This document's purpose is to spell out the Church's understanding of the nature of revelation--the process whereby God communicates with human beings. It touches upon questions about Scripture, tradition, and the teaching authority of the Church. The major concern of the document is to proclaim a Catholic understanding of the Bible as the "word of God." Key elements include: Trinitarian structure, roles of apostles and bishops, and biblical reading in a historical context.

Over my lifetime, I have discovered that simplicity and depth go together. Dietrich Schindlers book, *Profound*, masterfully contains both. It is a seminal primer of serious reflection about some of lifes most basic questions. Timeless and timely, this book deftly quotes some of the best ancient and modern sources. As I read each chapter in sequence, I wondered if the next chapters could be as good as the ones I had already read. My imagination said no, but as I continued reading, reality said yes! I highly recommend this book for all thinkers, both Christian and non-Christian alike. George W. Murray, Chancellor, Columbia International University

Asking key questions about how policies and systems impact on children's early years and rethinking the ways in which young children's learning and development becomes integral to policy, this insightful text challenges the common misconception that policy development and pedagogical implementation are separate endeavours. *Challenging the Intersection of Policy with Pedagogy* explores symbiotic dynamics between policy and practice in the early years to consider the implications of policies relating to documentation, professional well-being, mentoring, the role of the family, language development and diversity. Written to provoke group discussion and extend thinking, opportunities for international comparison, points for reflection and editorial provocations will help students, educators, integrated service providers and policy makers engage critically with a variety of understandings of how policy and practice interact. Considering the role of learning environment, the practitioner, the wider community and policy, chapters are divided into four key sections which reflect major influences on practice and pedagogy: Being alongside children Those who educate Embedding families and communities Working with systems Considering diverse settings and contexts, perspectives, policies and systems, this text will enhance understanding, support self-directed learning and provoke and transform thinking at both graduate and postgraduate levels, particularly in the field of early childhood education and care.

A fascinating look at Artificial Intelligence, from its humble Cold War beginnings to the dazzling future that is just around the corner. When most of us think about Artificial Intelligence, our minds go straight to cyborgs, robots, and sci-fi thrillers where machines take over the world. But the truth is that Artificial Intelligence is already among us. It exists in our smartphones, fitness trackers, and refrigerators that tell us when the milk will expire. In some ways, the future people dreamed of at the World's Fair in the 1960s is already here. We're teaching our machines how to think like humans, and they're learning at an incredible rate. In *Thinking Machines*, technology journalist Luke Dormehl takes you through the history of AI and how it makes up the foundations of the machines that think for us today. Furthermore, Dormehl speculates on the incredible--and possibly terrifying--future that's much closer than many would imagine. This remarkable book will invite you to marvel at what now seems commonplace and to dream about a future in which the scope of humanity may need to broaden itself to include intelligent machines.
