Life Span Motor Development, Seventh Edition With Web Study Guide, is a leading text for helping students examine and understand how interactions of the developing and maturing individual, the environment, and the task being performed bring about changes in a person's movements. This model of constraints approach, combined with an unprecedented collection of video clips marking motor development milestones, facilitates an unmatched learning experience for the study of motor development across the life span. The seventh edition expands the tradition of making the student's experience with motor development an interactive one. An improved web study guide retains more than 100 video clips to sharpen observation techniques, while incorporating additional interactive questions and lab activities to facilitate critical thinking and hands-on application. The text also contains several updates to keep pace with the changing field: Content related to physical growth and development of the skeletal, muscle, and adipose systems is reorganized chronologically for a more logical progression. New material on developmental motor learning demonstrates the overlap between the disciplines of motor development and motor learning. New insights into motor competence help explain the relationship between skill development and physical fitness. The text helps students understand how maturational age and chronological age are distinct and how functional constraints affect motor skill development and

learning. It shows how the four components of physical fitness—cardiorespiratory endurance, strength, flexibility, and body composition—interact to affect a person’s movements over the life span, and describes how relevant social, cultural, psychosocial, and cognitive influences can affect a person’s movements. This edition comes with 148 illustrations, 60 photos, and 25 tables—all in full color—to help explain concepts and to make the text more engaging for students. It also retains helpful learning aids including chapter objectives, a running glossary, key points, sidebars, and application questions throughout each chapter. The enhancements to the seventh edition don’t end with revised content in the text. Instructors adopting the text for use in their course will find an updated ancillary package. The authors have revised the test package, and the instructor guide now includes feedback and answers to lab questions and “Test Your Knowledge” questions that appear throughout the book. In addition, the video clips that students view through the web study guide are available in separate files so they can be uploaded into learning management systems or PowerPoint presentations. Life Span Motor Development, Seventh Edition, embraces an interactive and practical approach to illustrate the most recent research in motor development. Students will come away with a firm understanding of the concepts and how they apply to real-world situations.

Balanced coverage of the entire life span is just one thing that distinguishes HUMAN DEVELOPMENT: A LIFE-SPAN VIEW, Seventh Edition. With its comprehensive,

succinct, and applied coverage, the text has proven its ability to capture students' interest while introducing them to the issues, forces, and outcomes that make us who we are. Robert V. Kail's expertise in childhood and adolescence, combined with John C. Cavanaugh's extensive research in gerontology, result in a book with a rich description of all life-span stages and important topics. A modified chronological approach traces development in sequential order from conception through late life, while also dedicating several chapters to key topical issues. This organization also allows the book to be relatively briefer than other texts, a benefit given the enormous amount of information covered in the course. The authors provide theoretical and empirical foundations that enable students to become educated, critical interpreters of developmental information. A blend of basic and applied research, as well as coverage of controversial topics and emergent trends, demonstrates connections between the laboratory and life. This volume continues to examine these questions and to report advances in empirical research within life-span development increasing its interdisciplinary nature. The relationships between individual development, social context, and historical change are salient issues discussed in this volume, as are nonnormative and atypical events contributing to life-span change.
