Reading an ECG is not an easy task and the interpretation of the data can vary from one person to another. There are a host of ECG books on the market which give simplistic advice, but very few which offer the necessary content for a clinical textbook on the subject - namely, illustrations, case studies and a concise but detailed explanation of ECGs when applied to the various circumstances of abnormal heart conditions. The use of electrocardiography has now become commonplace when diagnosing cardiac problems. This book deals with all known heart conditions, but in particular there are valuable chapters on stress and ambulatory electrocardiography, pacemakers, conduction defects, pre-arrest arrhythmias and cardiac resuscitation, following guidelines laid down by the British and European Resuscitation Council. It is primarily intended for postgraduate students and clinicians in practice, but students who intend to pursue further study in cardiology will also find it very useful.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by

social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.
