In the present monograph, we offer current insights into polymyalgia rheumatica and giant cell arthritis. Both diseases are typical for advanced age, and their incidences increase with aging. Both diseases are a center point of interest not only for rheumatologists, gerontologists, ophthalmologists or neurologists, but also for general practitioners. Early diagnosis and rapid treatment, mainly with glucocorticoids can save one of the most precious senses-vision. Damage to other organs (heart, aorta, coronary arteries, liver, lungs, kidneys), which are supplied by the arteries affected by ischemic syndrome in the setting of giant cell arthritis, has serious consequences as well. Late diagnosis of giant cell arthritis can have fatal consequences for affected patients. It is a matter of fact that the human population is aging. Therefore, more attention has to be paid not only to diagnosis, clinical course and treatment of rheumatic diseases in elderly, but also to their genetic, immunologic, endocrinologic, chronobiologic

mechanisms, and state-of-the-art diagnostic modalities. I am convinced that the interdisciplinary research of the diseases will allow us to diagnose and treat the rheumatic diseases even faster and more effectively in the future.

Polymyalgia rheumatica (PMR) and giant cell arteritis (GCA) are related conditions occurring almost exclusively in older people. Polymyalgia rheumatica is considered to be the rheumatic disease that is subject to the widest variations of clinical practice, partially due to the considerable uncertainty related to diagnosis and outcomes. Giant cell arteritis, an inflammatory form of vasculitis, may present with a broad spectrum of clinical manifestations and can be complicated by acute ischemic events, the most serious of which is permanent blindness. Early recognition and adequate treatment of the condition is thus necessary to prevent patients' loss of independence and to maintain their quality of life. Part of the Oxford Rheumatology Library series, Polymyalgia Rheumatica and Giant Cell Arteritis provides quick and practically relevant information on several aspects of the diseases, particularly on diagnosis and management, with the ultimate aim of improving the patient's care. Chapters highlight current concepts of pathogenesis, recent advances of diagnostic and therapeutic approaches, and the ongoing research into the identification of new biomarkers and corticosteroid-sparing medications. Each chapter is complemented with key message boxes

highlighting the most relevant information for clinical practice. This concise but comprehensive reference is particularly suited for rheumatologists, general practitioners, and other professionals caring for patients with PMR and GCA.

autoimmune disease. Autoimmune diseases are a family of more than 100 chronic, and often disabling, illnesses that develop when underlying defects in the immune system lead the body to attack its own organs, tissues, and cells. In *Handbook of Autoimmune Disease*, the editors have gathered in a comprehensive handbook a critical review, by renowned experts, of more than 100 autoimmune diseases, divided into two main groups, namely systemic and organ-specific autoimmune diseases. A contemporary overview of these conditions with special emphasis on diagnosis is presented. Each chapter contains the essential information required by attending physicians as well as bench scientists to understand the definition of a specific autoimmune disease, the diagnostic criteria, and the treatment.

Among the vast amount of patients who suffer from pain those should be identified in whom the symptoms could be effectively relieved with low-dose glucocorticoids. A patient with typical polymyalgia rheumatica that responds well to glucocorticoids can be treated in the primary care. Suspicion of temporal arteritis, atypical clinical features and non-satisfactory response to treatment are indications for a consultation in the specialized care.

Polymyalgia Rheumatica (PMR) and Giant Cell Arteritis (GCA) are linked rheumatic inflammatory illnesses that affect older people - generally, people over 50. They are chronic autoimmune conditions that cause untold misery, pain and debilitation. More acutely, undiagnosed GCA can lead to blindness, which is irreversible. In the United Kingdom each year, there are an estimated 40,000 new cases of PMR and 10,000 new cases of GCA, with a significant degree of overlap, many people having both conditions together. Many people, when they first get their diagnosis, have never heard of PMR or GCA before, and have to get used to the idea of having a chronic inflammatory illness, together with the steroid therapy that is the only standard effective treatment widely available. Several months into their diagnosis they often have many questions about why their journey through PMR and GCA isn't as smooth as they were led to expect. This book is written to give people who have Polymyalgia Rheumatica, or Giant Cell Arteritis (sometimes known as temporal arteritis), and their friends and

carers, information about these illnesses, drawing on recent research. It also aims to give insights into what it is like to have these conditions, and how sufferers and those close to them can help themselves in the self-management of their condition towards recovery. It is not intended to replace information provided by your doctor or clinician. This second edition incorporates recommendations by international working groups on the diagnosis and management of PMR and GCA, and findings from research published since 2014. A full references list and index have been added. The author, Dr Kate Gilbert, PhD, is a semi-retired lecturer in management development, now concentrating on writing and voluntary work. She has spent several years, as a PMR survivor, studying these conditions and working as a volunteer with the PMR and GCA charity, PMRGCAuk. A former Chair of Trustees, she helps to edit the charity's website www.pmrgcauk.com and its regular newsletter. She has also served as a patient representative on a number of working groups, including the ACR/EULAR group to develop international recommendations for PMR, and has recently contributed a chapter on patient education to a medical textbook on PMR and GCA published by Oxford University Press.
