The order of the old world has ended and a new one has been born. Please rest assured that the world is not about to end, just because a few extremist are saying so. The Author of this book, has lived through many of the fears of similar extremist, who seemed to say what they would do if they were God. The real God, has no form and no pronoun and does not live in a Mansion, and, not about to take a tantrum and destroy the fantastic Master-Piece, we call planet Earth, created eons of time ago.

This book takes young readers on a spectacular journey around the world, from the highest mountain peaks to the very bottom of the ocean. Full of fascinating facts, this book uses jaw-dropping landscapes and richly illustrated maps to explain the wonderful secrets behind Planet Earth. Stunning but accessible

illustrations by Stephanie Fizer Coleman, and large format creates extra impact. Full of rich vocabulary, with clear simple explanations. Includes links to websites with video clips, games and activities and maps to find out more about the people, places and geography of our planet.

An exploration of the cutting-edge technology that will enable us to confront the realities of climate change. For decades scientists and environmentalists have sounded the alarm about the effects of global warming. We are now past the tipping point. As floods, storms, and extreme temperatures become our daily reality, "Reduce, Reuse, Recycle" efforts aren't enough anymore. In *Hacking Planet Earth*, New York Times bestselling author Thomas Kostigen takes readers to the front lines of geoengineering projects that scientists, entrepreneurs, engineers, and other visionaries around the world are developing to solve the problems associated with climate change. From giant parasols hovering above the Earth to shield us from an unforgiving sun, to lasers shooting up into clouds to coax out much-needed water, Kostigen introduces readers to this inspiring work and the people who are spearheading it. These futurist, far-thinking, world-changing ideas will save us, and *Hacking Planet Earth* offers readers their new vision for the future.

The impact of *The Late Great Planet Earth* cannot be overstated. The New York Times called it the "no. 1 non-fiction bestseller of the decade." For Christians and non-Christians of the 1970s, Hal Lindsey's blockbuster served as a wake-up call on events soon to come and events already unfolding -- all leading up to the greatest event of all: the return of Jesus Christ. The years since have confirmed Lindsey's insights into what biblical prophecy says about the times we live in. Whether you're a church-going believer or someone who wouldn't darken the door of a Christian institution, the Bible has much to tell you about the imminent future of this planet. In the midst of an out-of-control generation, it reveals a grand design that's unfolding exactly according to plan. The rebirth of Israel. The threat of war in the Middle East. An increase in natural catastrophes. The revival of Satanism and witchcraft. These and other signs, foreseen by prophets from Moses to Jesus, portend the coming of an antichrist . . . of a war which will bring humanity to the brink of destruction . . . and of incredible deliverance for a desperate, dying planet.

April, 1972. Three legendary astronauts embark on mankind's boldest space voyage yet—a yearlong mission to fly past our nearest planetary neighbor, Venus. What follows will be a journey more harrowing than any of them can imagine. *Island of Clouds*, the first full-length novel in the *Altered Space* series, is a gripping space epic based on NASA mission proposals from the late 1960s. Touching on literary influences ranging from Borges and Bukowski to the Book of Job, this story of exploration also offers a literary probing of the dark reaches of human nature: alcoholism, capitalism, authority, fatherhood, and the ephemeral nature of desire. The titles in the *Altered Space* series are wholly separate narratives, but all deal with the mysteries of space and time, progress and

circularity. Each one is an ens? of words in which orbits of spacecraft, moons, planets, and people allow us fresh perspectives on the cycles of our own lives. "An audacious and concrete proposal...Half-Earth completes the 86-year-old Wilson's valedictory trilogy on the human animal and our place on the planet." —Jedediah Purdy, *New Republic* In his most urgent book to date, Pulitzer Prize-winning author and world-renowned biologist Edward O. Wilson states that in order to stave off the mass extinction of species, including our own, we must move swiftly to preserve the biodiversity of our planet. In this "visionary blueprint for saving the planet" (Stephen Greenblatt), *Half-Earth* argues that the situation facing us is too large to be solved piecemeal and proposes a solution commensurate with the magnitude of the problem: dedicate fully half the surface of the Earth to nature. Identifying actual regions of the planet that can still be reclaimed—such as the California redwood forest, the Amazon River basin, and grasslands of the Serengeti, among others—Wilson puts aside the prevailing pessimism of our times and "speaks with a humane eloquence which calls to us all" (Oliver Sacks).

Move to another planet? Sounds interesting! In our imaginary spaceship, let's check out the planets in our solar system. Mercury is closest, but it has no air, and it's either sizzling hot or bitterly cold. The atmosphere on Venus is poisonous; plus, human beings would cook there. Mars might work, but you'd always have to be in a protective shelter. And if you got to the outer planets, you couldn't even land as they are mostly made of gas! Our home planet is looking good. Why is Earth so comfortable for plants, animals, and people? As Robert E. Wells explains, it's because of our just-right position from the sun, marvelous atmosphere, and abundant water. Our planet is very special and perfect for us, and that's why we must do all we can to keep Earth healthy.

