This book studies how doctors responded to - and helped shape - deep-seated fears about nervous degeneracy and population decline in France between 1750 and 1850. It uncovers a rich and far-ranging medical debate in which four generations of hygiene activists used biomedical science to transform the self, sexuality and community in order to regenerate a sick and decaying nation; a programme doctors labelled 'physical and moral hygiene'. Moreover, it is shown how doctors imparted biomedical ideas and language that allowed lay people to make sense of often bewildering socio-political changes, thereby giving them a sense of agency and control over these events. Combining a chronological and thematic approach, the six chapters in this book trace how doctors began their medical crusade during the middle of the Enlightenment, how this activism flowered during the French Revolution, and how they then revised their views during the period of post-revolutionary reaction. The study concludes by arguing that medicine acquired an unprecedented political, social and cultural position in French society, with doctors becoming the primary spokesmen for bourgeois values, and thus helped to define the new world that emerged from the post-revolutionary period.

"Fascinating. Doidge's book is a remarkable and hopeful portrait of the endless adaptability of the human brain."—Oliver Sacks, MD, author of *The Man Who Mistook His Wife for a Hat* What is neuroplasticity? Is it possible to change your brain? Norman Doidge's inspiring guide to the new brain science explains all of this and more An astonishing new science called neuroplasticity is overthrowing the centuries-old notion that the human brain is immutable, and proving that it is, in fact, possible to change your brain. Psychoanalyst, Norman Doidge, M.D., traveled the country to meet both the brilliant scientists championing neuroplasticity, its healing powers, and the people whose lives they've transformed—people whose mental limitations, brain damage or brain trauma were seen as unalterable. We see a woman born with half a brain that rewired itself to work as a whole, blind people who learn to see, learning disorders cured, IQs raised, aging brains rejuvenated, stroke patients learning to speak, children with cerebral palsy learning to move with more grace, depression and anxiety disorders successfully treated, and lifelong character traits changed. Using these marvelous stories to probe mysteries of the body, emotion, love, sex, culture, and education, Dr. Doidge has written an immensely moving, inspiring book that will permanently alter the way we look at our brains, human nature, and human potential.

This handbook includes contributions from established and emerging scholars from around the world and draws on multiple approaches and subjects to explore the socio-economic, cultural, ecological, institutional, legal, and policy aspects of regenerative food practices. The future of food is uncertain. We are facing an overwhelming number of interconnected and complex challenges related to the ways we grow, distribute, access, eat, and dispose of food. Yet, there are stories of hope and opportunities for radical change towards food systems that enhance the ability of living things to co-evolve. Given this, activities and imaginaries looking to improve, rather than just sustain, communities and ecosystems are needed, as are fresh perspectives and new terminology. The Routledge Handbook of Sustainable and Regenerative Food Systems addresses this need. The chapters cover diverse practices, geographies, scales, and entry-points. They focus not only on the core requirements to deliver sustainable agriculture and food supply, but go beyond this to think about how these can also actively participate with social-ecological systems. The book is presented in an accessible way, with reflection questions meant to spark discussion and debate on how to transition to safe, just, and healthy food systems. Taken together, the chapters in this handbook highlight the consequences of current food practices and showcase the multiple ways that people are doing food differently. The Routledge Handbook of Sustainable and Regenerative Food Systems is essential reading for students and scholars interested in food systems, governance and practices, agroecology, rural sociology, and socio-environmental studies.

Images of bodies and bodily practices abound in early America: from spirit possession, Fasting Days, and infanticide to running the gauntlet, going "naked as a sign," flogging, bundling, and scalping. All have implications for the study of gender, sexuality, masculinity, illness, the "body politic," spirituality, race, and slavery. The first book devoted solely to the history and theory of the body in early American cultural studies brings together authors representing diverse academic disciplines. Drawing on a wide range of archival sources—including itinerant ministers' journals, Revolutionary tracts and broadsides, advice manuals, and household inventories—they approach the theoretical analysis of the body in exciting new ways. A Centre of Wonders covers such varied topics as dance and movement among Native Americans; invading witch bodies in architecture and household spaces; rituals of baptism, conversion, and church discipline; eighteenth-century women's journaling; and the body as a rhetorical device in the language of diplomacy.

