Reminiscent of old whaling stories, *Four-Day Planet* follows the story of Walter Boyd, a scrappy 17-year-old reporter working for his father at the Port Sandor Times. Walt gets tied up in the adventures of the sea-monster hunters on Fenris—a barely-habitable planet with a 2,000-hour day. The prized-and only-commodity on Fenris is tallow-wax, a miraculous material harvested from the dangerous seas of the planet. While being set in a grand sci-fi universe, the book packs in more about intrigue, betrayal, and the grit required to survive on a backwater planet of the Federation. The book was later re-published as a “two-for-one” with *Lone Star Planet* (originally titled *A Planet for Texans*). This book is part of the Standard Ebooks project, which produces free public domain ebooks.

After World War II, a powerful conviction took hold among American intellectuals and policymakers: that the United States could profoundly accelerate and ultimately direct the development of the decolonizing world, serving as a modernizing force around the globe. By accelerating economic growth, promoting agricultural expansion, and encouraging the rise of enlightened elites, they hoped to link development with security, preventing revolutions and rapidly creating liberal, capitalist states. In *The Right Kind of Revolution*, Michael E. Latham explores the role of modernization and development in U.S. foreign policy from the early Cold War through the present. The modernization project rarely went as its architects anticipated. Nationalist leaders in postcolonial states such as India, Ghana, and Egypt pursued their own independent visions of development. Attempts to promote technological solutions to development problems also created unintended consequences by increasing inequality, damaging the environment, and supporting coercive social policies. In countries such as Guatemala, South Vietnam, and Iran, U.S. officials and policymakers turned to modernization as a means of counterinsurgency and control, ultimately shoring up dictatorial regimes and exacerbating the very revolutionary dangers they wished to resolve. Those failures contributed to a growing challenge to modernization theory in the late 1960s and 1970s. Since the end of the Cold War the faith in modernization as a panacea has reemerged. The idea of a global New Deal, however, has been replaced by a neoliberal emphasis on the power of markets to shape developing nations in benevolent ways. U.S. policymakers have continued to insist that history has a clear, universal direction, but events in Iraq and Afghanistan give the lie to modernization's false hopes and appealing promises.

CHILI HOT GMAT MATH REVIEW will help readers develop the skills and mindset needed to score high on the quantitative section of the GMAT exam. Each hand-selected problem comes with a Classification, Snapshot, and Chili Rating. Classification serves to identify each problem according to category or sub-category. Snapshot highlights why that particular problem was chosen, including the underlying problem-solving principle or strategic approach. Chili Rating helps candidates gauge the estimated difficulty level of a given problem. A single chili indicates that the estimated difficulty level of a given problem is "mild" (500 to 590 difficulty level), two chilies spell "hot" (600 to 690 difficulty level),

and three chilies signal "very hot" (700 or above difficulty level). By studying problems of varying difficulty, candidates will learn to maintain discipline on easy but tricky math problems and also to exercise flexibility when deciding on multiple approaches and time-saving shortcuts for use in tackling harder, more involved problems. Note to readers: This book contains the excerpted math sections from the parent title "Chili Hot GMAT: 200 All-Star Problems to Get You a High Score on Your GMAT Exam."

Col. James V. Young spent almost twenty years in Asia, including fourteen in Korea. Here, he writes with the expertise of an old Korea hand about a period that saw South Korea develop from an agrarian economy to a modern industrial state. Young volunteered in 1969 for a new program aimed at creating area specialists within the military. In 1975, after four years of training in Korean language and culture, he witnessed how American diplomats convinced Park ChungHee, the South Korean president, not to develop his own nuclear weapons. Later, from the perspective of a military attaché, Young saw the mistrust that characterized U.S.Korean relations during the 1970s. He provides new insights into the behindthescenes efforts to derail President Jimmy Carter's troop withdrawal policies and argues that the United States was caught flatfooted by such crucial episodes as the coup of 1979 and the 12/12 Incident. Young's memoir straddles the line between military and diplomatic history and offers entertaining and often humorous stories. Those interested in the region, the issues, and military life off the battlefield will value this book.
