This textbook provides a sound foundation in physical optics by covering key concepts in a rigorous but accessible manner. Propagation of electromagnetic waves is examined from multiple perspectives, with explanation of which viewpoints and methods are best suited to different situations. After an introduction to the theory of electromagnetism, reflection, refraction, and dispersion, topics such as geometrical optics, interference, diffraction, coherence, laser beams, polarization, crystallography, and anisotropy are closely examined. Optical elements, including lenses, mirrors, prisms, classical and Fabry-Perot interferometers, resonant cavities, multilayer dielectric structures, interference and spatial filters, diffraction gratings, polarizers, and birefringent plates, are treated in depth. The coverage also encompasses such seldom-covered topics as modeling of general astigmatism via 4x4 matrices, FFT-based numerical methods, and bianisotropy, with a relativistic treatment of optical activity and the Faraday and Fresnel-Fizeau effects. Finally, the history of optics is discussed.

This book explores the meaning of quality of life in care for older persons and introduces the reader to their main concerns when receiving care. Based on qualitative research, it pays particular attention to the needs and requirements of older people, considering their individual family situations, social circumstances, values and lifestyles. Person-centred care is a way of providing nursing care that puts older people and their families at the core of all decisions, seeing each person as an individual, and working together to develop appropriate solutions. Following an introduction to the concept of quality of life in old age, the book reviews essential findings from worldwide research into the experiences of older people with regard to nursing care and the impact of these experiences on their quality of life. It investigates health promotion, care provided in nursing homes and assisted living facilities, and palliative care. Each chapter includes a brief introduction to the respective field of nursing care and the problems it has to deal with, concluding with a discussion of their implications for nursing practice in the respective field of care. In closing, the evidence from qualitative research is discussed in relation to current gerontological theories.

In Ancient Greece, a skilled marble sculptor has been blessed by a goddess who has given his masterpiece – the most beautiful woman the town has ever seen – the gift of life. Now his wife, Galatea is expected to be obedience and humility personified, but it is not long before she learns to use her beauty as a form of manipulation. In a desperate bid by her obsessive husband to keep her under control, she is locked away under the constant supervision of doctors and nurses. But with a daughter to rescue, she is determined to break free, whatever the cost... From the Orange Prize-winning author of *The Song of Achilles*, this short story is a dazzling retelling of the myth of Galatea.

*Practical FP in Scala: A hands-on approach*, is a book for intermediate to advanced Scala developers. Aimed at those who understand functional effects, referential transparency and the benefits of functional programming to some extent but who are missing some pieces to put all these concepts together to build a large application in a time-constrained manner. Throughout the chapters we will design, architect and develop a complete stateful application serving an API via HTTP, accessing a database and dealing with cached data, using the best practices and best functional libraries available in the Cats ecosystem. You will also learn about common design patterns such as managing state, error handling and anti-patterns, all accompanied by clear examples. Furthermore, at the end of the book, we will dive into some advanced concepts such as MTL, Classy Optics and Typeclass derivation.

“Tears of Salt... reveals the human side of suffering through the life of one man.”  
—Adele Annesi, *Washington Independent Review of Books* Situated more than one hundred miles off Italy's southern coast, the rocky island of Lampedusa has hit world headlines in recent years as the first port of call for hundreds of thousands of African and Middle Eastern refugees fleeing civil war and terrorism and hoping to make a new life in Europe. Dr. Pietro Bartolo, who runs the lone medical clinic on the island, has been caring for many of them—both the living and the dead—for a quarter century. *Tears of Salt* is Dr. Bartolo's moving account of his life and work set against one of the signal crises of our time. With quiet dignity and an unshakable moral center, he tells unforgettable tales of pain and hope,

stories of those who didn't make it and those who did.

Now in its second edition, Gray's Anatomy Review continues to be an easy-to-use resource that helps you relate anatomy to clinical practice and pass your exams. Designed as a companion to Gray's Anatomy for Students, this medical textbook is your indispensable resource for both in-course examinations and the USMLE Step 1. Consult this title on your favorite e-reader, conduct rapid searches, and adjust font sizes for optimal readability. Enhance your understanding of the subject and access more detailed information with specific page references to Gray's Anatomy for Students, plus key answers and explanations to Gray's Basic Anatomy and Gray's Atlas of Anatomy. Challenge your grasp of anatomical knowledge and the anatomical basis of disease with more than 500 high-quality, USMLE-style questions, complete with answers and rationales, that mirror the actual USMLE Step 1. Visualize key concepts with updated radiologic images and extensive use of photographs. Understand the latest imaging techniques as seen in clinical practice with the most current knowledge available on today's anatomical imaging modalities.

A must have for any nurse wanting to expand their knowledge in this area of wound care. Wound Care Nursing 3rd edition introduces a person-centred approach to wound care practice across the lifespan. The book is fully illustrated with colour photographs and illustrations throughout, and including extensive case studies to demonstrate the practical applications of the most recent research in this area. New content covering pressure ulcers, incontinence associated dermatitis, venous leg ulcers and palliative wound care. Uniquely it uses a lifespan perspective addressing the care of wounds in all patients from birth to old age. All chapters have been fully updated to reflect the current evidence base. Nursing theory is used throughout instead of a traditional medical approach, making the material more applicable to nursing practice. Links current nursing theory to practice using extensive case studies. High quality full colour photographs and illustrations throughout.

Award-winning author Matt Rees takes readers to 18th century Austria, where Mozart's estranged sister Nannerl stumbles into a world of ambition, conspiracy, and immortal music while attempting to uncover the truth about her brother's suspicious death. Did Mozart's life end in murder? Nannerl must brave dire circumstances to find out, running afoul of the secret police, the freemasons, and even the Austrian Emperor himself as she delves into a scandal greater than she had ever imagined. With captivating historical details, compelling characters, and

areal-life mystery upon which everything hinges, Rees—the award-winning author of the internationally acclaimed Omar Youssef crime series—writes in the tradition of Irvin Yalom's *When Nietzsche Wept*, Louis Bayard's *The Pale Blue Eye*, and Phillip Sington's *The Einstein Girl* to achieve the very best in historical fiction with *Mozart's Last Aria*.

This book is for all those professionals directly or indirectly working in magnetic resonance, and arises from the need to have available a complete and comprehensible guide, in order to recognize, construe and work out almost all the artifacts that can currently be observed in the supplied scanners, being low-field, mid-field, high-field or ultra-high-field. The content includes many demonstrative images and few mathematical formula, moreover simple to be construed, in order to make easily comprehensible the complex mechanisms hidden behind MR Physics, connected to the artifact under consideration. The text presents a basic introduction to the magnetic resonance and a glossary of used acronyms, so that the principles related to k-space, impulse sequences and relaxation times are clearly understood. Artifacts are effectively classified in chapters and subchapters, according to the underlying cause generating them. Each artifacts group is dealt with following a logic providing for: -Introduction to the specific artifact-related technique.-Modes by which the artifact shows itself, on the basis of images and text.-Technical solutions suited to the resolutions.-Online examinations, videos, focuses, overview tables with access linked to the credentials obtained when purchasing the original text.