The Routledge Companion to the French Revolution in World History engages with some of the most recent trends in French revolutionary scholarship by considering the Revolution in its global context. Across seventeen chapters an international team of contributors examine the impact of the Revolution not only on its European neighbours but on Latin America, North America and Africa, assess how far events there impacted on the Revolution in France, and suggest something of the Revolution's enduring legacy in the modern world. The Companion views the French Revolution through a deliberately wide lens. The first section deals with its global repercussions from the Mediterranean to the Caribbean and includes a discussion of major insurrections such as those in Haiti and Venezuela. Three chapters then dissect the often complex and entangled relations with other revolutionary movements, in seventeenth-century Britain, the American colonies and Meiji Japan. The focus then switches to international involvement in the events of 1789 and the circulation of ideas, people, goods and capital. In a final section contributors throw light on how the Revolution was and is still remembered across the globe, with chapters on Russia, China and Australasia. An introduction by the editors places the Revolution in its political, historical and historiographical context. The Routledge Companion to the French Revolution in World History is a timely and important contribution to scholarship of the French Revolution.

Death inhabits our collective imaginary, even though sometimes, like a squatter, it hides discretely in order to avoid conflicts. It is undoubtedly a multi-faceted subject of study, which requires consideration from an interdisciplinary perspective. This book deals with this phenomenon, and more specifically with the discourses that surround – and construct our perspectives and understanding of – death and dying. Of course, the present volume does not attempt to be exhaustive, and considers the subject from several standpoints, including linguistics, anthropology, history of medicine, and importantly, literary studies. It combines various points of view and different methodologies of knowledge, in the hope that they come together to constitute a written

dialogue –or more precisely, a polylogue. The ordering of the texts in this volume provides readers with an itinerary that begins with more general approaches, such as a historical presentation of the medicalisation of death and an in-depth reflection on the best way to die, and ends with studies of specific literary works from different periods. The itinerary that this book provides is framed by a discourse analysis-based overview that explores how different approaches to death and dying intersect and complement each other in an interdisciplinary endeavour. This analysis focuses on literary and non-literary genres in order to shed some new light on a topic that is inexhaustible because of its sociocultural relevance.

"This book is not a call to the violent overthrow of the government, nor is it a call to take up arms, nor is it a call to political activism in and of itself. It is a call to something far more extreme, a call to live out the gospel with all its radical claims, a call for the people of God to impact this generation with the prophetic message of repentance, a call to spark the most sweeping counterculture movement in our nation's history, a call to take back the moral high ground that has been stolen from under our feet, a call to follow Jesus by life or by death"--Page 4 of cover.

The author argues for the continued importance of NGOs, social movements and other 'civil society' actors in creating new forms of citizenship and democracy in South Africa.

The book describes the journey into the growing arena of clinical stem cell therapy by highlighting not only the road that brought a team of physicians together but also real stories from a number of their patients that were given their health back through the magic of stem cell therapy. Your fat is loaded with stem cells that can be used now to treat and reverse a large number of inflammatory and degenerative conditions. Most people have no idea that these magical cells actually exist right within our bodies. They think that they must wait until Big Pharma or a university PhD manufactures them from embryos. Yet the Cell Surgical Network, under the guidance of Drs. Berman and Lander, has been gathering investigational data that shows your cells are safe and effective in a large variety of clinical conditions. Almost any condition caused by damage or degradation of your own body cells has the potential for being improved using stem cells. And the potential actually exists to use your own cells to extend your life in a healthy, functional manner. The stem cell revolution train has left the station.

Exploring how Algerian Jews responded to and appropriated France's newly conceived "civilizing mission" in the mid-nineteenth century, *Arabs of the Jewish Faith* shows that the ideology, while rooted in French Revolutionary ideals of regeneration, enlightenment, and emancipation, actually developed as a strategic response to the challenges of controlling the unruly and highly diverse populations of Algeria's coastal cities.

