The media continue to have a significant persuasive influence on the public perception of crime, even when the information presented is not reflective of the crime rate or actual crime itself. There have been numerous theoretical studies on fear of crime in the media, but few have considered this from a social psychological perspective. As new media outlets emerge and public dependence on them increases, the need for such awareness has never been greater. This volume lays the foundation for understanding fear of crime from a social psychological perspective in a way that has not yet been systematically presented to the academic world. This volume brings together an international team of experts and scholars to assess the role of fear and the media in everyday life. Chapters take a multidisciplinary approach to psychology, sociology and criminology and explore such topics as dual process theory, construal level theory, public fascination with gangs, and other contemporary issues.

The Buddha and His Dhamma was B.R. Ambedkar's last work. Published posthumously, it presented a radical reorientation of Buddhist thought and literature, aptly called navayana. It deals with Ambedkar's conceptualization of Buddhism and the possibilities it offered for liberation and upliftment of the Dalits. It presents his reflections on the life of the Buddha, his teachings, and the spread

of Buddhism by interweaving anecdotes with detailed analyses of the religion's basic tenets. The author also includes important elements of the Buddhist canon and tradition to make the teachings more accessible. In the first critical and annotated edition of this work, the editors address the on-going debate on Ambedkar's interpretation of the Buddha's dhamma by focusing on the accuracy of his citations and providing missing sources. They also discuss Ambedkar's modification of source materials. The introduction contextualizes the scholarly work related to the text.

Ambedkar was a prolific student, earning doctorates in economics from both Columbia University and the London School of Economics, and gained a reputation as a scholar for his research in law, economics and political science. In his early career he was an economist, professor, and lawyer. His later life was marked by his political activities; he became involved in campaigning and negotiations for India's independence, publishing journals, advocating political rights and social freedom for Dalits, and contributing significantly to the establishment of the state of India. In 1956 he converted to Buddhism, initiating mass conversions of Dalits.

Former chief CNN India correspondent and award-winning journalist Ravi Agrawal takes readers on a journey across the Subcontinent, through its remote rural villages and its massive metropolises, seeking out the nexuses of change created by smartphones, and with them connection to the internet. As always with India, the numbers are staggering: in 2000, 20 million Indians had access to the internet; by 2017, 465 million were online, with three Indians discovering the internet every second. By 2020, India's online community is projected to exceed 700 million, and more than a billion Indians are expected to be online by 2025. In the course of a single generation, access to the internet has progressed from dial-up connections on PCs, to broadband access, wireless, and now 4G data on phones. The rise of low-cost smartphones and cheap data plans has meant the country leapfrogged the baby steps their Western counterparts took toward digital

fluency. The results can be felt in every sphere of life, upending traditions and customs and challenging conventions. Nothing is untouched, from arranged marriages to social status to business start-ups, as smartphones move the entire economy from cash-based to credit-based. Access to the internet is affecting the progress of progress itself. As Agrawal shows, while they offer immediate and sometimes mind-altering access to so much for so many, smartphones create no immediate utopia in a culture still driven by poverty, a caste system, gender inequality, illiteracy, and income disparity. Internet access has provided greater opportunities to women and changed the way in which India's many illiterate poor can interact with the world, but it has also meant that pornography has become more readily available. Under a government keen to control content, it has created tensions. And in a climate of hypernationalism, it has fomented violence and even terrorism. The influence of smartphones on "the world's largest democracy" is nonetheless pervasive and irreversible, and *India Connected* reveals both its dimensions and its implications.

A contemporary interpretation of the foundational text for the practice of yoga. Patañjali's Yoga Sutra (second century CE) is the basic text of one of the nine canonical schools of Indian philosophy. In it the legendary author lays down the blueprint for success in yoga; now practised the world over. Patañjali draws upon many ideas of his time; and the result is a unique work of Indian moral philosophy that has been the foundational text for the practice of yoga since. The Yoga Sutra sets out a sophisticated theory of moral psychology and perhaps the oldest theory of psychoanalysis. For Patañjali; present mental maladies are a function of subconscious tendencies formed in reaction to past experiences. He argues that people are not powerless against such forces and that they can radically alter their lives through yoga—a process of moral transformation and perfection; which brings the body and mind of a person in line with their true nature. Accompanying this illuminating translation is an extended introduction that explains the challenges of accurately translating Indian philosophical texts; locates the historical antecedents of Patañjali's text and situates Patanjali's philosophy within the history of scholastic Indian philosophy.

Although scientific models and simulations differ in numerous ways, they are similar in so far as they are posing essentially philosophical problems about the nature of representation. This collection is designed to bring together some of the best work on the nature of representation being done by both established senior philosophers of

science and younger researchers. Most of the pieces, while appealing to existing traditions of scientific representation, explore new types of questions, such as: how understanding can be developed within computational science; how the format of representations matters for their use, be it for the purpose of research or education; how the concepts of emergence and supervenience can be further analyzed by taking into account computational science; or how the emphasis upon tractability--a particularly important issue in computational science--sheds new light on the philosophical analysis of scientific reasoning.

Predators are hunters from another world, physically superior, possessing lethal alien technology, capable of hiding in plain sight. Throughout our history, Predators have used Earth as their own private hunting ground, and their prey is Man.

Never in human history was there such a chance for freedom of expression. If we have Internet access, any one of us can publish almost anything we like and potentially reach an audience of millions. Never was there a time when the evils of unlimited speech flowed so easily across frontiers: violent intimidation, gross violations of privacy, tidal waves of abuse. A pastor burns a Koran in Florida and UN officials die in Afghanistan. Drawing on a lifetime of writing about dictatorships and dissidents, Timothy Garton Ash argues that in this connected world that he calls cosmopolis, the way to combine freedom and diversity is to have more but also better free speech. Across all cultural divides we must strive to agree on how we disagree. He draws on a thirteen-language

global online project—freespeechdebate.com—conducted out of Oxford University and devoted to doing just that. With vivid examples, from his personal experience of China's Orwellian censorship apparatus to the controversy around Charlie Hebdo to a very English court case involving food writer Nigella Lawson, he proposes a framework for civilized conflict in a world where we are all becoming neighbors.
