Making Sense of Education provides a contemporary introduction to the key issues in educational philosophy and theory. Exploring major past and present conceptions of education, teaching and learning, this book makes philosophy of education relevant to the professional practice of teachers and student teachers, as well of interest to those studying education as an academic subject. The book is divided into three parts: education, teaching and professional practice: issues concerning education, the role of the teacher, the relationship of educational theory to practice and the wider moral dimensions of pedagogy learning, knowledge and curriculum: issues concerning behaviourist and cognitive theories of learning, knowledge and meaning, curriculum aims and content and evaluation and assessment schooling, society and culture: issues of the wider social and political context of education concerning liberalism and communitarianism, justice and equality, differentiation, authority and discipline. This timely and up-to-date introduction assists all those studying and/or working in education to appreciate the main philosophical sources of and influences on present day thinking about education, teaching and learning

While traditionally identified as a practice-based endeavour, the many dimensions of teacher education raise important philosophical issues that emphasise the centrality of ethics to questions of relationality and professional practice. This second volume of the

Educational Philosophy and Theory reader series demonstrates the continuing relevance of philosophical approaches to the field of teacher education. The collection of texts focuses on a wide range of topics, including teacher education in a cross-cultural context, the notion of unsuccessful teaching, democratic teacher education, the reflective teacher, the ethics and politics of teacher identity, and subjectivity and performance in teaching. Chapters also explore teacher education based on experiential learning as 'experience', demonstrating the continuing relevance of philosophical approaches to the field. In Search of Subjectivities will interest academics, researchers and postgraduate students in the fields of philosophy of education, philosophy, education, educational theory, teacher education, experiential philosophy, ethics, policy and politics of education, and professional practice.

investigations and frame their arguments. These dialogues address the specialized and technical aspects of conducting educational research, conceptualize the relationship between methodology and theory, and provide in-depth discussion of concerns including falsifiability, openness, interpretation and researcher judgement.

Foregrounding the researchers' first-hand experience and knowledge, this book will provide future and current researchers with a deeper comprehension of the place of theory in education research. An illuminating resource for undergraduate and postgraduate researchers alike, *Theory and Philosophy in Education Research* confronts the intricate complexities of conducting education research in a highly engaging and accessible way.

This volume of essays demonstrates and comments on philosophical methods in educational research. by contemporary thinkers in the history, philosophy, practice and theories of the field. Filling a much needed void in existing literature, this book equips scholars and practitioners with knowledge, skills, and attitudes to succeed in the field of CTE. Science Teaching argues that science teaching and science teacher education can be improved if teachers know something of the history and philosophy of science and if these topics are included in the science curriculum. The history and philosophy of science have important roles in many of the theoretical issues that science educators need to address: what constitutes an appropriate science curriculum for all students; how science should be taught in traditional cultures; how scientific literacy can be promoted; and the conflict which can occur between science curriculum and deep-seated religious or cultural values and knowledge. Outlining the history of liberal approaches to the teaching of science, Michael Matthews elaborates contemporary curriculum developments that explicitly address questions about the nature and the history of science. He provides examples of classroom teaching and develops useful arguments on constructivism, multicultural science education and teacher education. This book evaluates the increasingly wide variety of intellectual resources for research methods and methodologies and investigates what constitutes good educational research. Written by a distinguished international group of philosophers of education Questions what sorts of research can usefully inform policy and practice, and what inferences can be drawn from different kinds of research Demonstrates the critical

The definitive career guide for grad students, adjuncts, post-docs and anyone else eager to get tenure or turn their Ph.D. into their ideal job Each year tens of thousands of students will, after years of hard work and enormous amounts of money, earn their Ph.D. And each year only a small percentage of them will land a job that justifies and rewards their investment. For every comfortably tenured professor or well-paid former academic, there are countless underpaid and overworked adjuncts, and many more who simply give up in frustration. Those who do make it share an important asset that separates them from the pack: they have a plan. They understand exactly what they need to do to set themselves up for success. They know what really moves the needle in academic job searches, how to avoid the all-too-common mistakes that sink so many of their peers, and how to decide when to point their Ph.D. toward other, non-academic options. Karen Kelsky has made it her mission to help readers join the select few who get the most out of their Ph.D. As a former tenured professor and department head who oversaw numerous academic job searches, she knows from experience exactly what gets an academic applicant a job. And as the creator of the popular and widely respected advice site The Professor is In, she has helped countless Ph.D.'s turn themselves into stronger applicants and land their dream careers. Now, for the first time ever, Karen has poured all her best advice into a single handy guide that addresses the most important issues facing any Ph.D., including:

- When, where, and what to publish
- Writing a foolproof grant application
- Cultivating references and crafting the perfect CV
- Acing the job talk and campus interview
- Avoiding the adjunct trap
- Making the leap to nonacademic work, when the time is right

The Professor Is In addresses all

of these issues, and many more.