Much research has focused on the basic cellular and molecular biological aspects of stem cells. Much of this research has been fueled by their potential for use in regenerative medicine applications, which has in turn spurred growing numbers of translational and clinical studies. However, more work is needed if the potential is to be realized for improvement of the lives and well-being of patients with numerous diseases and conditions. This book series 'Cell Biology and Translational Medicine (CBTMED)' as part of SpringerNature's longstanding and very successful *Advances in Experimental Medicine and Biology* book series, has the goal to accelerate advances by timely information exchange. Emerging areas of regenerative medicine and translational aspects of stem cells are covered in each volume. Outstanding researchers are recruited to highlight developments and remaining challenges in both the basic research and clinical arenas. This current book is the fifth volume of a continuing series.

Antoine de Baecque takes a look at the very public death of the great orator and libertine, Mirabeau; describes the pageantry of the procession carrying Voltaire's body to the Pantheon; and investigates the sexually-charged myths surrounding the murder of Marie Antoinette's intimate friend, the Princesse de Lamballe. He recreates the tense and awe-inspiring spectacle of Louis XVI's execution, and examines the agonizing final hours of the defeated and disfigured Robespierre."--BOOK JACKET.

Are eugenics practices morally defensible? Who should have access to genetic information about particular individuals? What dangers for cultural and racial diversity do developments in genetics pose? And how should scientific research be regulated and by whom? These are some of the questions addressed in this book, which comprises the 1998 Oxford Amnesty Lectures. The lecturers are all respected in their specific field, including Hilary Putnam, Ian Wilmut (co-creator of 'Dolly' the sheep), and Jonathan Glover. Each lecture is preceded by a discussion article written by prominent lawyers, scientists, and philosophers, and a foreword has been written by Richard Dawkins. Fascinating and thought-provoking, this book is essential reading for all those interested in the future of genetics and humankind.

"This book examines how a group of transnational British-Italian women affiliated with the exiled patriots of the Italian Left repurposed traditionally feminine activities, such as fundraising, gift-giving, maternity, and memory collection, to make a substantial contribution to Italian Unification and state-building. Through their actions, Mary Chambers, Sara Nathan, Giorgina Saffi, Julia Salis Schwabe, and Jessie White Mario transcended the boundaries of acceptable behavior for middle-class women and participated in the broader female emancipation movement. By drawing attention to their activities, this book reveals how nineteenth-century female activists achieved their most revolutionary goals by using conservative, domestic, or anti-Catholic language. Adding to the growing understanding of the Italian Risorgimento as a transnational phenomenon, it also shows how non-Catholic and non-Italian women participated in the creation and development of the Italian state. Finally, the book argues for the continuing importance of religion in both politics and philanthropy throughout the nineteenth century." Diana Moore is Adjunct Assistant Professor of History at John Jay College of Criminal Justice, CUNY, USA.

Criticism has largely emphasised the private meaning of 'Romantic Satanism', treating it as the celebration of subjectivity through allusions to Paradise Lost that voice Satan's solitary defiance. The first full-length treatment of its subject, Romantic Satanism explores this literary phenomenon as a socially produced myth exhibiting the response of writers to their milieu. Through contextualized readings of the major works of Blake, Shelley, and Byron, this book demonstrates that Satanism enabled Romantic writers to interpret their tempestuous age: it provided them a mythic medium for articulating the hopes and

fears their age aroused, for prophesying and inducing change.

In a groundbreaking book that challenges many assumptions about gender and politics in the French Revolution, Suzanne Desan offers an insightful analysis of the ways the Revolution radically redefined the family and its internal dynamics. She shows how revolutionary politics and laws brought about a social revolution within households and created space for thousands of French women and men to reimagine their most intimate relationships. Families negotiated new social practices, including divorce, the reduction of paternal authority, egalitarian inheritance for sons and daughters alike, and the granting of civil rights to illegitimate children. Contrary to arguments that claim the Revolution bound women within a domestic sphere, *The Family on Trial* maintains that the new civil laws and gender politics offered many women unexpected opportunities to gain power, property, or independence. The family became a political arena, a practical terrain for creating the Republic in day-to-day life. From 1789, citizens across France—sons and daughters, unhappily married spouses and illegitimate children, pamphleteers and moralists, deputies and judges—all disputed how the family should be reformed to remake the new France. They debated how revolutionary ideals and institutions should transform the emotional bonds, gender dynamics, legal customs, and economic arrangements that structured the family. They asked how to bring the principles of liberty, equality, and regeneration into the home. And as French citizens confronted each other in the home, in court, and in print, they gradually negotiated new domestic practices that balanced Old Regime customs with revolutionary innovations in law and culture. In a narrative that combines national-level analysis with a case study of family contestation in Normandy, Desan explores these struggles to bring politics into households and to envision and put into practice a new set of familial relationships.

