ANA and the American College of Cardiology Foundation convened an array of cardiovascular health experts to develop this succinct and practical guide. This completely updated document is unique, in fact, as a unifying effort due to participation and contribution of 16 nursing organizations whose constituency includes cardiovascular nurses. Reflecting the cumulative work of three previous iterations (and including their content), this book is a foundational volume. It articulates the essentials of the specialty, its accountabilities and activities - the who, what, when, where, and how of its practice - for both specialists and generalists. The standards themselves - six for nursing practice and nine for nursing professional performance - are those by which all nurses in this specialty practice. Together, along with each standard's set of measurement criteria, these reflect the perspectives and priorities of cardiovascular nursing. The book's summary discussion of the scope of such practice - its characteristics, development and trends, education and training, its practice environments and settings, its general and specialized practice roles, its ethical and conceptual bases - lends a broad context for understanding and using these standards. While *Cardiovascular Nursing: Scope and Standards of Practice* is a reference and guide primarily for practicing nurses and nursing faculty and students, it is also an essential source document for other cardiovascular specialists, healthcare providers, researchers, and scholars, along with those involved in funding, legal, policy, and regulatory activities.

Prepare for success on respiratory therapy credentialing exams! Updated to reflect the 2009 National Board of Respiratory Care (NBRC) content outlines, *Sills' The Comprehensive Respiratory Therapist's Exam Review, 5th Edition* helps you review for both entry and advanced level credentialing exams. It covers every testable subject, providing content review, self-assessment questions, and study hints. This title includes additional digital media when purchased in print format. For this digital book edition, media content is not included. Unique! Exam Hint boxes point out subjects that are frequently tested, helping you study, plan your time, and improve your test-taking skills. Self-study questions are included at the end of each chapter, accompanied by answers and rationales in the back of the book. Complexity level codes (recall, application, and analysis) help you prepare for questions in the way that is most appropriate (e.g., memorization for recall or synthesis for analysis). NBRC content outline coding provides a code for each topic so you can be sure that you have covered every topic that might appear on the exam. CRT and RRT level codes speed your review by identifying the individual topics for the CRT and RRT exams, as well as topics for both. One text now covers both the entry and advanced levels of Respiratory Therapists credentialing exams, so you need only one book to prepare for CRT and RRT credentials. Updated content reflects the NBRC's new examination content outlines, so you get an accurate, current review. New coverage includes subject areas such as CPAP/BiPAP titration during sleep, hemodynamic monitoring, hyperinflation therapy, laryngeal mask airway, high frequency ventilation, oxygen titration, thoracentesis, ultrasound, and ventilator-associated pneumonia protocols.

"This splendid work of scholarship . . . sums up with economy and power all that the written record so far deciphered has to tell about the ancient and complementary civilizations of Babylon and Assyria."—Edward B. Garside, *New York Times Book Review Ancient Mesopotamia*—the area now called Iraq—has received less attention than ancient Egypt and other long-extinct and more spectacular civilizations. But numerous small clay tablets buried in the desert soil for thousands of years make it possible for us to know more about the people of ancient Mesopotamia than any other land in the early Near East. Professor Oppenheim, who studied these tablets for more than thirty years, used his intimate knowledge of long-dead languages to put together a distinctively personal picture of the Mesopotamians of some three thousand years ago. Following Oppenheim's death, Erica Reiner used the author's outline to complete the revisions he had begun. "To any serious student of Mesopotamian civilization, this is one of the most valuable books ever written."—Leonard Cottrell, *Book Week* "Leo Oppenheim has made a bold, brave, pioneering attempt to present a synthesis of the vast mass of philological and archaeological data that have accumulated over the past hundred years in the field of Assyriological research."—Samuel Noah Kramer, *Archaeology A. Leo Oppenheim, one of the most distinguished Assyriologists of our time, was editor in charge of the Assyrian Dictionary of the Oriental Institute and John A. Wilson Professor of Oriental Studies at the University of Chicago.*

