I was at my wit's end. I'd had enough of this job, this life, and my relationship had broken up. Should I eat chocolate, or go to India, or fall in love? Then I had a revelation: Why not do all three, in that order? And so it was that I embarked on a journey that was segmented into three parts and was then made into a major motion picture. Later, I woke up on an airplane with a hole in my face and a really bad hangover. I was ushered brusquely off the plane by my parents who took me to a rehab where I tested positive for coke, classic coke, special k (the drug), Special K (the cereal), mushrooms, pepperoni, and Restless Leg Syndrome. It was there that I first began painting with my feet. But rewind...the year was 1914. I was just a young German soldier serving in the trenches while simultaneously trying to destroy an evil ring with some help from an elf, a troll, and a giant sorcerer, all while cooking every recipe out of a Julia Child cookbook. What I'm trying to say is that there was a secret code hidden in a painting and I was looking for it with this girl who had a tattoo of a dragon! Let me clarify, it was the 1930s and a bunch of us were migrating out of Oklahoma, and I was this teenage wizard/CIA operative, okay? And, um then I floated off into the meta-verse as a ball of invisible energy that had no outer edge... Ugh, okay. None of this is true. I'm just kind of a normal guy from New Jersey who moved to New York, got into comedy, wrote this book about trying to write this book, and then moved to Alaska, became the mayor of a small town, spent \$30,000 on underwear, and now I'm going to rule the world!!!

Management and legal counsel of foreign companies operating in China as well as those outside China with Chinese business desperately need to keep up with the fast-paced antitrust developments in the most dynamic market in the world. The author of this book, Becky Koblitz, is a seasoned antitrust lawyer for a major U.S. law firm in Beijing. She has decades of legal experience as a prosecutor at the Antitrust Division of the U.S. Department of Justice, as well as in-house counsel for a German subsidiary of a major American real estate development company and as a lawyer at law firms globally. Her rich experience in the U.S., Europe and China, now often regarded as the three centers of global antitrust, makes her the perfect candidate to write a book on China's antitrust development. Her book is a quick read that tells what there is to know about China's antitrust enforcement and includes practical advice and examples for the various aspects of antitrust: dealing with competitors, dealing within the supply chain, mergers, etc. She writes in a straight-forward language such that non-antitrust lawyers can get beyond stock phrases like "illicit price coordination," "abuse of dominance," or "unilateral effect." Her book is a valuable and practical "cookbook" for antitrust compliance training and beyond. Another feature of the book is that it provides both legal and economic perspectives on antitrust analysis in China, which is important given that economic analysis is increasingly adopted by China's antitrust agencies and the Chinese courts. Thus understanding the logic and methodology behind economic analysis as applied to Chinese cases is key to conducting proper antitrust legal analysis that is tailored to the Chinese context. To write a book on the burgeoning antitrust enforcement and practice for the constantly evolving Chinese market is a real challenge. The trick, and it is not as easy as you would think, is to write simple declarative sentences, understandable to the antitrust layman, and at the same time not lose the rigor of antitrust analysis. I think this relatively short book is a remarkable achievement in meeting such a challenge, but I invite you to judge for yourself.

Written from the perspective of an experienced commentator on Korean and global business, this book presents not simply a narrative or an adulatory and uncritical account of Samsung's rise, but a considered analysis of the secrets of success that both business students and CEOs will want to read and consider applying to their own companies. As corroborated by the never-sagging and even increasing interest within the last decade, the intuitive attraction of "True 3D" in geodata presentation is well worth covering its current status and recent developments in a compendium like the present one. Theory is treated as well as are many fields of concrete applications. Displays for big audiences and special single-user applications are presented, well-established technologies like classical manual fabrication of landscape reliefs contrast with cutting-edge developments
