Anyone who relies upon a word processor to produce documentation relating to healthcare must have a dependable medical spellchecker. This audience, while incredibly broad in its potential, primarily includes medical transcriptionists, medical records departments, medical editors and writers, academics, physicians, researchers, and healthcare professionals. In most of these fields, accuracy of the written word is mandatory: an inaccurate representation of medical terminology in medical documentation can lead to legal action, errors in medical practice, and errors in coding and reimbursement. In addition, no other discipline has such a dynamic, expanding language base, as new terms are rapidly introduced and constantly evolving. With this knowledge, it is easy to understand why Stedman's Plus Medical/Pharmaceutical Spellchecker is LWW's highest-revenue generating software product, and MLR's highest-generating annual product. In 2006, Stedman's Plus sold over \$2.5 million (which does not include revenue booked through Rights, Licensing and Permissions group). In 2007, Stedman's Plus 2006 has sold \$900K million (04.07 YTD) which does not include revenue booked through Rights, Licensing and Permissions group.

The Federal Government's current information technology environment is characterized by low asset utilization, a fragmented demand for resources, duplicative systems, environments which are difficult to

manage, and long procurement lead times. These inefficiencies negatively impact the Federal Government's ability to serve the American public.

Making a Good Life takes a timely look at the ideas and values that inform how people think about reproduction and assisted reproductive technologies. In an era of heightened scrutiny about parenting and reproduction, fears about environmental degradation, and the rise of the biotechnology industry, Katharine Dow delves into the reproductive ethics of those who do not have a personal stake in assisted reproductive technologies, but who are building lives inspired and influenced by environmentalism and concerns about the natural world's future. Moving away from experiences of infertility treatments tied to the clinic and laboratory, Dow instead explores reproduction and assisted reproductive technologies as topics of public concern and debate, and she examines how people living in a coastal village in rural Scotland make ethical decisions and judgments about these matters. In particular, Dow engages with people's ideas about nature and naturalness, and how these relate to views about parenting and building stable environments for future generations. Taking into account the ways daily responsibilities and commitments are balanced with moral values, Dow suggests there is still much to uncover about reproductive ethics. Analyzing how ideas about reproduction intersect with wider ethical struggles, Making a Good Life offers a new approach to researching, thinking, and writing about nature, ethics, and reproduction.

"Rapid advances in financial technology are transforming the economic and financial landscape, offering wide-ranging opportunities while raising potential risks. Fintech can support potential growth and poverty reduction by strengthening financial development, inclusion, and efficiency—but it may pose risks to consumers and investors and, more broadly, to financial stability and integrity. National authorities are keen to foster fintech's potential benefits and to mitigate its possible risks. Many international and regional groupings are now examining various aspects of fintech, in line with their respective mandates. There have been calls for greater international cooperation and guidance about how to address emerging issues, with some also cautioning against premature policy responses. In response to these calls from member countries, the IMF and the World Bank staff have developed the Bali Fintech Agenda, summarized in Annex I of this paper. The Agenda brings together and advances key issues for policymakers and the international community to consider as individual countries formulate their policy approaches. It distills these considerations into 12 elements arising from the experiences of member countries. The Agenda offers a framework for the consideration of high-level issues by individual member countries, including in their own domestic policy discussions. It does not represent the work program of the IMF or the World Bank, nor does it aim to provide specific guidance or policy advice. The Agenda will help guide the focus of IMF and World Bank staff in their work on fintech issues within their expertise and mandate, inform their dialogue with national authorities, and help shape their contributions to the work of the standard-setting bodies and other relevant international institutions on fintech issues. Implications for the work programs of the IMF and World Bank will be developed and presented to their respective Executive Boards for guidance as the nature and scope of the membership's needs—in response to the Bali Fintech Agenda—become clearer."
