Creatures sprint, slither, and soar in this STEM-driven dive into the extraordinary, everyday ways animals move! A squid jets through the ocean like a rocket. A cheetah races after a zig-zagging gazelle. A fishing spider walks on water with its eight hairy legs. All animals must move. Whether on the hunt for something to eat, on the run from being eaten, or in search of a mate or a safe place to live, their lives depend on marvelous motion. In this fascinating introduction to biomechanics, seasoned non-fiction writer Galadriel Watson draws on biology, physics, and other sciences to show readers the incredible ways a variety of creatures move to meet their everyday needs--and overcome the physical forces working against them. An accessible, lively style and dynamic design will keep readers engaged, while Samantha Dixon's energetic illustrations and mechanical diagrams reinforce STEM concepts on each spread.

While the theories of Matte Blanco about the structure of the unconscious and the way in which it operates are generally recognised to be the most original since those of Freud, for many people the ways in which his ideas are expressed, including the use of terminology from mathematics and logic, make them difficult of access. Eric Rayner has written the first clear introduction to Matte Blanco's key concepts for psychotherapists and psychoanalysts and all those concerned with moving psychoanalytic thinking forward. He sets out the central ideas in a way which is easy to understand and then shows, with examples, how they relate to clinical practice. He also describes how the ideas are related to those of people in other disciplines - mathematics, logic, psychology (specifically Piaget), and anthropology, among others. Drawing on the work of a group of people who have been inspired by Matte Blanco's thinking to extend their own ideas and test them out in the consulting room, this book reveals the significance of Matte Blanco's thought for future research.

It's not so bad living a dog's life. Unless you're a cat. Most times, hanging out with Rotten Willy (the huge dog on the cover) was cool. We played chase, talked, and chowed down on spaghetti and meatballs at Luigi's restaurant. Even though he was a dog (and sometimes called me Upchuck instead of Chuck), I could handle it. He was my best friend. Then this baseball stuff started and Willy went bonkers. I never

saw him act so crazy. On top of that, these two new cats moved into our neighborhood. Trouble was, tough-guy Roscoe and his cute fuzzy sister, Rikki, did not like dogs. Dogs belong with dogs and cats belong with cats, they said. I was showing them the sights when I suddenly spied the dogcatcher, just waiting to trap Willy as he raced across the field with a baseball in his mouth. But Roscoe and Rikki would never understand if they found out my best friend was a dog. How could I save Willy before it was too late? What's a cat to do when he has to choose between old friends and new -- and there's no time to lose...

This book presents the gatherings of the "2016 International Conference on Water Resource and Hydraulic Engineering," which primarily focused on the sustainable development of water resources and the environment in both China and the United States. The respective papers cover a wide variety of research areas, including watershed hydrology; river hydraulics; groundwater hydrology; water resources management and sustainability development; water supply planning under climate change; water quality analysis and water pollution; sponge city development and urban watershed management; environment and sustainability; global connections between air and water; and irrigation and drainage issues for agricultural engineering.