One of the earliest sources of humanity's religious impulse was severe weather, which ancient peoples attributed to the wrath of storm gods. Enlightenment thinkers derided such beliefs as superstition and predicted they would pass away as humans became more scientifically and theologically sophisticated. But in America, scientific and theological hubris came face-to-face with the tornado, nature's most violent windstorm. Striking the United States more than any other nation, tornadoes have consistently defied scientists' efforts to unlock their secrets. Meteorologists now acknowledge that even the most powerful computers will likely never be able to predict a tornado's precise path. Similarly, tornadoes have repeatedly brought Americans to the outer limits of theology, drawing them into the vortex of such mysteries as how to reconcile suffering with a loving God and whether there is underlying purpose or randomness in the universe. In this groundbreaking history, Peter Thuesen captures the harrowing drama of tornadoes, as clergy, theologians, meteorologists, and ordinary citizens struggle to make sense of these death-dealing tempests. He argues that, in the tornado, Americans experience something that is at once culturally peculiar (the indigenous storm of the national imagination) and religiously primal (the sense of awe before an unpredictable and mysterious power). He also shows that, in an era of climate change, the weather raises the issue of society's complicity in natural disasters. In the whirlwind, Americans confront the question of their own destiny—how much is self-determined and how much is beyond human understanding or control.

Modernizing Learning: Building the Future Learning Ecosystem is an implementation blueprint for connecting learning experiences across time and space. This co-created plan represents an advancement of how and where learning will occur in the future. Extensive learning and technological research has been conducted across the myriad disciplines and communities needed to develop this holistic maturation of the learning continuum. These advancements have created the opportunity for formal and informal learning experiences to be accessible

anywhere, anytime, and to be personalized to individual needs. However, for full implementation and maximal benefits for learners of all ages and within all communities to be achieved, it is necessary to centralize and coordinate the required connections across technology, learning science, and the greater supporting structures. Accordingly, the ADL Initiative has taken the lead in this coordination process, connecting Government, Military, Academia, Industry, and K-12 teachers, instructors, technologists, researchers, and implementers to create and execute a coordinated transition process. Input was included from stakeholders, communities, and supporting entities which will be involved in this advancement of the life-long learning ecosystem.

This book illustrates, in a comprehensive manner, the most crucial principles involved in pharmacology and allied sciences. The title begins by discussing the historical aspects of drug discovery, with up to date knowledge on Nobel Laureates in pharmacology and their significant discoveries. It then examines the general pharmacological principles - pharmacokinetics and pharmacodynamics, with in-depth information on drug transporters and interactions. In the remaining chapters, the book covers a definitive collection of topics containing essential information on the basic principles of pharmacology and how they are employed for the treatment of diseases. Readers will learn about special topics in pharmacology that are hard to find elsewhere, including issues related to environmental toxicology and the latest information on drug poisoning and treatment, analytical toxicology, toxicovigilance, and the use of molecular biology techniques in pharmacology. The book offers a valuable resource for researchers in the fields of pharmacology and toxicology, as well as students pursuing a degree in or with an interest in pharmacology.

Discovering Addiction brings the history of human and animal experimentation in addiction science into the present with a wealth of archival research and dozens of oral-history interviews with addiction researchers. Professor Campbell examines the birth of addiction science---the National Academy of Sciences's project to find a pharmacological fix for narcotics addiction in the late 1930s---and then explores the human and primate experimentation involved in the succeeding studies of the "opium problem," revealing how addiction science became "brain science" by the 1990s. Psychoactive drugs have always had multiple personalities---some cause social problems; others solve them---and the study of these drugs involves similar contradictions. Discovering Addiction enriches discussions of bioethics by exploring controversial topics, including the federal prison research that took place in the 1970s---a still unresolved debate that continues to divide the research community---and the effect of new rules regarding informed consent and the calculus of risk and benefit. This fascinating volume is both an informative history and a thought-provoking guide that asks whether it is possible to differentiate between ethical and unethical research by looking closely at how science is made. Nancy D. Campbell is Associate Professor of Science and Technology Studies at Rensselaer Polytechnic Institute and the author of Using Women: Gender, Drug Policy, and Social Justice. "Compelling and original, lively and engaging---Discovering Addiction opens up new ways of thinking about drug policy as well as the historical discourses of addiction." ---Carol Stabile, University of Wisconsin--Milwaukee Also available: Student Bodies: The Influence of Student Health Services in American Society and Medicine, by Heather Munro Prescott Illness and the Limits of Expression, by Kathlyn Conway White Coat, Clenched Fist: The Political Education of an American Physician, by Fitzhugh Mullan

