Mention the phrase Homeland Security and heated debates emerge about state uses and abuses of legal authority. This timely book is a comprehensive treatise on the constitutional and legal history behind the power of the modern state to police its citizens. Dubber explores the roots of the power to police—the most expansive and least limitable of governmental powers—by focusing on its most obvious and problematic manifestation: criminal law. He argues that the defining characteristics of this power, including the inability to accurately define it, reflect its origins in the discretionary and virtually limitless patriarchal power of the householder over his household. The paradox of patriarchal police power as the most troubling yet least scrutinized of governmental powers can begin to be resolved by subjecting this branch of government to the critical analysis it merits. Dubber shows us that the question must become how can the police power and criminal law together serve the goals of social equity that define and give direction to contemporary democratic societies? This book goes to the heart of this neglected but crucial topic.

It is generally recognized that the commercial success of biotechnology products is highly dependent on the successful development and application of high-powered separation and purification methods. In this practical and authoritative handbook, the separation of proteins, nucleic acids, and oligonucleotides from biological matrices is covered from analytical to process scales. Also included in a chapter on the separation of monoclonal antibodies, which have found numerous uses as therapeutic and diagnostic agents. Analytical techniques include an interesting montage of chromatographic methods, capillary electrophoresis, isoelectric focusing, and mass spectrometry. Among separation and purification methods, liquid-liquid distribution, displacement chromatography, expanded bed adsorption, membrane chromatography, and simulated moving bed chromatography are covered at length. Regulatory and economic considerations are addressed, as are plant and process equipment and engineering process control. A chapter on future developments highlights the application of DNA chip arrays as well as evolving methodologies for a large number of drugs that are under development for treatment of cancer, AIDS, rheumatoid arthritis, and Alzheimer's disease. Handbook of Bioseparations serves as an essential reference and guidebook for separation scientists working in the pharmaceutical and biotechnology industries, academia, and government laboratories. Key Features * Covers bioseparations of proteins, nucleic acids, and monoclonal antibodies * Encompasses both analytical and process-scale methods * Elucidates the importance of engineering process control * Details selection of plant and process equipment * Addresses economic considerations * Discusses future developments

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

A powerful tribute to feminist sci-fi about bicycles. It gravitates away from the unfortunately-traditional macho heroes, hurtling through space with giant guns, ready to protect and/or tame their scantily clad space babe. Elly's visions of the future are populated by strong, intelligent, empowered women with complex personalities. Heroines find meaning and freedom on two wheels in the confines of a gated space society and in the ravaged earth left behind. Racers compete in deep space and on otherworldly planets. From fantasy to hard sci-fi to dystopia, there's something for everyone in this little volume that launched a genre.

Mini celebrates 60 amazing years of this iconic car, from its revolutionary introduction to the popularity of its new-generation models. The first two-door Mini, introduced in 1959 and built until 2000, revolutionized automotive design with its innovative front-wheel-drive layout that made the car appear bigger on the inside than the outside. In 1999, the Mini was voted the second most influential car of the 20th century, behind the Ford Model T. Designed for British Motor Corporation (BMC) by Sir Alec Issigonis and manufactured in England, Australia, Spain, Belgium, Chile, Italy, Portugal, South Africa, Uruguay, Venezuela, and Yugoslavia, the Mini was as successful in competition as it was on the street, winning the Monte Carlo Rally four times from 1964 through 1967. Originally built by BMC, the Mini's later parent company, Rover, was acquired by BMW in 1994. In 2000, BMW sold most of the Rover Group but retained the Mini brand. The last and 5,387,862nd original Mini rolled off the production line in October, 2000. In July 2001, BMW launched production of the new-generation of Mini which was soon joined by Countryman, Clubman, convertible, Cooper Works, and numerous special editions. Nearly 20 years later, the new Minis remain as popular as the original from 1959.

Modern society has a negative view of youth as a period of storm and stress, but at the same time cherishes the idea of eternal youth. How does this compare with ancient Roman society? Did a phase of youth exist there with its own characteristics? How was youth appreciated? This book studies the lives and the image of youngsters (around 15–25 years of age) in the Latin West and the Greek East in the Roman period. Boys and girls of all social classes come to the fore; their lives, public and private, are sketched with the help of a range of textual and documentary sources, while the authors also employ the results of recent neuropsychological research. The result is a highly readable and wide-ranging account of how the crucial transition between childhood and adulthood operated in the Roman world.

Designed for undergraduates, graduate students, and industry practitioners, *Bioseparations Science and Engineering* fills a critical need in the field of bioseparations. Current, comprehensive, and concise, it covers bioseparations unit operations in unprecedented depth. In each of the chapters, the authors use a consistent method of explaining unit operations, starting with a qualitative description noting the significance and general application of the unit operation. They then illustrate the scientific application of the operation, develop the required mathematical theory, and finally, describe the applications of the theory in engineering practice, with an emphasis on design and scaleup. Unique to this text is a chapter dedicated to bioseparations process design and economics, in

which a process similar, SuperPro Designer® is used to analyze and evaluate the production of three important biological products. New to this second edition are updated discussions of moment analysis, computer simulation, membrane chromatography, and evaporation, among others, as well as revised problem sets. Unique features include basic information about bioproducts and engineering analysis and a chapter with bioseparations laboratory exercises. Bioseparations Science and Engineering is ideal for students and professionals working in or studying bioseparations, and is the premier text in the field.

The book also presents country studies to compare populist movements and parties, such as the Five Stars Movement in Italy, Syriza in Greece and UKIP in the UK. It offers insights into the historical and normative roots of the diverse anti-European standpoints, and the various political demands and agendas connected with these views, ranging from rejections of EU institutions to demands for institutional reforms and propositions for alternative projects.

Purpureae vestes estudia un element fonamental en la vida de qualsevol societat antiga com és el vestit i els colors utilitzats per a la seua ornamentació, especialment la púrpura. El luxe en el vestir implicava l'ús de materials com l'or per a la confecció de certs complements. Amb uns antecedents clarament orientals de recerca de la magnificència externa de reis i d'altres dignataris, el simbolisme del color en l'ornamentació personal va constituir, a les ciutats riberenques de la Mediterrània, un factor important de distinció social. Bé fossen de procedència vegetal, mineral o animal, els tints van donar sempre l'«ànima» als tèxtils. Per això, el poder imperial romà, en alguns períodes de la seua història, va controlar amb normes legals de major o menor duresa l'ús de determinats colors obtinguts a partir de gasteròpodes marins. L'obra tracta extensament els aspectes econòmics i tècnics relacionats amb l'elaboració i comercialització de vestits i teles per a altres usos (veles, adorns de la llar, etc.). A partir de diversos punts de vista, entre els que s'inclouen les dades

arqueològiques o les referències etnograficocomparatives, s'hi incideix en les etapes de preparació de les fibres tèxtils, en les formes d'elaboració dels teixits més complexos a través de la reconstrucció experimental, en el treball dels pescadors i manufacturers que elaboraven en tallers costaners el tint més valorat, la púrpura, o en els qui treballaven en els tallers de la ciutat, així com en l'anàlisi i descripció detallada dels resultats extrets de les restes tèxtils aparegudes en jaciments, de l'Egipte romà sobretot, que ens mostren encara avui la riquesa i vivor dels seus colors.
