Fish and other seafood have always been considered as an important part of human diet and have also long been recognized as a health-promoting food for human nutrition. However, managing aquatic food resources remains a challenge as the human population is expanding and overfishing poses a threat to fishing reserves in several areas. Aquaculture is the alternative solution for food production from the sea. According to the FAO, aquaculture is probably the fastest growing food-producing sector and can be a sustainable solution for fish production. In order to maximize marine food production and achieving sustainable management of the aquatic environment, knowledge about aspects of fisheries and aquatic animal health is very important. Trends in Fisheries and Aquatic Animal Health covers some basic and applied topics in fishery management and fish health with a focus on European regions. The textbook is a combination of reviews and research articles. Topics covered in the book include challenges in fishery management, environmental impacts on fisheries, fish health (pharmacology, histopathology, stress response), telemetry techniques in fisheries research, and

specific case studies of regional marine species in localized fisheries. This textbook is a useful resource for graduates and professionals involved in advanced training courses for aquaculture and fishery management.

A guidebook to the Gran Paradiso National Park in the Valle d'Aosta, in north-western Italy, describing the 12-stage 148km Alta Via 2 trek, and 28 day

walks ranging from 2 to 33km. The first part of this guidebook describes the Alta Via 2, a strenuous trek in 12 day stages from Chardonnay to Courmayeur, passing beneath the foot of Mont Blanc, which is best suited to experienced Alpine hikers. The successive chapters contain walks suitable for visitors who prefer to make their base in a valley hotel or campsite and embark on shorter excursions. A handful of excellent traverses is also included, brilliant routes that convey walkers to wild exhilarating heights and act as links between the valleys. Suggestions are given for combining these into a further series of long-distance routes. The guidebook provides plenty of practical information on getting to and around the region, as well as advice on accommodation, language, equipment, planning and how to make the most out of any adventure in one of Italy's most spectacular national parks. A wealth of detail of information on wildlife, history, geology and flowers is also included.

Nickle (Beltsille Agricultural Research Center of the USDA) has engaged 29 internationally known experts to replace the classic work of I.N. Filipjev (1934) and its translated revision (Schuurmans Stekhoven, Jr., 1941) with a modern work taking note of 188 additional genera, and 4,650 more species.

First multi-year cumulation covers six years: 1965-70.

This is a timely volume in view of the considerable interest currently shown in the preservation of our cultural heritage, and the extensive and growing literature on the subject.

Unfortunately, the latter is to be found in a wide variety of published sources, some aimed at a very specific readership and therefore not all that accessible to those who need this resource. The present volume draws together a spectrum of biodeterioration work from across the world to provide an overview of the materials examined and the methodologies employed to elucidate the nature of the problems, as well as an extensive and current bibliographical resource on lichen biodeterioration. Biodeterioration of historical and culturally important stone substrata is a complex problem to be addressed. Easy, risk-free solutions are simply not available to be dealt with by other than a wide range of expertise. Successful resolution of this issue will inevitably require a multidisciplinary effort, where biologists work in close cooperation with ecologists, geologists, geochemists, crystallographers, cultural property conservators, archaeologists, anthropologists, and historians in order to recommend the most effective management scheme. The advantage of this approach is obvious: multidisciplinary management teams with good leadership can ask more appropriate questions while developing much more thoughtful and informed decisions.

This issue of the Portuguese Studies Review presents essays by Leandro Alves Teodoro, Martin M. Elbl and Ivana Elbl, Isabel dos Guimarães Sá and Hélder Carvalhal, Christian Fausto Moraes dos Santos, Gisele Cristina da Conceição, and Fabiano Bracht, Sandrina Berthault Moreira, and Luís Miguel Pereira Farinha. The topics covered range from the history of fourteenth- and fifteenth-century Portuguese synods to the material culture of late fifteenth century Portuguese nobility, epistolary perspectives on Portuguese interaction with Italy and with the Roman Curia in the fifteenth century,

the use and benefits of seafood in early Portuguese settlements in Brazil, a legal overview of the administrative frameworks for Portuguese road-building in the early twentieth century, and the comparative use of econometric indices of development to modelling Portuguese data. The issue also contains shorter pieces by Douglas L. Wheeler and Michel Cahen.

