

Project Prioritization Capital Improvements Program

Committee Serial No. 87-19. Considers legislation to establish an Office of Public Works Coordination and Acceleration to authorize the acceleration of Federal, state, and local public works and capital expenditure programs during times of recession and high unemployment. The entire planning process for new school buildings and renovation projects is presented in this book.

Identifies and describes specific government assistance opportunities such as loans, grants, counseling, and procurement contracts available under many agencies and programs.

Too often capital improvement programming is ignored or dismissed as superfluous. But it is an integral part of the functioning of the economy. Without it, all services would eventually decay until they were no longer useful. Bowyer argues that capital improvement programs (CIPs) are an important part of the planning process and should be a part of the budgeting system rather than merely advisory. He uses the experiences of his many years of planning in cities of varying sizes to illustrate the links between budgeting and planning. His tips show planners how they can succeed in implementing their CIP. Bowyer peppers his examples with personal anecdotes, making a subject that could be dry very interesting.

Capital budgeting and debt administration, when pursued from a strategic planning perspective as opposed to the more conventional cost-based framework, provides a forward-looking alternative based on a jurisdiction's needs, its resource base, and growth potential.

Managing Local Government Services, 3rd ed. is a comprehensive text on the subject of local government services relevant to local governments of all sizes. This edition is refocused and updated to include the demographic, economic, technology and cultural trends that affect the management of service delivery. New chapters discuss the shift from *government* to *governance*, alternative methods of service delivery, community development, and the five management practices that are fast becoming the standard for professional local government management. Each chapter lays out the manager's responsibilities in each service area, and provides effective policies, practices, and procedures. Short case examples give you a practical look at the goals, challenges, and solutions in the manager's world.

Managing Local Government Services A Practical Guide | CMA Press

The Basics of Public Budgeting and Financial Management brings budgetary theory and practice together, filling the void between the two that has existed in the field of budgeting and public finance. This book bridges the gap by providing students with applications and exercises that reinforce budgetary theory. These exercises are the key to ensuring that students leave the classroom with knowledge and marketable skills. Specifically, students will be exposed to basic budget and finance concepts, but more importantly they will complete assignments where they apply the information in various settings. For example: creating tax structures, conducting a financial management plan, risk assessments, cost benefit analysis, and so on. This handbook also shows students how to best utilize tools that allow them to visually display budgets and other budgetary data. Students will gain the solid foundation needed to begin work in a budget office. While the original purpose of the book is the same, the third edition of the book provides a few new thematic sections as well as homework questions and classroom

assignments that reinforce the topical areas. The ancillary materials make the process very easy for an instructor to organize their lectures around thematic areas. The book is a must read for instructor's who are considering a course that introduces students to budgeting and finance and those who want student's to learn the basic components of budgeting and financial management.

Urban and regional planning programs aspire to prepare practitioners to write and implement plans, primarily at the local level of government. These programs are very much "professional" in their aspirations, as opposed to research oriented. Yet, academic planning programs often place greater emphasis on theory than practice. For decades, the planning academy has acknowledged a major disconnect between what the planning academy teaches students and the techniques and skills needed to be a successful professional practitioner. Fundamentals of Plan Making will give planning students an understanding of research design as it applies to planning, develop familiarity with various data sources, and help them acquire knowledge and the ability to conduct basic planning analyses such as population projections, housing needs assessments, development impact analyses, and land use plans. Students will also learn how to implement the various citizen participation methods used by planners and develop an appreciation of the values and roles of practicing planners. In Fundamentals of Plan Making, Edward Jepson and Jerry Weitz bring their extensive experience as practicing academics and give planning students the practical, hands on tools they need to implement the various methods used to create and implement real plans and policies. Its chapters on transportation, housing, environment, economic development and other core development topics also make it a handy reference for planning practitioners.