Earth as an Evolving Planetary System, Second Edition, examines the various subsystems that play a role in the evolution of the Earth. These subsystems include such components as the crust, mantle, core, atmosphere, oceans, and life. The book contains 10 chapters that discuss the structure of the Earth and plate tectonics; the origin and evolution of the crust; the processes that leave tectonic imprints in rocks and modern processes responsible for these imprints; and the structure of the mantle and the core. The book also covers the Earth's atmosphere, hydrosphere, and biosphere; crustal and mantle evolution; the supercontinent cycle; great events in Earth history; and the Earth in comparison to other planets. This book is meant for advanced undergraduate and graduate students in Earth Sciences, with a basic knowledge of geology, biology, chemistry, and physics. It also may serve as a reference tool for specialists in the geologic sciences who want to keep abreast of scientific advances in this field. Kent Condie's corresponding interactive CD, *Plate Tectonics and How the Earth Works*, can be purchased from Tasa Graphic Arts here:

Robert walked towards the hospital emergency entrance. The smell of death was overpowering. Many of the cars blocking the ambulance entrance had their lifeless occupants slumped over the steering wheels or their heads propped against the car windows. The sliding doors were propped open by more bodies of virus casualties. Robert looked deeper into the dark hospital and turned around. The hospital was not receiving more patients. Jillian stared over the city of Hong Kong from the eighteenth floor of the luxury hotel. Although it was the middle of the day, the entire city was dead. Not a car, boat or person was moving. The hotel had no water, phone or electricity. Despair washed over her as she thought of her children. She prayed that her two boys survived the virus. The problem was that they were a very large ocean away. Adapting to the new world was difficult. Finding and protecting your family was an even greater challenge.

Dolly Day, a teacher, encounters charismatic interventions: God's voice, angels, visions of Indians, communication from "the other side," and the Virgin Mary. After nuns' messages and disappearances, premonitions of a heart attack and possible suicide, her findings show that by using God and nature, people heal.

She writes a screenplay showing humans in chakra colors: red, orange, yellow, green, blue, purple, and white. Goodness, forgiveness, or kindnesses performed elevates the souls to another level. Medical doctors talk about the latest research. Dolly's soul leaves her body. She becomes a light body and receives messages from the other side. Consenting to God's plan to show others the meaning of love, she illustrates twenty unexpected acts of kindness to spread love throughout the world. Realizing people are electric and transforming their hearts into light beings for God, the world turns to love and His hands.

The #1 international bestseller: An astronaut's tour of our planet from the heavens, featuring 150 mesmerizing photographs (with commentary) from the International Space Station. During his six-month mission to the International Space Station, astronaut Tim Peake became the first British astronaut to complete a spacewalk -- and, perhaps more astonishingly, the first to run an entire marathon in space. During his historic mission, he captured hundreds of dazzling photographs, the very best of which are collected here. Tim captures the majesty of the cosmos and of the planet we call home: breath-taking aerial photos of the world's cities illuminated at night, the natural beauty of the northern lights, and unforgettable views of oceans, mountains, and deserts. Tim's lively stories about life in space appear alongside these photographs, including the tale from which the title is taken: his famous wrong number dialed from space, when he accidentally called a stranger and asked: "Hello, is this planet Earth?" With this truly unique perspective on the incredible sights of our planet, Tim demonstrates that while in space, hundreds of miles above his friends and family, he never felt closer to home.

A heart-wrenching romance full of twists that are sure to bring tears to readers' eyes, from Cat Jordan, author of *The Leaving Season*. How long does it take to travel twenty light years to Earth? How long does it take to fall in love? To the universe, eight days is a mere blip, but to Matty Jones, it may be just enough time to change his life. On the hot summer day Matty's dad leaves for good, a strange girl suddenly appears in the empty field next to the Jones farm—the very field in rural Pennsylvania where a spaceship supposedly landed fifty years ago. She is uniquely beautiful, sweet, and smart, and she tells Matty she's waiting for her spaceship to pick her up and return her to her home planet. Of course she is. Matty has heard a million impossible UFO stories for each of his seventeen years: the conspiracy theories, the wild rumors, the crazy belief in life beyond the stars. When he was a kid, he and his dad searched the skies and studied the constellations. But all of that is behind him. Dad's gone—but now there's Priya. She must be crazy...right? As Matty unravels the mystery of the girl in the field, he realizes there is far more to her than he first imagined. And if he can learn to believe in what he can't see: the universe, aliens...love...then maybe the impossible is possible, after all.