**100 Ideas: QUICK - EASY - INSPIRED - OUTSTANDING** How do you teach a subject that has no 'right' answers? Philosophical and ethical concepts can be overwhelming to students who have not encountered them before, and complex arguments can be difficult to navigate. John L. Taylor's brand new book will help you to engage your class and have them reading, writing, talking and thinking philosophically. Starting with introductory ideas such as 'a guided tour of philosophy land', the book moves on to: ideas for stimulating and managing student discussions and debates; guidance for effective research; and methods to support students with their essays, presentations and projects. There are also tips for getting the best out of quieter students, and ideas for taking philosophy beyond the classroom. Hashtags and websites providing resources to enliven your classes are included throughout the book. This survey provides a brief and selective overview of research in the philosophy of mathematics education. It asks what makes up the philosophy of mathematics education, what it means, what questions it asks and answers, and what is its overall importance and use? It provides overviews of critical mathematics education, and the most relevant modern movements in the philosophy of mathematics. A case study is provided of an emerging research tradition in one country. This is the Hermeneutic strand of research in the philosophy of mathematics education in Brazil. This illustrates one orientation towards research inquiry in the philosophy of mathematics education. It is part of a broader practice of 'philosophical archaeology': the uncovering of hidden assumptions and buried ideologies within the concepts and methods of research and practice in mathematics education. An extensive bibliography is also included.

In *Children, Religion and the Ethics of Influence*, John Tillson develops a theory concerning which kinds of formative influence are morally permissible, impermissible or obligatory. Applying this theory to the case of religion, he argues that religious initiation in childhood is morally impermissible whether conducted by parents, teachers or others. Tillson addresses questions such as: how we come to have the ethical responsibilities we do, how we understand religion, how ethical and religious commitments can be justified, and what makes children ethically special.

Some students find philosophy engrossing; others are merely bewildered. How can professors meet the challenge of teaching introductory-level philosophy so that their students, regardless of initial incentive or skill, come to understand and even enjoy the subject? For nearly a decade, renowned philosopher and teacher Steven M. Cahn offered doctoral students a fourteen-week, credit-bearing course to prepare them to teach undergraduates. At schools where these instructors were appointed, department chairs reported a dramatic increase in student interest. In this book, Cahn captures the essence of that course. Yet many of the topics he discusses concern all faculty, regardless of subject: a teacher's responsibilities, the keys to effective instruction, the proper approach to term papers, examinations, and grades; and suggestions for how administrators should demonstrate that they take teaching seriously. Such matters are covered in the first seven chapters and in the final, fourteenth chapter. The intermediate six chapters focus on teaching introductory philosophy and, in particular, on critical thinking, free will, philosophy of religion, ethics, and political philosophy. Cahn's writing is lucid and lively, using vivid examples and avoiding educational jargon. In sum, this book is not only a guide on how to inspire students but also an inspiration for teachers themselves.

Informed by the most up-to-date research from around the world, as well as examples of good practice, this handbook analyzes values education in the context of a range of school-based measures associated with student wellbeing. These include social, emotional, moral and spiritual growth – elements that seem to be present where intellectual advancement and academic achievement are being maximized. This text comes as ‘values education’ widens in scope from being concerned with morality, ethics, civics and citizenship to a broader definition synonymous with a holistic approach to education in general. This expanded purview is frequently described as pedagogy relating to ‘values’ and ‘wellbeing’. This contemporary understanding of values education, or values and wellbeing pedagogy, fits well with recent neuroscience research. This has shown that notions of cognition, or intellect, are far more intertwined with social and emotional growth than earlier educational paradigms have allowed for. In other words, the best laid plans about the technical aspects of pedagogy are bound to fail unless the growth of the whole person – social, emotional, moral, spiritual and intellectual, is the pedagogical target. Teachers and educationalists will find that this handbook provides evidence, culled from both research and practice, of the beneficial effects of such a ‘values and wellbeing’ pedagogy.

