As an industrial process, construction is unique. The procurement processes used to achieve the

successful completion of built assets requires a different approach to that adopted in most other industries, due to the design of buildings being bespoke and the sites being geographically varied. The procurement process is central to the success of any construction project and many of the problems which impact construction projects can be traced back to the procurement phase, so a good understanding of the methods of procurement, the development of a procurement strategy and the influence it has on project success is essential for all those working in the industry. Much has changed in the global construction industry since publication of the second edition of Building Procurement, for example the increase in debt burden of many major economies, widespread adoption of Building Information Modelling (BIM) Technology in the industry and the United Kingdom's exit from the European Union. This new edition has been rewritten to take account of these significant developments, but at its core it continues to provide a critical examination and review of current procurement practices in the UK, continental Europe (including EU procurement procedures), China, Middle East and Sub-Saharan Africa and the USA. It retains its original strong emphasis on the need for clients to establish achievable objectives which reflect the project business case and focuses on development of suitable strategies and management

Procurement Systems details the whole spectrum of procurement issues in the construction industry, starting with the client /customer and running through managerial, cultural and IT-based issues. The book commences with an overview of previous work and a section on selection criteria is provided to enable practitioners to make their choices of procurement form. Importantly, performance comparisons of different procurement forms are discussed and the main emphasis of the book is to highlight best practice based on the most up-to-date research. One chapter deals specifically with developmentally orientated procurement issues in NICs (newly industrialised countries), where best practice is assessed from a different set of perspectives. The authors contributing to this book are among the most highly respected and eminent in the field.

In the e-world it is the B2B marketplace. And in the B2B marketplace, the hottest thing--and the thing most likely to turn companies a profit--is e-procurement. Increasingly, top executives view supply markets as sources of competitive advantage and as means of achieving strategic objectives. Procurement is the management activity that makes this happen, and this process depends on a superior risk management capability if it is to be effective. Yet, despite its importance, Procurement Risk Management is surprisingly under-developed. Recent Global Risk surveys have pinpointed Supply Chain Vulnerability as one of the four key global risks for the next decade. What is less well known is that this is only half of the story ... risk exposures also exist inside the company and can be just as damaging. No company is an island; it needs suppliers as well as customers. Conventional wisdom puts great emphasis on managing certain aspects of business such as customers; operations; strategy and finances. Typically, however, much less regard is paid to external suppliers and the risks present in dealing with them. As a minimum, suppliers are the sources of materials, services and expert attention which enable the company to feed its business model. When done well, a risk-aware procurement process provides the bonus of competitive advantage, with the ability to capitalise, on the

This book presents the results of a three-year research project based at the Ruhr-University Bochum, financed by the Fritz Thyssen Foundation, Cologne. Corruption in public procurement is widespread and particularly damaging to development objectives, as it undermines any state's duty to maximize the social and economic welfare of its citizens. Yet, research on country-specific regulation meant to address this problem has remained scarce. This book aims to fill this gap by providing a systematic comparative analysis of supplier remedies mechanisms in Kenya, Uganda and Tanzania. It elaborates on the potential of legal remedies to serve as anticorruption tools. Based on the fact that the anti-corruption effect of remedies mechanisms depends ultimately on the actual use by suppliers, three main factors are discussed: (1) the institutional setting and independence of the remedies systems; (2) their accessibility for aggrieved bidders; and (3) their efficiency, driven by bidder's cost-benefit analysis and including the aspects of procedural fees, duration, available relief and prospects of success. The assessment of the legislation is complemented by information gained from various stakeholders such as public procurement authorities, development organizations, NGOs and scientific experts. Despite many similarities of the systems due to their common historical background, the analysis identifies remarkably

different regulative and institutional approaches, and discusses their more or less supportive effects on the use of supplier remedies mechanisms.

"This book ... adds to the impressive 'legacy' of learning which is still emerging from the successful delivery of the London 2012 construction programme. The authors combine the reforming zeal of a champion for change, who was there every step of the way, with academic rigour, and the result is delivered with impressive passion and commitment to the topic ... All spenders and suppliers need to read this, to understand how conventional understandings of procurement fall so dramatically short when applied to high value-high risk acquisitions, which invariably is what large construction projects represent." —Don Ward, Chief Executive,

Constructing Excellence, UK Successful construction is often attributed to one or more aspects of the delivery process from good planning, design and clever engineering to efficient project management and quality construction. Before any of these disciplines can begin, they all require some form of procurement to select the team or supply chain to meet a client's or a project's specific requirements. The concept of PSE - Purchase and Supplier Engineering - originated in the procurement of the construction and infrastructure required to stage the 30th Olympiad in London during 2012. At the time of writing PSE has successfully delivered almost £25bn of public procurement meeting client and project requirements and without legal challenge. The construction of the venues and infrastructure needed to stage London 2012 was such a resounding success that it boosted not only the reputation of the UK construction industry but also the confidence of the UK population in the country's ability to organise, build and run a major international event. Its success has been lauded as something from which clients and industry could learn. The ODA has established a comprehensive and informative body

of evidence as part of a Learning Legacy. While the ODA is well aware of the many elements of the procurement and supply chain management, the complete end to end concept of how the Olympic supply chain procurements were managed has until now not been captured. For example, how does one buy the stage for an Olympic Games? How does one manage the details of thousands of contracts and the many firms of contractors, subcontractors and material suppliers and ensure that no one organisation adversely affects any other to the detriment of the programme? How are a client's requirements beyond those of the capital asset realised as part of the investment? How does one measure programme exposure, or manage performance? How does one measure capacity and the ability of firms to cope with the work and manage the risks involved? Programme Procurement in Construction: Learning from London 2012 covers the planning and preparation of a programme's procurement processes from understanding and developing the client's requirements, to monitoring performance based on the benchmarks contractors set out in their own tender submissions. The emphasis is on a close attention to detail to avoid surprises, while keeping a focus on the total programme. Purchase and Supplier Engineering provides an overview of managing the interest of firms in participating and the resulting capacity and workloads of all suppliers, including the main contractors and the critical subcontractors and material suppliers. Offering techniques, tips and lessons learnt from the implementation of PSE on London 2012 and Crossrail, this book is aimed at public and private sector clients, developers, senior management and those businesses and professionals involved in undertaking the procurement, supply chain management and delivery of multiple construction projects or complex major construction programmes.