"For too many traumatized children and their families, chronic stressors such as poverty, substance abuse, and family or community violence--coupled with an overburdened care system/m-/pose seemingly insurmountable barriers to treatment. This empowering book provides a user-friendly blueprint for making the most of limited resources to help those considered the "toughest cases." Evidence-based strategies are presented for effectively integrating individualized treatment with services at the home, school, and community levels. Written in an accessible, modular format with reproducible forms and step-by-step guidelines for assessment and intervention, the approach is grounded in the latest knowledge about child traumatic stress. It has been recognized as a treatment of choice by state mental health agencies nationwide"--

This book demonstrates how to successfully manage and lead healthcare institutions by employing the logic of business model innovation to gain competitive advantages. Since clerk-like routines in professional organizations tend to overlook patient and service-centered healthcare solutions, it challenges the view that competition and collaboration in the healthcare sector should not only incorporate single-end services, therapies or diagnosis related groups. Moreover, the authors focus on holistic business models, which place greater emphasis on customer needs and put customers and patients first. The holistic business models approach addresses topics such as business operations, competitiveness, strategic business objectives, opportunities and threats, critical success factors and key performance indicators. The contributions cover various aspects of service business innovation such as reconfiguring the hospital business model in healthcare delivery, essential characteristics of service business model innovation in healthcare, guided business modeling and analysis for business

professionals, patient-driven service delivery models in healthcare, and continuous and co-creative business model creation. All of the contributions introduce business models and strategies, process innovations, and toolkits that can be applied at the managerial level, ensuring the book will be of interest to healthcare professionals, hospital managers and consultants, as well as scholars, whose focus is on improving value-generating and competitive business architectures in the healthcare sector.

While we may expect to live longer, many wonder if their brains will keep up with their bodies. This book looks at typical functions and declines of an aging brain, the signs and symptoms of problems, the available treatments, the financial responsibilities, and the factors that determine what kinds of care people might need as they age.

The development of science in the modern world is often held to depend on such institutions as universities, peer-

reviewed journals, and democracy. How, then, did new science emerge in the pre-modern culture of the Hellenistic Egyptian monarchy? Berrey argues that the court society formed around the Ptolemaic pharaohs Ptolemy III and IV (reigned successively 246-205/4 BCE) provided an audience for cross-disciplinary, learned knowledge, as physicians, mathematicians, and mechanics clothed themselves in the virtues of courtiers attendant on the kings. The multicultural Greco-Egyptian court society prized entertainment that drew on earlier literature, mixed genres and cultures, and highlighted motion and sound. New cross-disciplinary science in the Hellenistic period gained its social currency and subsequent scientific success through its entertainment value as court science. Ancient court science sheds light on the long history of scientific interdisciplinarity.

Dynamic assessment embeds interaction within the framework of a test-intervene-retest approach to psychoeducational assessment. This book offers an introduction to diagnostic assessors in psychology, education, and speech/language pathology to the basic ideas, principles, and practices of dynamic assessment. Most importantly, the book presents an array of specific procedures developed and used by the authors that can be applied to clients of all ages in both clinical and educational settings. The authors discuss their approach to report-writing, with a number of examples to demonstrate how they incorporate dynamic assessment into a comprehensive approach to assessment. The text concludes with a discussion of issues and questions that need to be considered and addressed. Two appendixes include descriptions of additional tests used by the authors that are adapted for dynamic assessment, as well as information about dynamic assessment procedures developed by others and sources for additional information about this approach.

This highly original work presents laboratory science in a deliberately skeptical way: as an anthropological approach to the culture of the scientist. Drawing on recent work in literary criticism, the authors study how the social world of the laboratory produces papers and other "texts," and how the scientific vision of reality becomes that set of statements considered, for the time being, too expensive to change. The book is based on field work done by Bruno Latour in Roger Guillemin's laboratory at the Salk Institute and provides an important link between the sociology of modern sciences and laboratory studies in the history of science.

"It does an excellent job of reviewing the relevant content, with good thought-provoking questions. It is followed by NCLEX style questions and rationales. The book is thorough and current... The author does a very good job of covering important critical care