This volume collects novel contributions to comparative generative linguistics that “rethink” existing approaches to an extensive range of phenomena, domains, and architectural questions in linguistic theory. At the heart of the contributions is the tension between descriptive and explanatory adequacy which has long animated generative linguistics and which continues to grow thanks to the increasing amount and diversity of data available to us. The chapters address research questions in comparative morphosyntax, including the modelling of syntactic categories, relative clauses, and demonstrative systems. Many of these contributions show the influence of research by Ian Roberts and collaborators and give the reader a sense of the lively nature of current discussion of topics in morphosyntax and morphosyntactic variation.

Tropical emerging diseases pose a significant risk for the circulation of old and new pathogens in areas previously unknown, also implying the possibility of new morbidities and mortalities and new consequences for naïve populations. Globalization, migration and travel are key factors for tropical diseases, and represent the need for integration of tropical medicine, travel medicine and epidemiology in the understanding of such complex

situations. Neglected tropical diseases such as leprosy or Chagas disease, arboviral diseases, HIV, Ebola, and arenaviral infections are just a few examples. This book tries to update significant epidemiological and clinical research in many aspects with a multinational perspective.

Il meglio della cucina del Piemonte e della Val d'Aosta, un'ampia selezione di piatti della tradizione per recuperare i più autentici sapori di casa nostra: antipasti, primi, secondi e dessert.

La crisi finanziaria iniziata nel 2008 ha inevitabilmente avuto pesanti conseguenze a livello nazionale e regionale e gli effetti si stanno, dopo 6 anni, ancora manifestando in tutti i settori produttivi, in modo particolare nell'edilizia. Malgrado il riconosciuto ruolo anticiclico del settore delle costruzioni che, da solo, è in grado di risollevare l'intera economia, non sono state assunte, dai principali decisori, misure e provvedimenti in grado di riattivare ricadute positive. La fotografia che emerge da un'analisi puntuale degli principali indicatori economici sull'andamento del settore delle costruzioni in Piemonte e in Valle d'Aosta, con approfondimenti sul territorio, mostra un settore in gravi difficoltà, dove la sopravvivenza delle imprese è minata dalla forte carenza di risorse pubbliche, dai ritardati pagamenti da parte della Pubblica Amministrazione e dalle difficoltà di accesso al credito. Attraverso l'analisi delle principali dinamiche e strutture la ricerca vuole essere uno strumento utile ad individuare non solo i punti critici del settore delle costruzioni ma anche i punti di forza e le possibili peculiarità sulla quali le imprese possono puntare per affrontare e superare la difficile situazione congiunturale.

I musei sono luoghi in cui si possono conoscere storie e cose capaci di suscitare emozioni: ogni museo ha la sua storia e la sua ragion d'essere. Il Museo nazionale della Emigrazione Italiana nasce con l'obiettivo di rappresentare un contributo alla comprensione del fenomeno dell'emigrazione, con particolare attenzione al periodo che va dalla fine dell'Ottocento sino ai giorni nostri, posizionandosi come momento centrale per la lettura di un fenomeno portante nella storia politica, economica e sociale del nostro paese. Gli studi sull'emigrazione italiana rappresentano, nel quadro della storiografia sull'Italia post-unitaria, un tema di particolare interesse, che si è arricchito, nel corso degli ultimi anni, di importanti e significativi contributi che hanno consentito di approfondire le motivazione delle peregrinazioni dei nostri emigranti. Tante sono le realtà esistenti sul territorio nazionale per raccontare con diverse chiavi di lettura il fenomeno, nel suo complesso, di volta in volta analizzandone le specificità. Proprio alla luce di queste numerose esperienze si è sentita la necessità di fornire una visione quanto più esaustiva e completa del fenomeno migratorio grazie ad una metodologia di comunicazione integrata, nell'intento di far emergere l'organicità del flusso migratorio nazionale.
