Program Evaluation and Performance Measurement offers a conceptual and practical introduction to program evaluation and performance measurement for public and non-profit organizations. James C. McDavid, Irene Huse, and Laura R.L. Hawthorn discuss topics in a detailed fashion, making it a useful guide for practitioners who are constructing and implementing performance measurement systems, as well as for students. Woven into the chapters is the performance management cycle in organizations, which includes: strategic planning and resource allocation; program and policy design; implementation and management; and the assessment and reporting of results. The Third Edition has been revised to highlight and integrate the current economic, political, and socio-demographic context within which evaluators are expected to work, and includes new exemplars including the evaluation of body-worn police cameras.

This book provides a self-contained presentation of the statistical tools required for evaluating public programs, as advocated by many governments, the World Bank, the European Union, and the Organization for Economic Cooperation and Development. After introducing the methodological framework of program evaluation, the first chapters are devoted to the collection, elementary description and multivariate analysis of data as well as the estimation of welfare changes. The book then successively presents the tools of ex-ante methods (financial analysis, budget planning, cost-benefit, cost-effectiveness and multi-criteria evaluation) and ex-post methods (benchmarking, experimental and quasi-experimental evaluation). The step-by-step approach and the systematic use of numerical illustrations equip readers to handle the statistics of program evaluation. It not only offers practitioners from public administrations, consultancy firms and nongovernmental organizations the basic tools and advanced techniques used in program assessment, it is also suitable for executive management training, upper undergraduate and graduate courses, as well as for self-study.

In 'Giving Aid Effectively', Mark T. Buntaine argues that countries that are members of international organizations have prompted multilateral development banks to give development and environmental aid more effectively by generating better information about performance.

Evaluating Research in Academic Journals is a guide for students who are learning how to evaluate reports of empirical research published in academic journals. It breaks down the process of evaluating a journal article into easy-to-understand steps, and emphasizes the practical aspects of evaluating research – not just how to apply a list of technical terms from textbooks. The book avoids oversimplification in the evaluation process by describing the nuances that may make an article publishable even when it has serious methodological flaws. Students learn when and why certain types of flaws may be tolerated, and why evaluation should not be performed mechanically. Each chapter is organized around evaluation questions. For each question, there is a concise explanation of how to apply it in the evaluation of research reports. Numerous examples from journals in the social and behavioral sciences illustrate the application of the evaluation questions, and demonstrate actual examples of strong and weak features of published reports. Common-sense models for evaluation combined with a lack of jargon make it possible for students to start evaluating research articles the first week of class. New to this edition New chapters on: evaluating mixed methods

Contains an inventory of evaluation reports produced by and for selected Federal agencies, including GAO evaluation reports that relate to the programs of those agencies.

This text provides a solid foundation in program evaluation, covering the main components of evaluating agencies and their programs, how best to address those components, and the procedures to follow when conducting evaluations. Different models and approaches are paired with practical techniques, such as how to plan an interview to collect qualitative data and how to use statistical analyses to report results. In every chapter, case studies provide real world examples of evaluations broken down into the main elements of program evaluation: the needs that led to the program, the implementation of program plans, the people connected to the program, unexpected side effects, the role of evaluators in improving programs, the results, and the factors behind the results. In addition, the story of one of the evaluators involved in each case study is presented to show the human side of evaluation. This new edition also offers enhanced and expanded case studies, making them a central organizing theme, and adds more international examples. New online resources for this edition include a table of evaluation models, examples of program evaluation reports, sample handouts for presentations to stakeholders, links to YouTube videos and additional annotated resources. and evidence-based practice to criminal justice reform plans. Unlike other policy-based texts, which tend to focus more on implementation than assessment, this book provides applicable, step-by-step instruction on determining an initiative's necessity prior to its adoption (reducing the risk of wasting resources), as well as how to accurately gauge its effectiveness during initial roll-out stages. The book gradually introduces basic data analysis procedures and statistical techniques, which, once mastered, can be used to prove or disprove a program's worth. Lastly, the book introduces the types of stakeholders who should review evaluation results for quick action, as well as how to best structure reports to ensure their buy-in. Individually examines every major evaluation type (as well as the benefits, concerns, and constraints of each), including needs, theory, process, outcome/impact, and cost efficiency Defines the precise data points each evaluation type requires, and the exact manner in which this data can be collected Demonstrates how different types of evaluations can be used together to provide clear information regarding a program's overall performance level Cites and makes use of real-world policy evaluations and vetted programs

The leading text that covers both the theory and practice of evaluation in one engaging volume has now been revised and updated with additional evaluation approaches (such as mixed methods and principles-focused evaluation) and new methods (such as technologically based strategies). The book features examples of small- and large-scale evaluations from a range of fields, many with reflective commentary from the evaluators; helpful checklists; and carefully crafted learning activities. Major theoretical paradigms in evaluation--and the ways they inform methodological choices--are explained. Readers learn effective strategies for clarifying their own theoretical assumptions; working with stakeholders; developing questions; using quantitative, qualitative, and mixed methods designs; selecting data collection and sampling strategies; analyzing data; and communicating and utilizing findings. The new companion website provides extensive recommended online resources and tools, organized by chapter. New to This Edition

- *Additional evaluation approaches: collaborative evaluation, principles-focused evaluation, and desk reviews.
- *Coverage of new data collection technologies and methods of qualitative coding.
- *Expanded discussions of logic models, cost-benefit analysis, and mixed methods designs.
- *Many new and updated sample studies.

Pedagogical Features

- *Reflection questions that prepare students to read each chapter.