The first edition of Nel Noddings' *Philosophy of Education* was acclaimed as the 'best overview in the field' by the journal *Teaching Philosophy* and predicted to 'become the standard textbook in philosophy of education' by *Educational Theory*. This classic text, originally designed to give the education student a comprehensive look at philosophical thought in relation to teaching, learning, research, and educational policy, has now been updated to reflect the most current thinking in the field. accessible to students and examines how critical thinking plays a role in light of the new Common Core standards. Philosophy of Education introduces students to the evolution of educational thought, from the founding fathers to contemporary theorists, with consideration of both analytic and continental traditions. This is an essential text not only for teachers and future teachers, but also for anyone needing a survey of contemporary trends in philosophy of education.

Three issues feature as the central themes throughout this book: the nature of social science in general; the nature of educational enquiry in particular; and the links between the language and concepts of research, on the one hand, and those of practice and policy on the other. In analyzing and interrelating these themes, Richard Pring shows their relationship to such central philosophical concepts as meaning, truth, and objectivity. This lucid and ambitious study will be seen as a classic of educational literature. Reviews of the first edition include: "A stimulating and readable book...Pring gives a succinct account of the different philosophical positions and makes a balanced evaluation of their strong and weak points...should be compulsory reading for all trainee teachers let alone educational researchers." -Dr Paul Martinez, Learning and Skills Development Agency Reviews Editor "This volume is a textbook and a manifesto, and research students will welcome the clarity with which the various concepts, tools and approaches are outlined. Most teachers will be stimulated by it." - Times Educational Supplement "Professor Pring's work is far more than the title modestly claims it to be. As much a primer in philosophy of education as a specialist work on the philosophy of educational research it is lucid and concise on topics ranging from the aim[s] of education to the nature of knowledge." - Education Review

The Routledge International Handbook of Research on Teaching Thinking is a comprehensive guide to research on teaching thinking. Teaching thinking is key to growing a more successful economy, is needed for increased democratic engagement and is vital for the well-being of individuals faced with the complexity of a globalised world. However, there are questions about what we mean by 'thinking', how best to teach it and how best to assess it, and it is these questions that this handbook explores and addresses. Containing surveys and summaries of international, cutting-edge research on every aspect of teaching thinking in a range of contexts, the handbook is thorough in its delivery, examining many different approaches and methods to help readers understand what teaching thinking is and how we can best take this movement forward. The Rediscovery of Teaching presents the innovative claim that teaching does not necessarily have to be perceived as an act of control but can be understood and configured as a way of activating possibilities for students to exist as subjects. By framing teaching as an act of dissensus, that is, as an interruption of egological ways of being, this book positions teaching at the progressive end of the educational spectrum, where it can be reconnected with the emancipatory ambitions of education. In conversation with the works of Emmanuel Levinas, Paulo Freire, Jacques Rancière, and other theorists, Gert Biesta shows how students' existence as subjects hinges on the creation of existential possibilities, through which students can assert their "grown-up" place in the world. Written for researchers and students in the areas of philosophy of education, educational theory, curriculum theory, teaching, and teacher education, The Rediscovery of Teaching demonstrates the important role of teachers and teaching in the project

of education as emancipation towards grown-up ways of being in the world. In recent years, new discourses have emerged to inform the philosophy and pedagogy of early childhood. This collection brings together contributions from leading scholars in early childhood education, and each chapter engages with the critical task of reformulating early childhood education and the philosophy of the child with a specific focus on pedagogy. The contributors to *Philosophy and Pedagogy of Early Childhood* explore pedagogy through a philosophical lens, and discuss themes including intersubjectivity, alterity, ethics, and creative experience. Although these themes are addressed in very different ways, each invokes a call to teachers to consider their own position in the dialogical process of learning, and suggests that pedagogy is necessarily situated, provisional, compositional, and discursive. Such critical and philosophical inquiry is a welcome antidote in an era of pedagogical certainty and standards-based agendas. This book was originally published as a special issue of *Educational Philosophy and Theory*.

curriculum, pedagogy, and the role of the school before investigating the various philosophical perspectives that guide and influence educational practices. Classroom vignettes and examples of actual schools and educational programs help to ground philosophical perspectives in real-world scenarios, while the book's unique inquiry-based approach leads students to both think critically about philosophical questions and apply the concepts to their own teaching. Features of the text include: What if questions that structure each chapter to pique students' curiosity, stimulate creativity, and promote critical thinking. Authentic classroom vignettes that encourage students to analyze what it means to "do" philosophy and to reflect upon their own practices, examine their role in the educational process, and articulate their own philosophical beliefs. A concluding section asking readers to imagine and design their own hypothetical school or classroom as a project-based means of analyzing, synthesizing, and evaluating the different philosophies discussed. Accessible and thought-provoking, *Philosophy of Education in Action* provides a dynamic learning experience for readers to understand and apply philosophy in educational practice.

