What is going on with three year olds is so much more than meets the eye. This book series, *Misbehavior is Growth*, documents the age-related stages that children go through.

These are times when children fall apart, becoming demanding, clingy, whiny, or aggressive. But on other side of this "stage" is an astonishing new skill set. Their brain was going through an "upgrade." This book offers the popular summaries, as for three year olds, as seen at The Observant Mom. In addition, it offers, for each milestone, detailed analysis, conflict resolution ideas, and ways to nurture the growth. So much grows mentally in children aged three: their ability to get around new places; their ability to categorize, use, and compare large amounts of data. What is most important, though, as argued, is core personality integration. Three year olds develop a conscious idea of who they are as a person, making this one of the most sensitive times of their entire development. And in all this, their wild imaginations, the famous monsters they see in their closet, may play a bigger role than we truly know. This research overwhelmingly proves what so many have tried to say: children are more like flowers that unfold than clay to mold. There is a biologically determined apparatus that does the lion's share of mental growth. We couldn't stop it if we tried! Let's get this otherwise unstoppable wave that is their development. The idea behind Misbehavior is Growth is that these age-related behaviors are an instinctual call from children to adults so that adults come to them at developmentally critical times. Thus, don't "ignore" the stages. Lean into them as the investment opportunity they are! It's not misbehavior: it's growth!

This book is a simple to follow, step-by-step process to toilet train your child. It answers your burning questions, busts myths and misconceptions and tells you what to do if there are mishaps, problems or hiccups.

Decades of research have demonstrated that the parent-child dyad and the environment of the family—“which includes all primary caregivers”—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions,

including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Potty Training*. Toddlers—commonly defined as children aged between two and five years old—can be a horribly misunderstood bunch. What most parents view as bad behavior is in fact just curious behavior. Toddlerdom is the age of individuation, seeking control, and above all, learning how the world works. But this misunderstanding between parents and child can lead to power struggles, tantrums, and even diminished growth and creativity. The recent push of early intellectualism coupled with a desire to “make childhood magical” has created a strange paradox—we have three-year-olds with math and Mandarin tutors who don’t know how to dress themselves and are sitting in their own poop. We are pushing the toddler mind beyond its limit but simultaneously keeping them far below their own natural capabilities. In the frank, funny, and totally authentic *Oh Crap! "The drawings aren't very good, Mama." —Crappy Boy, age 5 Of course you love being a parent. But sometimes, it just sucks. I know. I'm Amber Dusick and I started my blog Parenting: Illustrated with Crappy Pictures because I needed a place to vent about the funny (and frustrating) day-to-day things that happened to me as a parent. Turns out, poop is hilarious! At least when you're not the one wiping it up. This book won't make your frustrating moments any less crappy. But these stories about my Crappy Baby, Crappy Boy and my husband, Crappy Papa, will hopefully make you laugh. Because you're not

alone. And sometimes the crappiest moments make the best memories. Parenting is wonderful! And also, well, you know.

? Do you want to learn simple tips and tricks to make your child feel comfortable on the potty.? If yes, then keep reading...? Potty training seems to be a rite of passage for parents. And every parent who has successfully potty trained their child will have some sort of input about what you should do. The thing is, there really isn't a one-size-fits-all approach to potty training because it largely depends on your child. Parents tend to have the hardest time potty training when they tried to force it on their child before their child is actually ready to use the potty. This can be hard for parents, especially if they are friends with people who have young children who started using the potty at an earlier age. The problem is, if you try to force your child to use the potty when you think they should, it is only going to slow down the entire process. You could also run this risk of making them scared of the potty, so it's best to listen and pay attention to your child and know that they will learn when they are emotionally and physically ready to. You can't deny that allure of being able to get your little one out of all of those diapers in only three days. When it does work, the benefits are high. If you prefer disposable diapers, then you are going to save a bunch of money and help the landfill. If you chose to use cloth diapers, you aren't going to have to be doing as much laundry. Plus, you aren't going to have to wrestle your child anymore to change their diaper because, let's be honest, they have outgrown the changing table. No more power

From the author of *Expecting Better* and *The Family Firm*, an economist's guide to the early years of parenting. "Both refreshing and useful. With so many parenting theories driving us all a bit batty, this is the type of book that we need to help calm things down." —LA Times "The book is jam-packed with information, but it's also a delightful read because Oster is such a good writer." —NPR With *Expecting Better*, award-winning economist Emily Oster spotted a need in the pregnancy market for advice that gave women the information they needed to make the best decision for their own pregnancies. By digging into the data, Oster found that much of the conventional pregnancy wisdom was wrong. In *Cribsheet*, she now tackles an even greater challenge: decision-making in the early years of parenting. As any new parent knows, there is an abundance of often-conflicting advice hurled at you from doctors, family,

friends, and strangers on the internet. From the earliest days, parents get the message that they must make certain choices around feeding, sleep, and schedule or all will be lost. There's a rule—or three—for everything. But the benefits of these choices can be overstated, and the trade-offs can be profound. How do you make your own best decision? Armed with the data, Oster finds that the conventional wisdom doesn't always hold up. She debunks myths around breastfeeding (not a panacea), sleep training (not so bad!), potty training (wait until they're ready or possibly bribe with M&Ms), language acquisition (early talkers aren't necessarily geniuses), and many other topics. She also shows parents how to think through freighted questions like if and how to go back to work, how to think about toddler discipline, and how to have a relationship and parent at the same time. Economics is the science of decision-making, and Cribsheet is a thinking parent's guide to the chaos and frequent misinformation of the early years. Emily Oster is a trained expert—and mom of two—who can empower us to make better, less fraught decisions—and stay sane in the years before preschool.