A call for Christian involvement in social and sexual issues such as divorce, abortion, euthanasia, homosexuality, and AIDS.

Anne Duden's reputation as one of the most innovative writers of her generation, established in 1982 with the experimental stories in *Übergang*, was confirmed in 1985 by *Das Judasschaf*, a novel interweaving an individual's anguish with the cultural trauma of the German past. In her acclaimed poem cycles *Steinschlag* (1993) and *Hingegend* (1999) Duden pushes the limits of language in densely metaphoric evocations of landscapes and places of political and personal remembrance, mixing lament for ruined nature with grotesque comedy, mystic vision with horror. Duden is a distinguished practitioner of short forms. Her essays display the same intense engagement with the visual arts as informs her narrative texts. Her deep interest in music is echoed in the musicality of short prose poems. This volume presents for the first time a comprehensive collection of approaches to Duden's fiction, poetry and essays by international scholars. Topics include: the ethics and aesthetics of Duden's engagement with German history; her constructions of female subjectivity; her criticism of western dualistic thinking with its devaluation of the body and exploitation of nature; her position within a modernist tradition with roots in the Romantic Age; the visual arts and poetic influences such as Hölderlin and Celan; the dilemmas of translating Duden's highly individual style. Three essays on *Steinschlag* constitute the first systematic reading of this difficult, much praised cycle.

*William Blake and the Daughters of Albion* offers a challenge to the Blake establishment. By placing some of Blake's early prophetic works in startlingly new historical contexts (most provocatively those of female conduct and pornography) a very different image of the radical Blake emerges. The book shows what can be achieved when a challenging methodology, feminist historicism, is brought to bear on a canonical writer and on now canonized interpretations of his work.

Burke's *Reflections on the Revolution in France* was the first sustained theoretical critique of the French Revolution; and is now recognised as the classic statement of modern conservatism. *Reflections* surveys the British political culture of traditionalism, gradualism and deference, and contrasts it with the French Revolutionaries' programme of appeal to abstract right, transformational change and popular agency. Ultimately Burke advocated a counterrevolutionary war and the restoration of the French monarchy. This accessible new edition brings together for the first time Burke's first and last published thoughts on the revolution including as it does the first *Letter on a Regicide Peace*; a work that has contributed to a particular view of international society. Featuring a comprehensive introduction and extensive annotations, Iain Hampsher-Monk's edition helps readers new to Burke to better understand the historical, political and philosophical context behind his writings, and the significance of contemporary and classical allusions.

This book is the first comprehensive study of sexual lives in Germany and occupied Europe during the First World War. Reconsidering sex in war brings to life a whole cast of characters too often left out of the historical narrative: widowed women who worked as prostitutes, fresh-faced recruits who experienced the war in a VD hospital, eugenicists who conflated sex and national decline, soldiers' wives ostracized by neighbourhood rumour mills. By considering the confluence of public discourse, state policy, and everyday life, Lisa M. Todd adds to the growing body of knowledge on war and society in the twentieth century. By incorporating the 1914-1918 experience into the longer frame of the pre-war sex reform movement and the post-war Allied occupation of the Rhineland, this book is able to more fully evaluate the impact of the war years on the history of intimate relations in early twentieth-century Germany.

No feminism or feminist philosophy without "A Vindication of the Rights of Woman". Wollstonecraft argues not only that women ought to have the education of a woman should fit her position and role in society, but also that they are human beings and thus deserve the same fundamental rights as men.
