The Rise of Professional Society lays out a stimulating and controversial framework for the study of British society, challenging accepted paradigms based on class analysis. Perkins argues that the non-capitalist "professional class" represents a new principle of social organization based on trained expertise and meritocracy, a "forgotten middle class" conveniently overlooked by classical social theorists.

This book explores the relevance of David Bowie's life and music for contemporary legal and cultural theory. Focusing on the artist and artworks of David Bowie, this book brings to life, in essay form, particular theoretical ideas, creative methodologies and ethical debates that have contemporary relevance within the fields of law, social theory, ethics and art. What unites the essays presented here is that they all point to a beyond law: to the fact that law is not enough, or to be more precise, too much, too much to bear. For those who, like Bowie, see art, creativity and love as what ought to be the central organising principles of life, law will not do. In the face of its certainties, its rigidities, and its conceits, these essays, through Bowie, call forth the monster who laughs at the law, celebrate inauthenticity as a deeper truth, explore the ethical limits of art, cut up the laws of writing and embrace that which is most antithetical to law, love. This original engagement with the limits of law will appeal to those working in legal theory, ethics and law and popular culture, as well as in art and cultural

studies.

Soil Mechanics Lab Manual prepares readers to enter the field with a collection of the most common soil mechanics tests. Laboratory exercises and data sheets for each test are included in the Soil Mechanics Lab Manual.

An authorised reissue of the long out of print classic textbook, *Advanced Calculus* by the late Dr Lynn Loomis and Dr Shlomo Sternberg both of Harvard University has been a revered but hard to find textbook for the advanced calculus course for decades. This book is based on an honors course in advanced calculus that the authors gave in the 1960's. The foundational material, presented in the unstarred sections of Chapters 1 through 11, was normally covered, but different applications of this basic material were stressed from year to year, and the book therefore contains more material than was covered in any one year. It can accordingly be used (with omissions) as a text for a year's course in advanced calculus, or as a text for a three-semester introduction to analysis. The prerequisites are a good grounding in the calculus of one variable from a mathematically rigorous point of view, together with some acquaintance with linear algebra. The reader should be familiar with limit and continuity type arguments and have a certain amount of mathematical sophistication. As possible introductory texts, we mention *Differential and Integral Calculus* by R Courant, *Calculus* by T Apostol, *Calculus* by M Spivak, and *Pure Mathematics* by G Hardy. The reader should also have some experience with partial derivatives. In overall plan the book divides roughly into a first half which develops the calculus (principally the differential calculus) in the setting of normed vector spaces, and a second half which deals with the calculus of differentiable manifolds.

Geotechnical Engineering: A Practical Problem Solving Approach covers all of the major geotechnical topics in the simplest possible way adopting a hands-on approach with a very strong practical bias. You will learn the material through worked examples that are representative of realistic field situations whereby geotechnical engineering principles are applied to solve real-life problems. *CBT for Long-Term Conditions and Medically Unexplained Symptoms* describes how cognitive behavioural therapy (CBT) can be used to treat anxiety and depression with a co-morbid long-term physical health condition (LTC) or medically unexplained symptoms (MUS). The book teaches cognitive behavioural therapists and other clinicians to help patients deal with the psychological aspects of physical symptoms, whatever their cause. It is divided into three parts, beginning with core skills for working with people with LTC and MUS. This includes assessment, formulation and goal setting. Part II focuses on CBT for

LTC and includes chapters on low intensity interventions, working with depression and anxiety using protocols, and a consideration of an identity and strengths-based approach to working with LTC. The final part provides details of a formulation driven approach to working with MUS, broken down into individual chapters on working with behaviours, cognitions and emotions. With numerous case examples, the book provides accessible and practical guidance for mental health professionals, particularly CBT practitioners, working with anyone with long-term conditions or MUS.
