Accounting education is undergoing a thorough review on a worldwide basis and major developments are taking place to produce quality accounting education that can keep pace with dramatic world change. This book provides an up-to-date view of the state of accounting education throughout the world and focusses on the global challenges facing accounting education as we approach the millenium.

Underlying this book, first published in 1988, is the belief that it is insightful to examine accounting not as merely a technical process, nor as a technical process with social and political consequences, but as an activity which is both social and political in itself. One way of illuminating the social nature of accounting is through studying its cultural variations, for although accounting is a feature of modern industrial society the extent of its use varies across cultures. This book examines the history of accounting and explores the complicated relationship between accounting and society.
