A subject-specific guide for teachers to supplement professional development and provide resources for lesson planning. Approaches to learning and teaching Science is the result of close collaboration between Cambridge University Press and Cambridge International Examinations. Considering the local and global contexts when planning and teaching an international syllabus, the title presents ideas for Science with practical examples that help put theory into context. Teachers can download online tools for lesson planning from our website. This book is ideal support for those studying professional development qualifications or international PGCEs.

This textbook follows closely the latest syllabus issued by the Ministry of Education, Singapore. It emphasises the understanding of mathematical concepts using a clear and systematic approach.

The first book to explore the development of Singapore's much-talked-about education and examination system, this volume juxtaposes examinations with its immediate context of education and wider context of politics, economy and society. The study covers three broad historical periods: Examinations in Singapore from 1891 to 1945; The Post-War Years from 1946 to the 1970s; and Charting Our Destiny from the 1980s to 2007. In the British period up to 1941, the

local examinations were conducted by the vernacular schools, and external examinations by the University of Cambridge Local Examinations Syndicate. There was a lack of systematic effort to establish a uniform system of education and examinations. During the Japanese Occupation, examinations were conducted by the Japanese authorities and, unexpectedly, the Cambridge examinations continued in the Sime Road Camp. In the post-war period and particularly after Singapore was granted self-government, the establishment of a national education system was followed by the emergence of national examinations: the Primary School Leaving Examinations and the Singapore-Cambridge GCE N/O/A Levels for every school-going child in Singapore. Thereafter, the nature of national examinations evolved with the changing needs of education and the nation. At the turn of the century, with the Ministry of Education's decision to take greater control of examinations, the Singapore Examinations and Assessment Board was established, to oversee new developments in examinations. Unlike most literature on education where examinations are often mentioned as an outcome of educational goals and objectives, this book focuses on examinations per se. Examinations have gained a momentum of their own, and it is interesting to note the development of examinations against the backdrop of the broader history of Singapore and of

education in Singapore.

Since the late 1970s, Sri Lanka has undergone a socio-economic transformation, from protectionism towards economic liberalisation and increasing integration into the world economy. Through a systematic comparison of these periods of economic change (1956–1977, and 1977 to the present), Angela W. Little and Siri T. Hettige examine the impact of this transformation on education, youth employment and equality of opportunity in Sri Lanka. The book charts Sri Lanka's shift from a predominantly agricultural economy to one dominated by services and manufacturing, a reduction in

unemployment, rising educational and occupational levels, expectations and achievements, and a reduction in poverty. In turn, it reveals a growing role for the private sector and foreign interests in post-secondary education and a modest growth in private education at the primary and secondary levels, as well as widening social disparities in access to qualifications, training and skills. The Sri Lankan experience of, and engagement with, globalisation has been tempered by a long-running ethnic conflict that hindered economic and social development and diverted considerable public funds into defence and war. Now that the war is 'won', the challenge is how to invest in human resource development and the fulfilment of the expectations of youth from all ethnic and social groups. This challenge requires serious policy analysis, the generation of more state revenues, the reallocation of existing public resources, and a political commitment to the winning of a sustainable peace and stability. This book makes an important contribution to the broader international literature on the implications of globalisation for education policy and practice, and to the interaction of exogenous and endogenous forces for educational change. It deals with the tension between the high social demand for education and the growing demand for specialised skills in a changing economy. As such, it has a wide interdisciplinary appeal across education policy and politics, Asian education, South Asian society, youth policy, sociology of education, political economy of social change, and globalisation.