Historical and Philosophical Foundations of Education: A Biographical Introduction, Fifth Edition provides a clear interdisciplinary exploration of the development of educational ideas. The author takes a global perspective on the history and philosophy of education, capturing the essence of educational evolution through the biographies of 23 theorists, philosophers, and educators. This biographical focus, combined with an introductory presentation of the inherent connections between education's major movements and its primary movers, helps students better understand the social and historical conditions that have informed today's educational arena.

Philosophy in schools in Australia dates back to the 1980s and is rooted in the Philosophy for Children curriculum and pedagogy. Seeing potential for educational change, Australian advocates were quick to develop new classroom resources and innovative programs that have proved influential in educational practice throughout Australia and internationally. Behind their contributions lie key philosophical and educational discussions and controversies which have shaped attempts to introduce philosophy in schools and embed it in state and national curricula. Drawing together a wide range of eminent scholars and practitioners in the field of educational philosophy, this anthology, the first of its kind, provides not only a historical narrative, but an opportunity to reflect on the

insights and experiences of the authors that have made history. The collection is divided into three parts. The overarching theme of Part I is the early years of Philosophy for Children in Australia and how they informed the course that the 'philosophy in schools movement' would take. Part II focuses on the events and debates surrounding the development and production of new materials, including arguments for and against the suitability of the original Philosophy for Children curriculum. In Part III, key developments relating to teaching philosophy in schools are analysed. This collection of diverse views, critical appraisals, and different perspectives of historical currents is intended to stimulate thought-provoking questions about theory and practice, and to increase general awareness both nationally and internationally of the maturation of philosophy in schools in Australia. It is also intended to encourage readers to identify emerging ideas and develop strategies for their implementation.

Accountability in Education discusses the debate surrounding the accountability of teachers and questions the responsibility that parents, other groups and even children themselves have for their experience at school. This work provides an overview of the pragmatic understanding of knowledge and the acquisition of knowledge, and its implications for the conduct of educational research. It focuses on the work of John Dewey, and examines the relationship between pragmatism and educational research.

philosophy as a central, integrated part of educational studies. Chapters consider how this decline has impacted teacher education and practice, offering new directions for the reintegration of philosophical thinking in teacher preparation and development. Touching on key points in history, this valuable collection of chapters accurately appraises the global decline of philosophy of education in teacher education programs and seeks to understand the external and endemic causes of changed attitudes towards a discipline which was once assigned such a central place in teacher education. Chapters illustrate how a grounding in the theoretical and ethical dimensions of teaching, learning, and education systems contribute in meaningful ways to being a good teacher, and trace the consequences of a decline in philosophy on individuals' professional development and on the evolution of the teaching profession more broadly. With this in mind, the text focusses on the future of teacher education and considers how we can ensure that philosophy of education feeds into the excellence of teaching today. This book will be of great interest to graduate, postgraduate students as well as research scholars in the field of educational philosophy and history of education. In addition, it will be useful for those involved in teacher education, and in particular, course, module and program development. ubuntu justice through a massive open online course on Teaching for Change. The authors argue that such pedagogic encounters have the potential to stimulate just and democratic human relations: encounters that are critical, deliberate, reflective and compassionate could enable just and democratic human relations to flourish, thus inducing decolonisation and decoloniality. Exploring arguments for imaginative and tolerant pedagogic encounters that could help cultivate an African university where educators and students can engender morally and politically responsible pedagogical actions, the authors offer pathways for thinking more imaginatively about higher education in a globalised African context. This work will be of value for researchers and students of philosophy of education, higher education and democratic citizenship education.