Four people are born every second of every day. Conservative estimates suggest that there will be 10 billion people on Earth by 2050. That is billions more than the natural resources of our planet can sustain without big changes in how we use and manage them. So what happens when vast population growth endangers the world's food supplies? Or our water? Our energy needs, climate, or environment? Or the planet's biodiversity? What happens if some or all of these become critical at once? Just what is our future? In *Tipping Point for Planet Earth*, world-renowned scientists Anthony Barnosky and Elizabeth Hadly explain the growing threats to humanity as the planet edges toward resource wars for remaining space, food, oil, and water. And as they show, these wars are not the nightmares of a dystopian future, but are already happening today. Finally, they ask: at what point will inaction lead to the break-up of the intricate workings of the global society? The planet is in danger now, but the solutions, as Barnosky and Hadly show, are still available. We still have the chance to avoid the tipping point and to make the future better. But this window of opportunity will shut within ten to twenty years. *Tipping Point for Planet Earth* is the wake-up call we need. Drawing on the latest scientific research, a compelling introduction to the changes taking place in Earth's climate describes how water, air, and other climate systems shape our world, and how a disruption in one part of the system can spread through the entire planet.

#1 NEW YORK TIMES BESTSELLER * "The Uninhabitable Earth hits you like a comet, with an overflow of insanely lyrical prose about our pending Armageddon."--Andrew Solomon, author of *The Noonday Demon* With a new afterword It is worse, much worse, than you think. If your anxiety about global warming is dominated by fears of sea-level rise, you are barely scratching the surface of what terrors are possible--food shortages, refugee emergencies, climate wars and economic devastation. An "epoch-defining book" (*The Guardian*) and "this generation's *Silent Spring*" (*The Washington Post*), *The Uninhabitable Earth* is both a travelogue of the near future and a meditation on how that future will look to those living through it--the ways that warming promises to transform global politics, the meaning of technology and nature in the modern world, the sustainability of capitalism and the trajectory of human progress. *The Uninhabitable Earth* is also an impassioned call to action. For just as the world was brought to the brink of catastrophe within the span of a lifetime, the responsibility to avoid it now belongs to a single generation--today's. Praise for *The Uninhabitable Earth* "The Uninhabitable Earth is the most terrifying book I have ever read. Its subject is climate change, and its method is scientific, but its mode is Old Testament. The book is a meticulously documented, white-knuckled tour through the cascading catastrophes that will soon engulf our warming planet."--Farhad Manjoo, *The New York Times* "Riveting. . . . Some readers will find Mr. Wallace-Wells's outline of possible futures alarmist. He is indeed alarmed. You should be, too."--*The Economist* "Potent and evocative. . . . Wallace-Wells has resolved to offer something other than the standard narrative of climate change. . . . He avoids the 'eerily banal language of climatology' in favor of lush, rolling prose."--Jennifer Szalai, *The New York Times* "The book has potential to be this generation's *Silent Spring*."--*The Washington Post* "The Uninhabitable Earth, which has become a best seller, taps into the underlying emotion of the day: fear. . . . I encourage people to read this book."--Alan Weisman, *The New York Review of Books*

Planet Earth is the most spectacular look at our planet that has ever been broadcast. It has made millions of viewers aware of the breathtaking beauty and variety of life on our planet, and just as importantly how fragile that life can be. The premise of *Planet Earth - The Future* is to identify environmental and conservation issues that surround some of the sequences in *Planet Earth*, and put these issues to leading commentators, including NGO's, politicians and religious leaders James Leape (WWF International), Jeffrey McNeely (World Conservation Union), and

the Archbishop of Canterbury to name but a few of the 35 contributors. We are living in destructive times, and our responsibility for the planet's stewardship is something none of us can afford to ignore. Comprised of transcripts from the series interviews, thoughtfully edited and abbreviated, this compelling and insightful book serves as a timely reminder of what needs to be done and what can be done to keep Planet Earth alive.

For that, which is YOU, is far more capable than you ever imagined. In you, is eternity! I believe in you; and know you will do the right thing. Thank you! Paul Thor

Why Earth's life-friendly climate makes it exceptional—and what that means for the likelihood of finding intelligent extraterrestrial life We have long fantasized about finding life on planets other than our own. Yet even as we become aware of the vast expanses beyond our solar system, it remains clear that Earth is exceptional. The question is: why? In *Lucky Planet*, astrobiologist David Waltham argues that Earth's climate stability is what makes it uniquely able to support life, and it is nothing short of luck that made such conditions possible. The four billion year-stretch of good weather that our planet has experienced is statistically so unlikely that chances are slim that we will ever encounter intelligent extraterrestrial others. Citing the factors that typically control a planet's average temperature—including the size of its moon, as well as the rate of the Universe's expansion—Waltham challenges the prevailing scientific consensus that Earth-like planets have natural stabilizing mechanisms that allow life to flourish. A lively exploration of the stars above and the ground beneath our feet, *Lucky Planet* seamlessly weaves the story of Earth and the worlds orbiting other stars to give us a new perspective of the surprising role chance plays in our place in the universe.
