It has become a powerful tool for participating in the global economy and for offering new opportunities for development efforts. ICT can and should advance economic growth and reduce poverty in developing countries. It has been 20 years since the first telephone operator was privatized, a little over 10 since the World Wide Web emerged, and 5 since the telecommunications bubble burst. How have the ICT sector and its role in development evolved? What have we learned? How can we move forward? Information and Communications for Development 2006: Global Trends and Policies contains lessons from both developed and developing countries. It examines the roles of the public and private sectors, identifying the challenges and the benefits of adopting and expanding ICT use. The report assesses topics essential to building an information society, including investment, access, diffusion, and country policies and strategies. Assessing what has worked, what hasn't, and why, this report is an invaluable guide for understanding how to capture the benefits of ICT around the world."

Astronomy, Papyrus, and Covenant is the third volume in the FARMS series and includes papers from a recent conference on the subject. Rather than focus on biblical interpretations of Abraham, each chapter instead explores a lesser-known aspect of Abrahamic studies: his startling visions of the heavens, comparisons between the Book of Abraham and other ancient texts, such as the Dead Sea Scrolls, and an investigation into shifting interpretations of Abraham throughout nineteenth-century America. The compilation is an excellent introduction to recent scholarship on the subject and will prove to be fascinating reading.

This Brief focuses on strategies for innovation. Top-Down Innovation discusses the barriers to successful organizational and product innovation, distills the leading theories about how to foster innovation, and presents six case studies of well-known brands that have succeeded (and in one case failed) in meeting innovation challenges. Synthesizing the lessons learned from companies that have mastered innovation over time, it provides a new perspective on the role of market-leading companies and top management in driving innovation. Since the publication of Clayton Christensen's pioneering Innovator's Dilemma in 1997, the rules of innovation have themselves been transformed. Today, innovation frequently starts at the CEO level with a vision that percolates throughout the organization. In contrast to traditional theories of technology disruption, new market entrants, and business model innovation, this study concludes that vision and leadership at the top is a decisive factor in successful innovation initiatives.

If, as many argue, movies and television have become Western culture's premier storytelling media, so too have they become, for most members of society, the primary source of encounters with the natural world—particularly wild animals. The television fare offered nightly by national and cable networks such as PBS and the Discovery Channel provides millions of viewers with their only experience of the wilderness and its inhabitants. The very films that so many viewers take as accurate portrayals of wildlife, however, have evolved primarily as a form of entertainment, following the established codes and conventions of narrative exposition. The result has been not the representation of nature, but its wholesale reconstruction and reconfiguration according to film and television conventions, audience expectations, and the demands of competition in the media marketplace. Wildlife Films traces the genealogy of the nature film, from its

origins as the "animal locomotion" studies that mark the very beginnings of motion pictures themselves, to the founding of the Animal Planet cable channel that boasts "all animals, all the time." The narrative and thematic elements that unite wildlife films as a genre have their roots not in the documentary film tradition, but in the older traditions of oral and written animal fables as reflections of human society. Derek Bousé contends that classic wildlife films often portray animal protagonists living in families modeled on an ideal of the human nuclear family and working in communities that resemble an ideal of bucolic human society. In these stories—presented as documentaries—animals are motivated by human emotions and conduct relationships according to human customs. This imposition of culturally satisfying narrative patterns upon the lives of animals has not only led to the misrepresentation of the natural world; it has promoted the notion that our values, our moral vision, our models of society and family structure derive from nature, rather than being cultural formations.