I am delighted to write this book because teachers play a very vital and important role in our life. A good teacher helps us to become good human beings and citizens in our society and the country as a whole. Teachers know that students are the future of any nation so the future development of any nation is in the hands of teachers. There is a core belief behind every educator which is teachers are known to be simply amazing. Teachers inspire people because they impact knowledge and add value to their students' lives and overall, these individuals understand the sacrifice and dedication one must make in order to be successful in the lives they touch. The most common role a teacher plays in the classroom is

to teach knowledge to children and let us always have it in the back of our minds that it is only "In learning you will teach, and in teaching you will learn." The most important role of a teacher is to deliver classroom instruction that helps students by ensuring that students experience academic success and through functioning as surrogate parents, mentors and counsellors, and even almost-politicians since there is almost no limit to the roles a teacher will play. Teachers teach in many ways including lectures, small group activities and hands-on learning activities. Therefore, to achieve all this, there must be some laid down principles that must be followed in order to fully impact the students positively and overall achieve growth and development in the education industry. A typical practice for instructors is to build up a showing logic which causes them to become intelligent specialists all through time on different educating and learning methodologies. A teaching philosophy statement is a narrative that includes your conception of teaching and learning, a description of how you teach and justification for why you teach in a particular way. In other words, your teaching philosophy is a self-reflective statement of your beliefs about teaching and learning. It is a one to two page narrative, which conveys your core ideas about being an effective teacher in the context of your discipline. The thrust of the paper is to critically analyse what is teaching philosophy and its importance to teachers and the educational

sector as a whole. This book will help starting and experienced instructors to improve their teaching abilities by building methods, insight and a formative procedure concentrated on the upgrade for learning. According to Aristotle, "Those who know do, while those that understand teach." I also firmly believe that the most vital and important thing in the world is teaching because the best thing a person can achieve in life is to learn something because it is virtually the only thing which the mind can never overlook, never use up completely, never feel isolated or estranged and will never let you down. This is why Teaching Philosophy is very important to teachers because it enables them to understand the scope and limits of empirical research in education and the relationships between that research and conceptual issues in education thereby making them view and analyse from the perspective of their students. Finally, apart from understanding why students are behaving in a particular way, with Teaching Philosophy teachers would also be able to know how students perceive their actions. As a model in teaching in High school, Colleges or Universities, this book peels back the layers of those conceptual issues in teaching worlds and reveals many surprising findings that will impact you positively because this book has it all."If you have found this book useful, please consider leaving a short review on Amazon."

This anthology opens new perspectives in the domain of history, philosophy, and science teaching research. Its four sections are: first, science, culture and education; second, the teaching and learning of science; third, curriculum development and justification; and fourth, indoctrination. The first group of essays deal with the neglected topic of science education and the Enlightenment tradition. These essays show that many core commitments of modern science education have their roots in this tradition, and consequently all can benefit from a more informed awareness of its strengths and weaknesses. Other essays address research on learning and teaching from the perspectives of social epistemology and educational psychology. Included here is the first ever English translation of Ernst Mach's most influential 1890 paper on 'The Psychological and Logical Moment in Natural Science Teaching'. This paper launched the influential Machian tradition in education. Other essays address concrete cases of the utilisation of history and philosophy in the development and justification of school science curricula. These are instances of the supportive relation of HPS&ST research to curriculum theorising. Finally, two essays address the topic of Indoctrination in science education; a subject long-discussed in philosophy of education, but inadequately in science education. This book is a timely reminder of why history and philosophy of science are urgently needed to support

academic writing and peer review, peer production, collective intelligence, knowledge socialism, openness, open science and intellectual commons. This collection represents the development of the philosophy, methodology and philosophy of collective writing developed in the last few years by members of the Editors' Collective (EC), who also edit, review and contribute to Educational Philosophy and Theory (EPAT), as well as to PESA Agora, edited by Tina Besley, and Access, edited by Nina Hood, two PESA 'journals' recently developed by EC members. This book develops the philosophy, methodology and pedagogy of collective writing as a new mode of academic writing as an alternative to the normal academic article. The philosophy of collective writing draws on a new mode of academic publishing that emphasises the metaphysics of peer production and open review along with the main characteristics of openness, collaboration, co-creation and co-social innovation, peer review and collegiality that have become a praxis for the self-reflection emphasising the subjectivity of writing, sometimes called self-writing. This collection, under the EPAT series Editor's Choice, draws on a group of members of the Editors' Collective, who constitute a network of editors, reviewers and authors who established the organisation to further the aims of innovation in academic writing and publishing. It provides discussion and examples of the philosophy,

