offering insights into contemporary management practices and encouraging you to reflect critically on the realities of the workplace. Building on the success of the previous edition, this new edition offers: • New chapters

on organizational change, and diversity and people management • Brand new Links to Management videos featuring business managers and consultants discussing topics such as perception and learning • 12 new Globalization and Organization Misbehaviour vignettes illustrating contemporary organizational practice and its impact across the world • 12 new The Reality of Work boxes providing thought-provoking examples of the interconnection between society and organizational behaviour • Over 200 new references, bringing the discussion right up to date. Visit www.palgrave.com/bratton-ob to access examples of organizational behaviour in popular films such as The Imitation Game, as well as a guide to developing your skills in report writing and oral presentations, and Chinese translations of key vocabulary and chapter summaries. This new edition of Organisations and the Business Environment provides a completely revised, extended and updated edition of the original successful text. It provides contemporary and comprehensive coverage of the subject matter which is highly relevant to business and management students at undergraduate, postgraduate and professional levels. The text is written in a clear and concise style, illustrated with topical examples and data. Organisations and the Business Environment (second edition) comprises four sections: • Business Organisations ;V discusses the evolution of organisational and managerial theories and concepts with particular emphasis on their relevance in the 21st century. The different types of organisations and their missions, visions, goals and objectives are examined. • The External Business Macro-Environment ;V describes and considers the political, economic, socio-cultural, technological, ecological and legal influences on organisations, utilizing the PESTEL framework of analysis. This section includes a review of the internationalization of businesses and examines the role of GATT and the WTO, single markets and trading blocs. • The External Business Micro-Environment ;V provides a review of the market system and the nature of supply and demand. Market structures are examined in the light of monopolistic regimes and working for competitive advantage. The impact of government intervention is explored via regulatory bodies, privatization, and nationalization programmes. • Business Management ;V explores the major aspects of contemporary business organisations, including corporate governance and business ethics. In particular, this section tackles the areas of structure, culture, change, quality management and the principal functions of organisations. This textbook is a user-friendly resource with end of chapter questions, activities and assignments to consolidate learning. Its strong emphasis on topical examples enables students to understand how theory is applied in business contexts, including, GlaxoSmithKline, BT, Scottish and Newcastle, Hanson plc and a number of not-for-profit organisations. There is additional Tutor Resource material, including presentation slides, data charts, chapter summaries, questions and answers. "An excellent book...good use of learning objectives, questions and potential assignments." Paul Blakely, Lecturer, University College of Warrington.

Essays discuss technology, manufacturing, marketing, finance, capital, government policies, coalitions, competition, and leadership in the global marketplace, and look at specific cases.

Thinking Through Place on the Early Modern English Stage argues that environment and embodied thought continually shaped one another in the performance of early modern English drama. It demonstrates this, first, by establishing how characters think through their surroundings — not only how they orient themselves within unfamiliar or otherwise strange locations, but also how their environs function as the scaffolding for perception, memory, and other forms of embodied thought. It then contends that these moments of thinking through place theorise and thematise the work that playgoers undertook in reimagining the stage as the setting of the dramatic fiction. By tracing the relationship between these two registers of thought in such plays as *The Malcontent*, *Dido Queen of Carthage*, *Tamburlaine*, *King Lear*, *The Knight of the Burning Pestle*, and *Bartholomew Fair*, this book shows that drama makes visible the often invisible means by which embodied subjects acquire a sense of their surroundings. It also reveals how, in doing so, theatre altered the way that playgoers perceived, experienced, and imagined place in early modern England. This second issue in the 'World-wide workforce' series provides you with a comprehensive analysis of recruiting practices in Argentina, Austria, Belgium,

Canada, Finland, Hong Kong, India, Ireland, Korea, Norway, Singapore, Spain, Switzerland, the United Kingdom and the United States of America. This book shows how domestic recruiting conventions often differ significantly from those in other countries. Comparative desk research, focus interviews with and online polling of HRM professionals in the mentioned countries made us realise how much cultural factors can affect job search strategies across the globe. World-wide workforce provides an easy-to-use reference for those aiming at a cross-border career, or those interested in international HRM issues.

The oomycete genus *Phytophthora* represents one of the most notorious groups of tree pathogens in natural and semi-natural forest ecosystems. Since the discovery in the 1960s of the invasive *P. cinnamomi*, threatening some of the world's richest plant communities in Australia, numerous *Phytophthora* diseases have been reported on forest trees worldwide, which were previously unknown to science. The most notable examples include the oak and beech declines triggered by different *Phytophthora* spp. in Europe and North America, the findings of sudden oak death and sudden larch death caused by *P. ramorum* in the Western USA and the U.K., respectively, and the association of *P. austrocedri* with mal del ciprés in Argentina and juniper decline in the U.K. All these epidemic events are driven by exotic invasive *Phytophthora* species, introduced through infested nursery plants from their native overseas environments. In recent years, many independent surveys have studied the diversity of *Phytophthora* species and the diseases they are causing across a diverse range of forests and other natural ecosystems. This Special Issue presents papers on *Phytophthora* surveys performed in different biogeographic regions and addresses the pathways, and ecological and economic impacts of these invasive forest pathogens.
