The Code of Federal Regulations is a codification of the general and permanent rules published in the Federal Register by the Executive departments and agencies of the United States Federal Government.

FinTech, especially digital payments, is a fascinating space. More than trillion dollars' worth of digital payments are done, and we are 'just getting started'. Online payments space is attractive and intriguing to many. A young graduate wants to build a career in this domain, a user wants to know how payments are done and a merchant wants to know the processes. Just like India, full of diversity, even India's payments ecosystem is full of different types of payment instruments, payment service providers, and solutions that adhere to complex processes while getting constantly shaped and re-shaped by Government, RBI, new business models, and other market forces. One can refer RBI website or read Visa documents or NPCI's product specs to learn. But those documents are far too technical and loaded with heavy jargons. The blogs of the FinTech companies are more like sales pitches than giving neutral understanding about the topic. How can one go about learning about this domain? I had that question when I started my career in FinTech. Over the years, I learnt from others and from experience. Based on my learnings, I started a blog 'Auth n Capture'. After more than 2 years and ~60 articles later, here I am writing this book. This book is a beginner's guide for FinTech enthusiasts and professionals to understand the basics of India's payments ecosystems.

Information and Communication Technology (ICT) is becoming indispensable in the spheres of business, government, education and entertainment. It makes Internet marketing, e-government, e-learning and online chat services possible. And its commercial aspect, e-commerce, is part of this trend. Today, no business training is complete without the inclusion of at least the basics of e-commerce. But although e-commerce has opened up new opportunities, it also presents threats and risks. The success of e-commerce hinges on security and trust. Every business manager should therefore have a fundamental awareness of the meaning of e-commerce and ICT security and risk management. This second edition provides guidelines for overcoming these challenges by exploring the ways in which entrepreneurs and managers should co-operate with IT experts to exploit opportunities and combat the threats imposed by new technologies.

Automatic offers an innovative new way to think about how Americans can save for retirement. Over the past quarter century, America's pension system has shifted away from defined benefit plans and toward defined contribution savings programs such as 401(k)s and IRAs. There is much to be done to improve the defined contribution system. Many workers fail to participate and those who do often contribute too little, invest the funds poorly, and are not adequately prepared to manage funds while in retirement. To resolve these problems, the authors propose that employees should be automatically enrolled into a 401(k) plan when they are hired, with the right to opt out, change the amount that they contribute, or change investment choices if they choose. If the employer does not sponsor a 401(k) or similar retirement plan, they would be enrolled in a payroll deduction Automatic IRA. This vision of a transformed defined contribution system incorporates key positive features of defined benefit plans to improve retirement security. Employers' contributions would increase over time, their investments would benefit from professional management and rebalancing, and they would receive lifetime income upon retirement. These automatic features will make the 401(k) and similar plans a more effective tool for retirement saving, and they can be extended to the many workers who do not currently have access to an employer plan. In Automatic, the authors

present proposals to implement automatic features in all phases of the 401(k) and in IRAs for workers with no employer plan. They also draw from the experience of countries that have implemented automatic saving structures.