emerging issues that have garnered considerable attention like neuroscience, videogames, and radicalization. The collection is relevant for lecturers teaching undergraduate and graduate courses in philosophy of education as well as for colleagues in teacher training. Moreover, it helps junior researchers in philosophy of education to situate the problems they are addressing within the wider field of philosophy of education and offers a valuable update for experienced scholars dealing with issues in the sub-discipline. Combined with different conceptions of the purpose of philosophy, it discusses various aspects, using diverse perspectives to do so. Contributing Editors: Section 1: Voices from the Present and the Past: Nuraan Davids Section 2: Schools of Thought: Christiane Thompson and Joris Vlieghe Section 3: Revisiting Enduring Debates: Ann Chinnery, Naomi Hodgson, and Viktor Johansson Section 4: New Areas and Developments: Kai Horsthemke, Dirk Willem Postma, and Claudia Ruitenberg

Now in its ninth edition, *Philosophical Foundations of Education* provides readers with comprehensive knowledge about the various schools of thought that have comprised the philosophy of education throughout history. Highly readable, this chronological text gives insight into the individuals who helped develop various philosophies of education and provides historical information about how they lived and how they learned. In addition, each chapter covers each philosophy's

aims, methods, curriculums, teaching roles, advantages, and disadvantages. Covering not only how each philosophy evolved over time but also how these philosophies influenced subsequent educational practice, this popular textbook also challenges readers to apply what they have learned in their own profession and develop their own philosophies about education, instruction, and schooling. *Philosophy and Theory in Educational Research: Writing in the margin* explores the practices of reading and writing in educational philosophy and theory. Showing that there is no 'right way' to approach research in educational philosophy, but illustrating its possibilities, this text invites an engagement with philosophy as a possibility – and opening possibilities – for educational research. Drawing on their own research and theoretical and philosophical sources, the authors investigate the important issue of what it means to read and write when there is no prescribed structure. Innovative in its contribution to the literature, this edited volume enlightens readers in three ways. The volume focuses on the practices of reading and writing that are central to research in educational philosophy, suggesting that these practices constitute the research, rather than simply reporting it. It is not a prescriptive guide and should not be read procedurally. Rather, it is intended to illustrate the possibilities for this kind of research, and to suggest starting points for those pursuing research projects.

Finally, attention is given to the ways in which conducting educational philosophy can be educative in itself, both to the researcher in writing it, and to its audience in reading it. With contributions from international scholars in the field of educational philosophy, this book is a valuable guide for practitioner-researchers, taught postgraduate and doctoral students, and early career researchers in university education departments. Academic staff teaching research methods and seeking to introduce their students to philosophy-as-research without wishing to offer a prescriptive 'how to' guide will also find this book of particular interest. This comprehensive handbook provides counselors in training, counselor educators, and professional counselors with the latest information on major contemporary issues impacting the field. The design of the book is both conceptual and practical, reflecting current trends and issues from the perspective of expert counselor educators, and provides an up-to-date discussion of the importance of multicultural awareness and skills. The book is split into helpful sections covering a range of areas including social and cultural diversity, neuroscience, risk prevention in counseling, writing and publishing research, and career development. Grounded in contemporary research and aligned with the 2016 CACREP core content areas, the Handbook of Counseling and Counselor Education is an indispensable resource for both graduate-level trainees and

professional counselors alike.

Combining contributions from international academics and practitioners, this new text develops students' ability to philosophise as well as learn about philosophy and education. It considers issues concerned with the interface between education and wider society but goes beyond this to explore education and philosophy at a micro level: the teacher–learner relationship. It challenges and empowers students to use philosophy as a tool within education, as a set of theories to understand education and as a potential means to develop solutions to problems as they occur within practice. Assuming no pre-existing philosophical background, *Philosophy and the Study of Education* explores complex topics including: encouraging young people to criticise and challenge all authority; the limits of a religious-based education; the desire for 'alternative facts' or 'truths'; the second-class status of vocational pursuits; the inherent struggle in the teacher–student relationship; the relationship between emotion, morality and autonomy in teaching. Including discussion questions and further recommended reading, this thought-providing book will support and inspire all those on Education Studies, Childhood Studies and Youth Studies courses in developing a critical perspective and understanding the true value of philosophy within education.
